Well... I look at it this way, the CBRS class license dictates certain
rules of engagement. Dedicated CB sets are of course programmed and
hard-wired to ensure most of these are met (there are some rules that
hardware can't stop from being broken; playing music or abusing people
on air for example). So long as a ham set is set up to operate the
same way... I don't see a problem.

Rules as I understand them in Australia:
- HF CB: 6W AM or 12W SSB PEP transmit power around 27MHz. There's a
strict channel spacing to observe -- some of these channels are

reserved for emergency use and other purposes.
- UHF CB: 5W FM between 476.5MHz and 477.5MHz. Again, strict channel
spacing (25kHz). Channels 1-8 channels are reserved for repeater
outputs, but may be used for simplex if no repeater is operating on
those channels. Channel 11 is the calling channel (basically, make
contact then QSY). Channels 31-38 are reserved for repeater inputs,
but may be used for simplex if no repeater is operating there.
Channel 5 and 35 are reserved for emergency use. Channels 22 and 23
are for data communications only -- no voice. Maximum continuous
transmit time: 3 minutes.

It was very easy to get the KG-UVD1Ps to comply with the UHF CB
requirements... Just set the step to 25kHz, work your way through all
40 channels, then for the repeaters -- set it to a +750kHz offset.
The units only do 4W on UHF, and the timeout timer is adjustable -- so
I set it for 150 seconds, which works nicely with the majority of
amateur repeaters too.

Sadly, the things don't have enough memory channels for VHF marine as
well, because the transmitter in them is capable of that too.

Yeah, my old Kenwood used to stop short at 470MHz... that's the
highest I've heard of. Likewise with my FT-897D (which is due for
replacement due to storm damage). So I strongly suspect we'll have to
settle for two radios... one dedicated for UHF CB, and the other to do
everything else.

That is interesting, I would have thought they'd be straight DSB-FC
(regular "AM"). The carrier is adjustable on the FT-897D (and most
likely the '8[15]7 too) so I could bump that up if needed... but this
is one factor I hadn't considered.

Yep, he's looking at getting an amateur license though at some
point... and if I'm there, we'll be using it as an amateur set. I
suspect if one were to draw attention to themselves, the authorities
will come knocking -- don't give them a reason to show up, and
everything should be okay.

He he... yeah... I've gone one step further -- using solar and batteries to power my radios now. So that's one less bit of wire that lightning can come in on. The experience has taught me the diligence to unplug the rest.

> Presently I do not have enough smarts to make an intelligent

Indeed. I haven't looked at any of the Elecraft radios, my decision was between the Icom IC-706MkII G, the Yaesu FT-857D and Yaesu FT-897D. I wound up going for the latter because above all, I wanted a radio that I could take with me portable, or stick in the rear basket/luggage rack on my bike for bicycle mobile operation.

I rejected the Icom in the end on two grounds:
(1) Having used one during last year's JOTA... I found it difficult to access what I considered, very rudimentary controls. I found its menus awkward to use. I dare say it'd be better if I had the time to read the manual more carefully, but that was my experience.
(2) Its small size meant it could not efficiently dissipate heat. This meant the radio was prone to overheating problems. (I suspect the FT857 would suffer this too.)

The '897 had two nice features: I could embed two batteries inside with a combined 9Ah capacity, and there were two auto-tuners on the market that could bolt onto the side. So I'd be able to pick up one unit, and have almost a complete radio station -- just add antenna and microphone. For the antenna, a squid pole works nicely, can be set up almost anywhere and is lightweight. A dipole is also pretty easy to carry and set up. So for a portable rig, the '897 was ideal.

My only gripe is that Yaesu for some reason decided that it would use NiMH cells in its battery packs... Li-ion would have been lighter and higher density. Heaven forbid, gel-cell batteries would do better than NiMH! But that's the choice they went with, and we all have to live with it.

I think the real questions are:
(1) How often are you going to use it portable/mobile? (For me, I'd was using my '897D portable at least once a week... and when my handheld died -- I was using it mobile daily -- even on public transport.)
(2) What bands are you likely to use? The K3 offers up to 6m with a 2m option, the '897D offers up to 70cm as standard. (I use 2m a _lot_)

I agree that we have to try to anticipate our needs.

The all-in-one rigs offer   *so*   many great features that it is
downright befuddling trying to take advantage of all the features,
in one lifetime.

In the end, emotions and expectations affect a lot of us when it comes to these purchases, rather than hard facts.

However, I *will* say that rig performance in a crowded band can reveal a lot about the quality of one rig versus another.

That is why I have an emotional attachment to QRP rigs, particularly CW QRP rigs, using exotic methods to fish out very weak signals in a crowded environment. Fun, fun, fun.

I expect it is a lot more difficult to fish out a weak SSB signal. <g>

Wonder if any hams are experimenting with liquid nitrogen cooled RF front ends to their rigs, to reduce thermal noise.

Getting back to reality for a moment, I have almost decided to base my personal choice on whatever rig has the best receiver for weak CW signals, in a crowded band.

If all rigs are essentially equal in this respect, then I get to consider _other_ aspects of their performance.

If one rig stands out head and shoulders above others for CW work, then I would be strongly tempted to favor that rig.

(assuming of course diversity antennas to minimize fading)

Playing with CW is just a personal choice, in my case.

Mark

With the high background noise floor already present on Earth, would he few tenths of a dB or so of thermal noise reduction from cryocooling make any perceptible or significant difference? Above HFis a different story, I think, but the noise floor on HF -- at least around here -- is really rottenly high.

Yeah, guess you are correct, not to even mention the RF
coming in from the cosmos, let alone man-made RF.

Okay, time to break out my next hare-brained idea,
short million-watt pulses, bounced off all the space junk
we have floating around.

Lemme see, one-watt input, pulse length a billionth of
a second, one thousand pulses per second.

Hmm, where is the FCCs phone number, now all we have to
decide on is what frequency to use.   Very low infrared band not
being used for anything right now, I could mount an infrared
window in my roof, and let a Yaesu modulated laser handle the rest.

Now ya see what happens when an old ham is away from his ARRL
handbook for 55 years.

Mark

> live with it.

It's because lithium cells are a disaster waiting to happen. If you charge them improperly they will catch fire. If you discharge them to "empty" they are permanently dead.

They also die after around 300 charge cycles. ANY power put in is a charge cycle, so laptops made in the last couple of years will no longer "float" a lithium battery. They let it discharge to at least 95% left before recharging it.

The latest NiMH batteries will go through 1000 cycles. Compared to litium batteries they are bulletproof. They are also a lot cheaper.

The main reason they are so common is that people don't understand their problems and like them because they are so light in comparison to NiMH cells. The lightness disapears when you find out a 450mAH battery will be trash if you use it anywhere near that amount.

BTW, they are dangerous corosive trash, much worse than NiMH cells.

Companies like them because they can claim the device has a long battery life, low weight and in 6 months to a year be back buying a new battery. Since the battery is proprietary at best and permanently installed at worst it's a win win for them either way.

The bigest problem I have with NiMH batteries is that they no longer sell large size batteries to the general public. Yes you can get real C or D cells from battery specialists (which are rare here), but generally all you can get is AA batteries or C or D cells which are just sleeved AA cells (with the corresponding capacity).

I would not mind if I could get the sleeves, but no one carries them here. :-(

After all, in my 290RII which takes a lot of C cells, sleeved AA batteries with 2700mAh capacity would far out last the NiCad ones I had in it.

Maybe forehead above, but certainly not head and shoulders. One receiver test does not make a radio and many people prefer the Ten-Tec to the K3.

It's a matter of taste, ergonomics and what you want to do with the radio.
If you like full QSK, the older Ten-Tec and Drake rigs with their almost noiseless receviers, exact PTO tuning, and "good sound" are more comfortable in a relatively empty band.

Being able to extract that one weak signal in a pile-up is a different matter, but many people don't care to. I would not want to spend an entire afternoon listening to a 250Hz filter, no matter what it was made of (crystal, mechaincal, digital, etc). Someone else might.

Geoff.

I must admit, I was overwhelmed by the technical
terms in that website.

Are there any books that explain the practical
significance of those terms as applied to rating
one rig higher than another rig for a particular
purpose or use?

I somehow doubt if the ARRL handbook will go into
enough detail about those terms.

I realize that all-in-one rigs are a compromise,
some manufacturers favor one use over another.

Imagine the extreme difficulty of building a rig from
scratch, trying to build one that has all the features of
a commercial rig.

What surprises me is that all the commercial names that
I recognize from 55 years ago are still in business. <g>

Good Grief, do they still sell the Ten-Tec, I used to own one
in the old days, a nice little full break-in rig.

What! - watch it, that would be heaven for me ;-)

Of course I would demand a few modern touches, such as automatically generating morse code by first speaking into a microphone and converting my voice to text, (very easy to do, BTW, using modern speech recognition software, like "MacSpeech" for the Mac, or "Dragon NaturallySpeaking" on a Windows computer) - then feeding that text into a device that would change the text into morse code and store it temporarily in a computer buffer - - - to be dumped into the xmtr at a touch of a button for morse-code transmission to the distant station.

I fantasize about finding a device that will change morse code into text, because modern computers can easily change text to an artificial voice, which nowadays sounds exactly like a real person.

Perhaps the very high speed "burst" guys (RTTY?) know of such a device.

As regards listening to the high-pitched hiss of a narrow CW filter, seems to me in the old days that I kinda got around that by first using a somewhat wider filter, like 500Hz, then shutting off my receivers BFO entirely. (is shutting off the BFO still possible on modern CW rigs?)

Then I would fire up a small independent BFO I kept on the table next to my rig, to generate the necessary audio signal for my ears.

The independent BFO was extremely weak by design, so that any strong CW signal next to the weak one was reduced to the same weak audio.

Mark

Ten-Tec is alive and well, still selling ham rigs. Their current top of the line the Orion II is as good as or better than the K3, depending upon whom you ask. I've never used either, so I am not one to ask. :-)

Their older rigs still work, Ten-Tec still fixes them when they can, and just recently stopped selling the manuals and now has them online for free download.

There may be some changes coming, the head of the ham radio division just left. He bought Vibroplex, is moving the company to where he lives and will run it. There were some joint Ten-Tec Vibroplex projects in the past if I remember correctly, maybe there will be more.

How long has it been since you've been on the air? It may not be as wonderful as your memories. If it is, good there are plenty of rigs with filters like that out there for you to buy. There are also DSP audio filters to add on as you please.

Sure but why? Why not just use SSB.

> I fantasize about finding a device that will change

> which nowadays sounds exactly like a real person.

My AEA Morse Machine 3 did that, I expect there are programs around to do that. Come to think of it so did my PK-232. My guess is that there are a lot of people out there using such devices (keyboards to morse and morse to ascii) than you would think. It's easy to tell the spacing and timing is too perfect.

> on modern CW rigs?)

What is a BFO? Seriously, the high end rigs don't use them. They detect CW using the product detector (SSB) or some similar method.

If that's what you want there are still a lot of older rigs out there, lovingly maintained and updated.

There are yahoo lists for Yaseu (fox-tango) and other lists for ten-tec and drake. You should be able to find someone with the exact rig you want if that's what turns you on.

BTW, there is no law that limits the amount of radios you own, and since

you are in the US, you don't have to register them when you buy them and
notify the authorities that you sold them. You don't even need a license to
buy them so you can scrounge around, buy an older rig (or a new one if you
want) and start out by listening.

Geoff.

If you know about Ten-Tec, and coherent CW, then it hasn't been 55 years.

Ten-Tec started in '68 or '69.

Coherent CW didn't arrive till the early seventies.

Okay, then that is yet another rig for me to check out.

I am guessing at 55 years, and as you state memory is a very
fickle thing, often wrong.   I had two licenses, both extra class
over a period of years, after I let one of those licenses lapse.

I am not certain of the call sign, I think it was W6IXC, but the
other I am   _certain_   was W6TAM because one of my friends
suggested that meant "Terrified Ancient Mariner" after my
sailboat exploits offshore the California coast in various small
sailboats ranging in size between an 8 foot "sabot" to a 27 foot
"Ericson" sailboat.

No rational reason, there is no accounting for why some
people prefer to do things the hard way.   ;-)

Hmm, I suspect I did not get across my exact meaning,
my fault, sorry about that.

I   _meant_   a device that will change the   _incoming_
morse code dots and dashes to an artificial voice.

In other words, change this code at 60 wpm:

_ _ . . .   . . . _ _   _ _ _   _ _

...into this artificial voice from an audio speaker:

"Best Wishes, Old Man"

...such that a ham newbie who did not even know the
morse code would be able to listen to a CW signal
rattling along at 60 wpm and have that signal
converted to speech that he could understand.

In theory it is possible, given a loud clean
CW signal.

I would hate to be the guy to design such a device,
it would not be a trivial project.

> What is a BFO? Seriously, the high end rigs don't use
> them. They detect CW using the product detector (SSB)
> or some similar method.

Well that shows how behind the times I am. Heck, I still
think in terms of vacuum tubes (Fleming valves?)

The below website considers the ancient BFO technology,
explains it in words even a senile old ham like me
can understand:

http://www.tpub.com/neets/book12/51.htm

Consider using a very weak RF Beat Frequency Oscillator
(BFO) to discriminate between four very close CW

signals, such as:

7,250,500 Hz (desired signal)
7,250,520 Hz (interfering signal #1)
7,249,500 Hz (interfering signal #2)
7,249,520 Hz (interfering signal #3)

A very weak, very stable, tunable BFO can create a local RF signal at a frequency of say 7,250,000 Hz

Two resulting audio "beat freqecies" result, assuming a ham can "turn off" the regular BFO or "product detector" that usually creates the audio coming out of the speaker:

1) 500 Hz
2) 520 Hz

Heh, I am in deep doo-doo, so I shift my local RF BFO to a slightly different frequency of 7,251,000 Hz

Four resulting audio "beat frequencies" result:

1) 500 Hz (desired signal)
2) 480 Hz (interfering signal #1)
3) 1500 Hz (interfering signal #2)
4) 1480 Hz (interfering signal #3)

An audio filter should be able to separate the desired 500 Hz audio from the 480 Hz audio, I hope.

Anyone have any experience with those audio filters for a CW signal? I never used one, do they really work?

> BTW, there is no law that limits the amount of

Good Grief, are those restrictions common in a lot of countries?

USA will likely become that way also, if our present political ding-ding gets his way to turn this country into a socialist paradise, with Big Brother taking care of all our problems from cradle to grave. [sic]

I am so old I can remember when the people ran the USA,
now the politicians are busy taking away a lot of our
freedoms, one by one, and they have no intention of
ever returning control to the people.

Mark

No, I got that. My AEA MM3 could do that, and so could my Pk-232. I still
have the MM3, I traded the PK-232 to someone who had better use for it
when I moved here in 1996.

Actually it is quite trivial. There is lots of digital decoding software
for the PC out there and morse code is one of the simplest forms of
digital encoding. Since probably 99% of all high speed code is machine
generated, either by computer or keyer, it's uniform enough to be
easily decoded.

There is basicly 3 levels of code out there, the slow hand code which ranges
from really well done to almost impossible to copy sloppy, the mid range
keyer code and bug code where the individual characters are perfectly spaced,
but the spacing between them varies as the operater has to think between
them and the computer sent buffered code, where all of the thinking is
done before the send button is pushed, so it all comes out perfectly timed
and spaced.

The last two really are trivial to decode compared to any digital mode,
and the first ranges from easy to almost impossible.

A few years ago, it was theorized that one of the highest scoring stations
in a CW contest was exactly what you asked about. A ham who could barely
copy code using a decoding and sending program. It extracted the
callsign from the received code and replied with a signal report of 599
in perfectly sent perfectly spaced machine generated code.

A web search on "morse code decoding programs" found plenty, and
this is probably the cheapest device on the market:

Which rig you choose should probably be dictated by what use you will make of it.

I have a Yaesu FT-857 in my car and use it portable when camping and other activities. Ergonomically, it is small but very easy to use, even the menus all make sense. The receiver is quite good and the DSP, although an audio

DSP and not at IF stage, is quite effective. It is nice to have the all-band, all-mode rig for portable use. The CW is fine, even with its relay keying, and the audio for phone is very good. For a 100w rig, this unit excels for portable use, for at receive idle, it draws only about 650 ma (measured with my digital VOM). I generally use it on battery at about 40w for ssb and about 30w for cw. This radio is probably the best 'bang for the buck' on the market. (As to a previous comment on overheating, the FT-857, unlike some other brands, does not overheat at all, so that is not a concern.)

That being said, the FT-897 is the same radio with different packaging and the ability to install a battery. I've heard, however, that many don't like that battery situation and simply take their own gel cell.

In addition, I also have a K3 for the house and/or portable. You will be hard pressed to find a rig which will stand up to crowded band conditions better. But for portable use, this unit will draw about 950 to 1000 ma at receive idle and that is worth consideration if you are operating on batteries. My unit is a very 'bare-bones' model with no second receiver nor tuner and other additions (it fit my budget this way), but I can add those at any time I wish. The receiver is probably the best on the market, the DSP is excellent, the solid state cw keying is exceptional as is the audio on phone. Incidentally, they say the tuner is excellent for almost any use.

So, in my opinion, both of these rigs are excellent but for different uses, and they appear in totally different price structures.

Good luck on making a decision.

Great, I will also search the web for others, as you suggested.

I can see I have quite a lot to catch up on.   With any luck,
my books should arrive today at my rural post office.

Really looking forward to getting back, only hope my
ancient brain is up to the task.

Most of my neurons have mutated into morons,
my synapses have not snapped in ages.   My brain has
shrunk so much that I am afraid to shake my head,
for fear of hearing a rattling noise.

Mark

> Which rig you choose should probably be dictated by
> what use you will make of it.

THAT is where I run into trouble, with my emotions.

For example, on a totally different subject, namely computers, I have always chosen battery-powered units, even though they are inferior in performance.

I expect the same stupid choice will "win out" when I finally choose a ham rig. <sigh>

Makes me wonder, when scientists finally get around to duplicating a flesh-and-blood human as an artificial hardware item, and we download our brain into the "artificial human" - - - will we make the same mistake by downloading all our emotions also. <g>

Creating "improved" artificial humans opens up several nasty cans of worms:

<http://www.kurzweilai.net/articles/art0267.html?printable=1>

Skip to the sub-section:
"Building HAL 's Language Knowledge Base" near the end,
it will downright frighten you.

Back On Topic -
****
Thanks very much for your detailed post, I will give serious consideration to the Elecraft K3 because of the high regard that rig enjoys among its users.

I have almost decided to get a very used temporary rig

at first, until I get a chance to renew my knowledge of
"modern" ham radio - - - THEN pounce on my final rig,
when I am finally fully aware of what I am doing.

Search the web for CodeQuick. It's a Morse code course that teaches you to copy code in the language part of your brain instead of the "beep" part. This has two advantages, one it is independent of speed, so you don't have to learn 5,13,20,35,etc, you just learn it once and work up your speed.

The second is that since it works in your language center, it works in a part of your brain that is still in use and still active.

The disadvantage is it uses "sound alike" phrases to help you learn code and you need to put enough effort into the practice that you stop using them automaticly.

I like to say that I have a photographic memory, but I ran out of film about 10 years ago.

Geoff.

You are in luck. Tubes are no longer used in modern rigs except for power amplifiers. If you stay with anything made since 1980 and 100 watts or less, it should take 13.8 volts DC.

Some rigs used 24 volt front ends and finals to get more gain with less noise, but they are fairly rare.

The question is how much DC are you willing to put into your radio? If you look at a 100 watt rig, it's going to need around 20 amps of DC to transmit at full power. That kind of limits how you power it. Note that some rigs use far less than others in receive mode, but at a 20:1 or 10:1 ratio it does not matter a lot.

I.e. if you radio uses 1 amp on standby, then it uses the equivalent of 20 hours of reception for one hour of transmit time.
Lower power rigs use more proportionaly for standby because they use less for transmit.

If you really want to conserve battery life, look at something like an old Ten-Tec Argonaut (the 505,509,515) or the MFJ 90 series (9020, 9040, etc), which have no microprocessor, no digital synthesythesior (pardon the bad spelling), no led or lcd display, etc.

They put out 2-3 watts which is more than enough for CW, and will "work the world" on SSB if the band is open and uncrowded. Forcing a signal through a "closed" band or the middle of a pileup requires 1kw output radio, if you hope for success and that is not going to run off a battery.

For a 1kw radio, consider a generator. I am a fan of gas grills, and therefore think that a propane generator would be a good idea. I also am comfortable with propane (or in my case propane/butane mixture) tanks around the house but am not comfortable with gasoline or kerosene (diesel fuel). But then I live in a big city.

You should watch the first and last episodes of the re-imagined Battlestar Galactica that was on the Sci-Fi channel.

Geoff.

One of my heros was a MARS station operator in the army.

He sat leaning back in his spring-back chair listening to what I would call random static. Somewhere in that static was a 60 wpm CW station that he was listening to as if it was a language, not just CW.

Best I could muster was 40 wpm, on a fairly strong CW signal.

BTW, my books finally arrived, I jumped right in studying for my extra class exam'.

I have a plan, I am going to start at the top, then work my way down to novice level.   Great Minds are like that.

It should take me at least a 2 months to reclaim my extra class license, so I will have plenty of time to decide on what kind of rig to buy.

Mark

Yes, I guess that is the only practical option,
if one is contest inclined, and has to fish contacts
out of the bottom of a pileup.

That is the nice thing about ham radio, it has
something to offer everyone, the QRP guys who
use one watt of RF, and the rabid contest guys
who enjoy the rough and tumble competition.

Even something to offer the moon-bounce guys, who
can now contact other hams almost a half-world
away using UHF rigs and parabolic antennas.

Hmm, I wonder how the FCC keeps those hams from
frying a regular communications satellite with their
strong moon-bounce signals.

Any advice about this linear amp value?

I am not sure if this is too much or not enough.

If the amp is in good working order then around $ 800 to $ 1000 shipped is around a good price.

The seller states he never used the amp, but just used it for the tuner. I don't know how he could have done that. You either use the amp or it is out of the line, or some modifications have been done to it that would have to be a major job and I doubt this. As the tubes are around $ 350 new, I would want to buy an amplifier from someone that has actually used the amp and will be able to give the power he is getting out of of it.

He said it is for local pickup. That is good as it is very heavy and to ship an amp means pulling the tubes and packing them very well.

From what I have seen many amps that use a pair of 3-500 tubes seem to be selling around $ 700 to $ 1000.

Am;ps this old should probably have the capacitors replaced. There are several places that sell a kit for this that replaces the capacitors and usually some diodes and resistors for around $ 100. This is somewhat more than capacitors cost, but the replacement kit is usually worth it.

I'm studying hard and planning a shack. I hope to be on the air by June. So, is MFJ stuff any good?

To put it more bluntly, is it moderately priced practical equipment or just throw-away junk? I'll settle for Chinese made --which I suspect much of their stuff is-- if it's relatively decent in design/execution and somewhat sturdy. I can see how the antennas and like hardware could be decent, but how about the stuff like tuners and other meters and electronic equipment. Thanks for any feedback.

yes, it is quite good. It's not Chinese junk, it's actually all made in their factory in the US.

If you've been asking yourself why the US car companies need a bailout, you will get an education buying MFJ. If you already understand and expect that "made in US" means things are not always 100% right, nuts and bolts are loose, pop rivets are not all tightly popped, that's what you will see.

The build quality is not that of aTen-Tec, nor is the design. But it's a lot cheaper. Ten-Tec survives because they also make commerical and millitary equipment, they can afford better skilled technicians, higher quality parts and better quality control.

Martin F. Jue, is one of those people who never stops inventing things. You can find an interview of him on YouTube, it's well worth watching. Jue does not have millitary contracts to support his company, he lives off of the ham radio business.

> To put it more bluntly, is it moderately priced practical equipment or just throw-away junk? Be prepared to open your tuner and make sure that all the bolts are tightened, there are no loose wires and no shorts.

As for service, they always have been willing to mail you a manual with schematic anywhere in the world, now they are making them available for downloads.

I recently decided that a 9020 (20m cw transceiver) I had bought in 1994 or 1995 was not receiving as well as it should, and carefully followed the alignment procredure. It still did not perform as well as my 40m one, so I went to their "ask a question" web page and asked for help.

I received an email from the guy that designed them. :-)

They also have a policy that you can either return a unit for warranty service, or request repair parts. Who else does that?

My advice to you, is if you are (or plan to be) the kind of ham that opens cardboard boxes, sets things up and uses them without ever wanting to look inside, stay away from MFJ. If you want to be the guy that is involved with his equipment and understands it inside and out, is not afraid to fire up his soldering iron to fix a loose wire, and so on, then MFJ stuff is good for you.

If you are not sure, you can always buy one of their cheaper tuners used and if you don't like it sell it. Just make sure to buy it from someone who will let you see it work (as in NOT on eBay).

Good luck.

Geoff.

I have the following MFJ gear:

o   MFJ-259 antenna analyzer; I like it a lot. It's not perfect, but it
     works well enough for my purposes. Bought used.

- MFJ-906 6m tuner. It works very nicely.
- MFJ-921 2m/1.3m tuner. Works extremely well.
- MFJ-461 pocket CW reader. For solid copy, needs really good signal, but still useful.
- MFJ-4225MV power switching supply. This is a good, solid, hash-free, cool-running supply that not only drives my radios, but also is good for electrolytic etching (see http://www.steampunkworkshop.com for more). It's as good as my Samlex SEC 1223 power supply, puts out less hash, and has meters.
- MFJ-564 iambic paddles. Not great, but serviceable. I need to take it out of service and completely readjust it.
- MFJ-441 keyer (a gift). Works; I don't need it, as my radios have keyers built in.
- MFJ-557 code practice oscillator with key. CPO is OK; key is trash.

Wow! I hadn't realized I had so much MFJ equipment.

Overall, it's low-to-middle end: not all junk, but not high-end gear, either. Some of it is a bit overpriced, I think, but it's certainly not priced like high-end gear, either.

When I was growing up, and when I was a new ham (think 1950s-1960s), there was a real need for this sort of gear at this price level, and it just wasn't available. I grant that lots more components were available locally: I could walk into parts houses in Houston and get everything I needed, except Big Inductors, Big Transformers, and Big Capacitors, to make a linear or anything smaller. Some of this gear is hard to homebrew, and I'm glad Martin Jue decided to start making and selling it.

Do you have the user written manual? It is in German and AFAIK never translated but a lot of it is pretty obvious anyway. For example the specs to make your own "grid dip" coils can be figured out, once you understand the metric wire sizes.

> o MFJ-557 code practice oscillator with key. CPO is OK; key is trash.

If this the plastic based one with the bent metal U shaped bracket, it was in the 1960's the key a lot of novices first learned to use. It can be adjusted to work (how well is a matter of opionon) and IMHO should be given to a boy scout or someone else interested in learning morse code.

You may be lucky, they might actually go far enough to come to the same conclusion and buy a real key. :-)

Geoff.

I was damn lucky: when I got my Novice ticket in 1962, my uncle Stu gave me
a Vibroplex J-36 (he used it as a radio op on B-25s in WWII, he told me)
and a J-38 that he also had used. Still have 'em.

> You may be lucky, they might actually go far enough to come to the same

Except for the high-end MFJ stuff, they appear to go for the lowest priced
stuff that will get the job done and last for the design lifetime -- which
I think is the warranty period.

I have no fear of electronics hardware, having done time as an
electro-mechanical tech in Silicon Valley. I still have my trusty
Weller and am gathering parts to build a code oscillator and am also
researching radio kits to tackle. I just wanted a general opinion of
MJF, they being so prolific in a seemingly forgotten corner of basic
electronics. I know zip about radio, so studying for my license has
been both enlightening and fun. Thank you for your comprehensive take
on this company. ;)

I have a tow MFJ tuners I bought circa 1995. One of them arrived with a
loose screw and the other had a pop rivet loosen (recently) on one of
the SO-239's on the back.

Both simple fixes.

Geoff.

... but, alas, probably not worth the effort (in my experience, at least). The MFJ 2x9 with the grid-dip coils is absolutely the least sensitive and hardest-to-use grid-dip oscillator I've tried.

A few years ago I did a three-way shoot-out between GDOs. The test tank was a piece of scrap Airdux inductor, with an air-variable capacitor soldered across the ends.

The MFJ had to have its probe coil shoved right up next to the end of the coil to get a dip indication. The frequency readout was nice and precise, but the dip was not terribly deep, and with the probe so close to the coil I'd be very concerned about the probe "loading" the tank and pulling it off frequency.

A Heathkit solid-state GDO was rather better, with a sharp dip available with its probe about a half-inch away from the end of the inductor.

The best results came from a Measurements 59 GDO - the old firebottle model with a peanut tube in the sensing head. It got a sharp dip deflection with the probe 2-3" away from the end of the inductor! This model is big, clunky, and is probably the gold-standard for GDOs.

I've since picked up a Millen but haven't done a head-to-head comparison with the others. Based on what I've read, it's probably somewhere between the Measurements and the Heathkit in sensitivity.

The best approach might be a hybrid... use a good GDO to find the dip frequency, then hold it near an MFJ 2x9 in frequency-counter mode to get a precise readout of the frequency. It's a shame there's no single GDO which has both high sensitivity and a really precise frequency readout.

Might be a tempting project one of these days... build a lambda-diode GDO and add a precise frequency counter module to it.

I have an antenna tuner by MFJ. It does work ok. I did have to open it up
and tighten up some loose screws.
Years ago I bought a packet TNC from them. It did not work and I sent it
back , about 2 days after I called them, they had another unit at my house
and told me to send the old one to them. Any electronic unit can arive DOA,
but they did the very best getting me a new one. No problems with that unit
for as long as I used it.

As others have mentioned , just open the new MFJ up and tighten up all the
screws before using it.

I

Well, there are several types of Lithium ion battery.  Some are
chemically unstable, such as Lithium-Cobalt, and are prone to taking
off thermally.  Then there are others which are far more inert, such
as LiFePO4.

Any battery will die or explode if abused, lithiums and NiMH cells are
not immune to this.

Many of the cells on the market are well past the 1000 cycles.
Particularly in the electric vehicle sector (which is where I'm
employed at present).

Again, I see these batteries used in far more demanding environments
than portable HF radios, and see them outliving that 6 month
boundary. Indeed, my netbook, which runs about 15W off a 3-cell Li-
ion pack, had about 1.5 hours battery life when I bought it about 2
years ago... and still has much the same capacity now.

In the case of the FT-897... the battery packs are proprietary in
nature, and I've found NiMH cells don't last as long for me as Li-
ion. So I'll probably find myself coming back to Yaesu for more when
the two I have sign their resignation letters.

Yeah, I guess they don't see a market for the C/D cells in your
area... which is a shame. Interestingly...

The latter two being from a mob run by the supermarket giant,
Woolworths. (Dick Smith Electronics is pretty much useless these
days. My FT-290RII was originally bought from DSE many moons ago,
these days they barely sell CB gear. Woolworths ruined both them, and
Tandy Electronics.) I think they still sell them in their
supermarkets too. So they're still in the "easily obtainable"
category here in Australia. I understand the situation could be quite
different in the US.

Reads like a typical e-Pay ad ...
I turned it on and the light lt ... Right.
Never used it as an amp ... cause the tubes are dead
2 KW amp ... not the best day it ever saw

e-Pay is like the Judge Roy Bean TV show ... there is no law
West of the Pecos, nor on e-Pay.

$500 is fair, IF, and a big IF, the tubes are OK.

Caveat Emptor.

I've been looking at their catalog, an '09 hard copy and the '10,
.pdf. What's the Ameritron stuff? Is that their high-end line? I
see on their website they recently acquired Cushcraft Antennas. Is that
what Ameritron is, an acquisition?

Amertron, was a company that made amplifers. It was bought by MFJ and moved
to their headquarters, though it may have it's own manfacturing facility.

MFJ has tried to keep the product lines intact, even if there is some overlap.
They also bought Vectronics, the Hygain antenna line, and now Cushraft.

For example, Ameritron made accessories for their amplifiers such as
QSK switches and tuners, all high power only. Think of it as rounding
out their product line.

If you look back at Cushcraft they have been shrinking their line of
amateur products since they were bought out, I think in the 1990's.
The company that bought them is doing well selling commerical antennas,
and not as well selling amateur antennas. Now the line will be in the hands
of someone who believes in ham radio and is trying to make a living from it.

To me, it's a shame because with such a large, active and rich ham community
as the US has, it can not support the few manufacturers it has.

Geoff.

Well, what did my older technician license say about the number of hams in the US? Maybe 600K? That's not a very large market. So I guess some people are looking to make money while the sun shines.

I'm rapidly becoming aware of is the price tag on some of this stuff. I'm absolutely floored by some of the prices I'm seeing. $400 for a Buddipole, an oversized tinker-toy!? You must be putting me on. $4-8K fer transceivers? Fer that kinda money, there better be a lady's "hand" in there while I'm doing cw. $3-4K fer kits? Is there a job waiting for me when I get that sucker assembled!?

That's one of the reasons I was asking about MFJ. They seem to understand not everyone is sitting on a stack of gold bullion. Hell, I don't mind paying good money for quality, but some of this stuff is absurd. $300-500 fer a 4 element yagi? It's aluminum tubing, ferchrysakes! I guess the deals are where you find 'em and that's one of the reasons hams are such avid DIY'ers. Where's my Fluke and wire stippers? ;)

Compared to what? Here there are about 600 licensed hams.

>
> I'm rapidly becoming aware of is the price tag on some of this stuff.

That's simply amazing. A friend of mine with an 817 was looking at a
metal antenna that came in several sections, with a tripod for $100,
cheaper than he could of made it out of building supply parts.

> $4-8K fer transceivers? Fer that kinda money, there better be a

Those are the high end contester type of rigs. Ten Tec who sells well made

products, made in the USA, has the Jupiter at $1600, and the OMNI VII for
for $2700, plus the top of the line Orion II.

Universal Radio www.rffun.com lists lots of rigs, from $599 up (ICOM IC-718).

While everyone wants a rig that can do 160m to 70cm, scan all the frequencies
in between, be run by a computer and have the latest DSP, how many actually
need it?

Hmmm. My cellphones (with Li batteries) have somewhere in the 1000 cycle range on them now, and are still going strong.

The last laptop I bought (3 months ago), charges when connected to power, without waiting for a discharge. Waiting for a discharge just leaves you dead if you disconnect at the wrong time in the cycle.

Actually, C and D size NiMH seem pretty rare here, except by mail order. Presumably, mail order works there.

I have and use several MFJ products. Design is ok to good, quality
control is marginal. Think of them as kits assembled by trainees with
no supervision. Be prepared to fix the cold solder connections,
poorly drilled mounting holes, etc. Once you finish that, they work
well and if treated carefully last.

The "treated carefully" is good advice - understanding the limitations
of the equipment is critical (and not specific to MFJ products!).

There are a number of stories going around, concerning people who have
managed to damage MFJ antenna tuners - typically, by burning up the
inductor (sometimes melting the form on which it's wound).  In each
case I've read, the tuner in question has been a "T" configuration
(the commonest).  One of the gotchas of a "T" tuner is that it can
appear to "match" an extremely nasty load (e.g. a short circuit) down
to a low SWR, while what's actually happening is that you're
"matching" the tuner's own internal losses.  You can end up with
nearly 100% of your transmitter output being dissipated in the coil...
and this tends to let the magic smoke out, after a couple of minutes.

The same problem exists with other "T" tuners - it's not specific to
MFJ - so understanding the limits and vulnerabilities of that type of
tuner is important to proper use.

>Heliax or HardLine.... We call it PoorMan's Heliax....

I avoid 9913 like the plague since lightning hit the system, blew off all the water proofing, and within 15 minutes I had water running out of the 2-meter rig. I was using it on all bands. At that point I took it all out and gave away all but about 200 feet out of over 1500 feet. The 200 feet finally went into the dumpster.

I used to take the stance that if it was properly water proofed it was fine, at least until that lightning strike. I now use mostly LMR-600 and some LMR-400 with Davis BuryFlex for the flexible runs.

As for Heliax and Hardline, they are probably the cheapest as there is a lot of it floating around. I had two 100 foot runs of 1/2" Heliax with connectors given to me along with nearly a full 1000 ft roll of 3/4" hard line.

Check the local swaps and you may find 1/2" or 7/8" Heliax or even larger. Check with the local two way outfits as they may have systems they pull out. I picked up a whole pick up truck full of 7/8" Heliax and half a dozen connectors that way. I think the whole thing ran less than $100.

But I still have to repeat, I'd not install brand new 9913 if it were given to me. 9913F OTOH...<:-))

The other problem is that they are rated with numbers people don't really understand. When MFJ says it is a "300 Watt" tuner, that's maximum possible rating.

Like VA (volt-amps) which is used for transformers, and UPS's, it's much higher than what you would actually use it for. For low frequency ratings, you derate by the square root of 2 over 2 (.707) but I expect that's only good at 50Hz or 60Hz, at RF, it's close to one third.

Geoff.

That is fine for you, who live in Lightning prone areas, but for the
rest of the world, and for "Me" who lives where lightning is, "a Once or
twice in a Lifetime occurrence", you concern is not really a problem.

Air insulated coax is subject to water incursion. If you want to use
these cables you need
to pressurize the cable to keep water out. Even RG8 can get water
between the outer jacket
and the insulation. I was given a roll of 9913 and I gave it away as I
wouldn't use it.

It is not the lightning problem with 9913. It is no better or worse for that. The problem with 9913 is the center is hollow and if water ever gets into the coax it will fill up like a water pipe. The 9913F has a dialectric that is not hollow and water can not collect inside it.

I had some 9913 up not long after it came out and after about 10 years took it down when I moved. I just cut into it and no water came out of it. I went back up on a new tower with 4 runs of the Davis burry flex. The loss at VHF is not that more than the 9913 and I will not use the LMR series as the center is copper plated aluminum. I just do not like that even if there is nothing wrong with it.

I use the stuff indoors and out.  I prefer BuryFlex to 9913.

I have an MFJ-259 Analyzer. Had it since 2005, no problems, works
every time.
I also have an MFJ-989C 3KW VersaTuner V. Same deal, no issues
whatever since purchase in 2004.

Problem solved :-) Badly connected flat cable on MBO. Looks like Kenwood
has some big problems with "quality check"...

Just as a comment here is a YouTube video which adds some information.

http://www.youtube.com/watch?v=gbz9yv9VQVc

He has several videos of his working stations during contests using his
Argo 509 (4 watts SSB on a good day). This is one of my favorite rigs,
although I really prefer the Triton 4 digital, which is a very similar
rig with 100 watt output (if you need it), and a digital readout instead
of the dial string.

Geoff.

I use RG-58 and HDF-400. For short runs, it barely makes a difference, you'll still get good results with RG-58 on 70cm, and for portable use, I find RG-58 easier to work with. Plus, I've got heaps of the stuff -- in a past life it used to pass ethernet frames.

On the home base I use 3m of HDF-400... not for the high fidelity, but because the FT-897D I bought at the time used N-type connectors for 2m/70cm. This length was N-type terminated and just lying around doing nothing, so figured I'd put it to use, it was easier than lopping off the BNC connector and wiring up an N-type, and it could only make things better in terms of efficiency.

I also have some RG-213, but few connectors to suit it... the cable was cut at some random point, and has PL-259 connectors, so I use this for HF mainly, again, just out of convenience. One length is spare, the other having some 2.5m long radials off it for my squid pole antenna (which I use on 20m, 10m and 6m).

It'd be worth letting us know what your situation is (current or proposed) however, since there's different cables suitable for different occasions.

Thanks very much for that follow-up report.

In a weak moment, I fell victim to my emotions and
ordered a brand-new 100 watt Yaesu 857D.

Hey, nobody is perfect! - I blame it all on the stress I am
presently suffering from studying for
my extra-class license.

I bought the "look-alike" (Collins) 300Hz CW filter on a
seperate order from WART electronics, because there were
no articles on the web about any narrower CW filters
being available.

(ones that do not "ring" excessively, that is)

I hope the passband of the Yaesu's last IF stage can be shifted to
one side, as I forgot to examine the spec's of the Yaesu in detail.

If I can cock the IF passband to one side, that might reduce the
interference from another CW station somewhat, I hope.

How does the Triton 4 digital compare against the Elecraft K3
in your opinion?

Mark

Not at all. the Triton 4 is around 30 years old. It is very different in operation, instead of being a computer that has a radio wrapped around it, it is just the radio. The only thing digital is the frequency readout, and just in case you don't like it, there is an analog scale on the tuning knob.

As for sound, it's just pure clean sound, with no noise from all the digital electronics inside. The oscilator is a PTO (a brass slug moving in a coil), so if your hand is steady enough, you can tune it exactly to match the frequency of the sending station.

The K3 has very fine tuning and it may not be noticably different.

The Triton 4 has true QSK, you can hear any time the transmitter is not actually sending carrier in CW mode.

Geoff.

The Gordon West book makes this a snap. And the QRZ practice tests. I
went from nothing to Amateur Extra in 5 weeks.

> The K3 has very fine tuning and it may not be noticably different.
>
> The Triton 4 has true QSK, you can hear any time the transmitter is not actually sending carrier in CW mode.
>
> Geoff.
>

The K3 is not a computer with a radio wrapped around it. It has a DSP modulator/demodulator but the rest is straight-up cutting edge analog, complete with crystal filters and low noise local oscillators. The radio will play out of the box, with just an antenna and 13 VDC being required to get under way.

I suspect that you will be disappointed by something in that radio, but not
much disappointed, and that you will be delighted by lots of things in it.

> Hey, nobody is perfect! - I blame it all on the stress I am

If *I* can get an Extra ticket, then _ANYONE_ can get an Extra ticket.
(We mathematicians call this "proof by assertion".)

I seem to recall that the passband can be moved on the 857D and 897D
(and, of course, on the 857 and 897, as well).

> If I can cock the IF passband to one side, that might reduce the

> interference from another CW station somewhat, I hope.

That's what I've used it for -- and to get rid of the het squeal from
SWBC stations on 40m.

I have a pdf of this rotor if you need it. I am looking for a plug for
the rotor side of the cable and a potentiameter for rotor direction
thanks Pat N2WC

Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.1 2009/04/12 19:42:04
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to

rec-radio-amateur-moderated-request@panix.com.

Hi,

I have a computer controlled version of this receiver, that I acquired recently to salvage the PSU module. I am thinking of parting the rest out. It has a complete set of mini coax cables and, as long as module 7 isn't the front panel interface, a set of spare modules.
Please contact me off list and we'll sort something out.

```
Cheers,
Dave.S

I would like to try something new, and want to swap my Eton E1XM for
any of the following table-top receivers (used of course):
Icom r75;
Drake r8;
Yaesu FRG-100

If you have something that is not listed here but you think it is fair
trade, please send me your review of your rig. Try to convince me.
My Eton E1XM is in superb condition, purchased in US two years ago,
has all included in the box accessories and even the wrapping plastic
(the box is also here). No scratches or wear-outs or anything, the
condition is like new.

Kenwood TRC 80 Programming Please help me if you can.

Good day,

I am asking for assistance with my Kenwood TRC 80, I need to reset the unit back to factory defaults, but do not know how to do this.

If you have any information or if you can direct me in the correct direction I would appreciate it.

Thank you for your time and assistance.

Regards,

Chris - Pretoria, South Africa

I'm in Sweden, but Lowe hf 150 is not on my consideration list. Sorry
about that.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/
```

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information

bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month

```
One significant omission, requiring immediate updates, for this article       |
is that it does not mention newer amateur radio newsgroups created since      |
it was written, including:                                                    |

 rec.radio.amateur.antenna                                                    |
 rec.radio.amateur.boatanchors                                                |
 rec.radio.amateur.dx                                                         |
 rec.radio.amateur.equipment                                                  |
 rec.radio.amateur.homebrew                                                   |
 rec.radio.amateur.moderated                                                  |
 rec.radio.amateur.space                                                      |
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

Hi,

looks like usbms is related to 3G modems. Do they include an internal
battery ?

why did you organize battery fine tuning?

follow this link http://sourceforge.net/projects/clockloop/ before analyzing
battery
;-)

I AM KC8QJP CRISCO KATHY,TAX SEASON IS ALMOST UPON US. I CAN GET YOU THE BEST RETURN. IT MIGHT BE A LITTLE BIT ILLEGAL.BUT WHAT THE HECK,THE GOVERMENT TAKES TO MUCH OF OUR MONEY. BE SURE AND BRING A BIG CAN OF CRISCO WITH YOU. I WORK BEST ON MY KNEES WHILE SOMEONE SLATHERS MY FAT ASS WITH CRISCO. BRING A BIG CAN, I HAVE A VERY LARGE ASS.

CALL 419-698-2075 AND ASK FOR KATHY

OR STOP BY WITH THE CRISCO!

HI!

I found one used TA-63 for a good price, but there is no manual... Can
anybody help?

Hello everyone!

I new around here.

I'm currently working on a old junky but free dx-160 radio.

I'm wondering if anyone has any mods for this radio?

Most of the links Im finding are outdated / dead links.

thanks
-wes

> You didn't think he was serious, did you?

Only about as serious as the person selling them claiming they are a ham
radio. They cover 40 channels like a CB, just upshifted into the middle
of the 10m ham band. They miss the CW segment, the Novice/Tech segment
(do they still exist)? and the FM segment.

I also did not see any mention of CTCSS in the ads, if it does not
have it, it's not a very usefull 10m FM rig. Almost all the 10m repeaters
use it.

In order to actually use them you have to spend 1 minute searching the web,
which I did and found that you open the top cover, move a jumper and replace
the cover. Then it becomes a real 10m rig. Unfortunatley, it becomes a
high power, illegal mode, CB and freeband rig too.

On the other hand it sure is impressive, and to make modding and repair
easier it uses no SMT technology, which for most hams would be a plus.

I wonder if it's any good?

Geoff.

New word I coined 12/13/09, "Sub-Wikipedia" adj, describing knowledge or
understanding, as in he has a sub-wikipedia understanding of the situation.
i.e possessing less facts or information than can be found in the Wikipedia.

Watch the AGC (automatic gain control) circuitry of the VoiceMax
module hold an audio signal perfectly constant, with no clipping
distortion to the original signal!
http://files.me.com/dr_gary/9xgisb

See what others are saying about VoiceMax at http://myworld.ebay.com/telstar-electronics

Have you looked at the audio... just prior to mixing with the RF?
Does a medium to high level audio signal show signs of envelope
clipping?
What about a low level audio signal... does that make it through the
audio chain properly? If not, you could have a biasing issue.

They're a really good bit of kit...Be aware that all the units are hand built, so may take a while to arrive (Mine took 3 months, but I did order from the first batch) - I'm not sure what the turn around currently is, they may have a number of ready built units in stock!

Its software upgradeable, now does RTTY, and I think CW isnt far off, you can add USB to it, which makes upgrading easier, and it also does logging..I think its probably best to look at the site for the lowdown..

The only moan I have is the battery compartment, its a bit of a fiddle to get 2 9v/PP3 batteries in there...but once you've got the knack, its simple!

Not used mine actually 'in the field' as of yet, but the RX performance alone is astounding!

```

Gee, what "high level audio signal"?

> What about a low level audio signal... does that make it through the
> audio chain properly? If not, you could have a biasing issue.

Huh?  I could have a "biasing issue"?  How?  Where?

 *NO!*  WAIT!  Damn!!!  I'm replying to a google grooper's posting.
No wonder it makes little sense.

Having suffered for years with tiring audio on my R71, decided to fix it. These are one of the best radios ever made, worth hanging on to. The problem is the switching diode D75. The Emitter follower Q26 is enabled for AM reception, the 3 volts or so being used to forward bias D75, thereby passing the audio to IC6a. The current through the diode being only a few hundred microamps is insufficient to turn it on fully, causing the forward dynamic `resistance to be modulated with the audio, causing distortion. The fix is simple. Replace R202, (100k) to 15k, and replace R128 (1K) with a jumper. This increases the current to a more satisfactory.3 mA or so. The results are great.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

Hello Triode:

With your permission, I would like to post your solution and schematic
from Mods.DK on the R71 yahoo group. OK?

Thanks,

Dave

Triode:

Thanks. I haven't been able to reply on RadioBanter; don't know why. I took your description from your submission to worldwidedx.com. My ref to mods.DK was a mixup with another post, sorry. Why don't you join the yahoo R71 group? We have tried and pretty well succeeded, I think, in making it the place to go for all things R71. Plus a bunch of really helpful people.

Thanks again,

Dave

Having installed a synchronous detector board into my R71a, there was the need to select between it and the original AM detector, without defacing the radio by adding extra switches to the front or rear panel. After studying the circuitry around the mode select IC13 on the logic unit board, there is an unused pin 1 that can be used for this task. Remove Diodes D10 and D13 from pins 32 and 36 on IC14. Add a long wire to pin 1 of IC13, best done at the unused pin at J2. This wire will now go high when FUNCT/CW is pressed, ... the same way as FM is selected by pressing FUNCT/AM. For my situation, I routed this wire through to the main board, through a switching diode, cathode to AM pin on J12. This enables AM mode when high. The added`wire also connects to the base of Q25 through a series 4k7 resistor, and a switching diode, cathode to base. This disables the normal AM detector when high. The voltage on this wire also is used to enable the Synchronous detector board. In use, all mode functions are as normal, pressing FUNCT/AM will select FM, AM will select normal AM, now pressing FUNCT/CW will select the new Synch AM, The ICOM memory will also store the new synch mode together with frequency. Unfortunately, there is no spare or unused icon in the flourescent display to activate with the new mode, so when selected, no mode icon is visible. This switching arrangement has many other uses and saves having to mess up the appearance of the radio. When working on your radio, take your time, and understand what you are doing. Disconnect power first.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.swap (and currently archived at http://www.faqs.org/faqs/radio/swap-guide/):

radio/swap-guide
Subject: Rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet

```
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 6 Nov 2001 19:25:51 GMT
 Posting-Frequency: Monthly
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

hi
anyone have info about a monarch tube stereo? SMX-52AC.

was monarch similar to other japanese companies such as pioneer?

thanks
louis

Can you tell us what kind of synchronous detector board you have
installed ?
Do you have any pics ?
Regards.

The detector is a homemade design using a phase detector to lock the
Icom 2nd local oscillator to the carrier. I dont know how to post pics.
Cheers.

This fine RF-590H is up for bid to the highest bidder for the next 5 days. Let me know what you think its worth. I'm thinking the bidding should begin around $1500. Let me know what you will bid. Bid at Jtron2@gmail.com ... I will end it at 9:00 pm PST on Feb 12, 2010 and notify the sucessful bidder. I will leave a public note as to the outcome of this auction.

http://s1022.photobucket.com/albums/af347/n6jp/ (Be sure and click on each picture to enlarge it for a better look.)

It is my pleasure to be able to bring this Harris RF-590H premium receiver to the community as it is one that rarely comes up for sale anywhere. These receivers were built to exacting military standards using the highest quality components and modular engineering. Stability of this receiver is listed at + or - 1 part in 10-6 with a 5 Mhz TCXO standard. What does that mean? The circuitry in this receiver is rock solid!
The RF-590H was originally used in the US military (mostly Navy) and diplomatic institutions (Embassies) for communications and surveillance from 1982 to about 1998 when it was replaced by the RF-590A.

This "H" version of the RF-590 is coined the "hopping" or "agility" version due to it's special scanning of channels and the ability to zero in on frequencies from other cooperating parties much more quickly. According the the Harris patent for this model, it could take about 10 to 15 minutes to scan and locate a transmission since transmissions may be intermittent and on unknown frequecies. Harris designed special circuitry to allow the operator to locate these transmissions much more quickly. I do have a special manual for this "H" version. However, for practical listening, the included full manual should allow for most common operations. If you care to see portions of the manual prior to bidding, you may look here:

http://www.premium-rx.org/rf590.htm

This RF-590H is built for 19" rack mounting and is a heavy, rugged radio measuring a depth of 20.5 ", height of 5.25" and weight of around 40 lbs (50 lbs shipping). Inside, each stage is enclosed within a separate shielded box to minimize birdies. A large aluminum knob and numeric keypad permit tuning FM, AM, SSB, and CW signals in the 0 to 30 mhz spectrum. The frequency resolution is down to the individual Hz and is broken out to the full 3 decimal places on the bright blue vacuum flourescent display.

The RF-590H has the option of 4 AGC settings, and filters of 6.8 khz for AM, 3.2 and 2.7 Khz for SSB both upper and lower, and 300 Hz for CW. I have taken a picture of these crystal filters inside the top of the unit and it appears like there is one slot open for another filter, if desired. Just a quick note, if you think that the AM filter of 6.8 khz it too wide, based on past experience with other receivers, you would likely be correct. However, the tuning on this Harris is so precise, you can tune into an AM signal and if a narrower bandwidth is required, switch into SSB and chose upper or lower with amazing results. I have found that there are few good receivers that will allow this without serious degradation of the sound quality, but you hardly notice with this Harris. This tactic alone has allowed me to copy AM signals on shortwave that my other highly tricked out receivers using passband or a sync detector struggle with.

The RF-590H has 100 memory channels and memory scanning of these channels. I mention this as I rarely ever use memory channels, but others find this to be a large benefit when listening.

One thing that will tell you that this is a high end receiver is the modular design. The receiver is a BITE built in test button. Once depressed, the receiver runs through a series of audio, display and circuitry tests (processor EPROM, Processor RAM, synthesizer lock, rf signal path, and IF signal path) and will either display "passed" or give a fault # on the display and light the red fault light on the front panel. The owner's manual gives the fault codes so you know where to look for the problem (called fault isolation). As you can see in my picture, this receiver passes with flying colors, but if it would not, replacing it with an available module/board would be a snap. Now if only the auto industry would do this with our automobiles instead of us trotting off to drop money for a dealer to run such a test.

Speaking of owner manuals, it comes complete with a full set of manuals that cover the RF-590H receiver. These manuals have both operating instructions and schematics covering this fine receiver.

This Harris RF-590H is microprocessor controlled receiver and due to the exacting standards in build, originally sold for $17,900 to the military. This receiver is categorized as a premium receiver and there is a group of premium receiver owners online that assist each other with questions such as operation, location of parts, repairs, mods, etc. You can find that site here:

http://www.premium-rx.org/

Other features of this Harris include a 1/4" headphone jack in the front, an RF gain, a BFO that operates + or - 9.9 khz in 10 Hz increments, and a whole series of terminals on the back that provide pre and post IF filtered 455 khz jacks and a whole host of interfaces for use with other equipment or with remote devices.

I have mentioned all the the main features of this RF-590H except for one. And from my perspective, it is one of the strongest....the audio circuitry. Unlike amateur radios or consumer shortwave radios, professional communications receivers have been designed for hours of monitoring with a minimum of knob twisting. This Harris receiver works some magic with the audio circuits, bandpass filters, and automatic gain control. Besides news broadcasts from foreign broadcasters, I have enjoyed listening to music on the shortwave bands by piping the audio into a "Sounds Sweet" speaker that sits on my desk. The low frequency content is surprising as this is often removed from receivers to "improve" intelligibility, but Harris leaves it in. Typically, taking the audio into a larger speaker would result in a painful experience, but with this Harris receiver, the result is so pleasant. As is the custom with all communications receivers, the onboard speaker does not do justice with this receiver's audio capabilities.

I doubt that there are many better receivers built for broadcast AM audio. If I am doing work where I don't have to concentrate, it is a nice departure to tune into the 80, 40 or 20 meter bands to listen in on some of the amateur radio nets. The SSB on this receiver sounds unlike anything on my other communications receivers!

Electrically, this Harris works just beautifully. I have tested it over the past few days and it has been a joy. Cosmetically, this receiver is in very good condition. There are the usual nicks and smalI scratches that one would expect to find on a older piece of gear. However, the circuitry and internals are perfect so this is cosmetic only.

At this point, I hope I have covered anything that may be a question for you. However, if I have overlooked something, please email. Most questions will be with regards to shipping.

However, there will be a charge of $150 for double boxing and shipping this fine receiver anywhere in the lower 48 states of the U.S. This allows me to pack well so that it will arrive undamaged. Anywhere else will cost only enough extra to pay to the destination.

I can ship this unit overseas, but it is not my desire to do so due to the high cost of shipping. The cost will likely run $400, $500 or even more and I won't know until it is fully packed at the end of the sale. If you have the means to pay these high shipping charges, I don't mind working with you. However, due to the nature of the cost being tied into both the weight and the size shipping box, I am unable to give a quote for shipping until the receiver is fully packed after the auction ends. Thank you for understanding!

The winning bidder is asked to pay within 5 days. You may pay via cash (if picked up), or US Postal money order. I will not ship until full payment is received and processed.

This excellent reciver is offered as is with no guarantees implied or offered. No returns or refunds are offered to the buyer of this unit.

Contact me at Jtron2@gmail.com with your questions or bids. I live in the 93312 zip code area of the U.S.A.

regards, Jerry

However, there will be a charge of $150 for double boxing and shipping this fine receiver anywhere in the lower 48 states of the U.S. This allows me to pack well so that it will arrive undamaged. Anywhere else will cost only enough extra to pay to the destination.

I can ship this unit overseas, but it is not my desire to do so due to the high cost of shipping. The cost will likely run $400, $500 or even more and I won't know until it is fully packed at the end of the sale. If you have the means to pay these high shipping charges, I don't mind working with you. However, due to the nature of the cost being tied into both the weight and the size shipping box, I am unable to give a quote for shipping until the receiver is fully packed after the auction ends. Thank you for understanding!

The winning bidder is asked to pay within 5 days. You may pay via cash (if picked up), or US Postal money order. I will not ship until full payment is received and processed.

This excellent reciver is offered as is with no guarantees implied or offered. No returns or refunds are offered to the buyer of this unit.

Contact me at Jtron2@gmail.com with your questions or bids. I live in the 93312 zip code area of the U.S.A.

regards, Jerry

Jeez.  You can get a brand new K3 for $1,649 (add $250 for a couple of
XTAL filters) and you'll have the best receiver ever made.  $1,500 seems
like a giant leap of faith. Where do you get parts for the thing?

Good day. I have had one of these transcievers for some years and have done
```

several updates and mods to it. These include the Warc bands and published improvements to the RX front end.

Now at last 14 MHz is opening from time to time and I am working some DX on CW and SSB. However I am beginning to suspect that the front end has either too much RF gain, or its stability factor is poor. Basically hte receiver gives me the impression of having a fairly noisy RF satge with too much gain. Indeed reception is sometimes better with the RF gain backed off somewhat even on weak log path European and US signals.

Over the years I have built several communications Rx's and have a very wide experience of weak signal reception.

Has anyone else had similar problems with this or other rigs?

I would be very interested to hear, before I pull the front end apart and redesign the whole thing!!!!

73's Cliff Wright ZL1BDA ex G3NIA.

I have an IC-Delta 100 tri-band mobile radio which has a remote (wireless) command microphone. This same mike operates via wire when plugged into the radio. Seeing as ICOM makes newer radios with similar command mikes, I am curious if the data format is published or even common between radio models.

Cliff-

I've noticed that a noise increase can sometimes be caused by the noise
limiter.  See if it makes any difference by turning it off.

Also, intermodulation distortion from strong signals outside the band,
might be what is causing poor noise performance.  Take that into
consideration if you design a new RF stage.

Hi

I have a Watson W-30am 30-35 Amp peak power supply.

After using an IC-706 running 30-40 Watts on PSK31 for a few hours the power supply starts making a very load buzz/hum on keying the radio. The noise decrease's and increases turning the power up and down on the radio itself.

I have also notice the buzz/hum is still there when the radio is disconnected and a small load say 1 Amp connected to the PSU, although the noise is a lot quieter. So I don't think that the radio causing it.

When I start it all up the next morning the power supply is running fine again, no noise until I have been keying the radio in PSK31 mode for several hours when the very load concerning buzz/hum starts again.

The power supply has a top case fan that draws the heat out of the case and the power supply case doesn't feel hot to the touch. When the load noise occurs

Does anyone have any thoughts what could be causing this?

Thanks for any advise or help in advance.

How long of a cable run will you need?
What operating performance are you trying to achieve? (local communications or a station 160 kilometers away?)
How much power will you be using?
What is the highest frequency you will be using?

Use RG8 (0.405") type cable for antenna leads. Use RG8X type for jumpers.

The BEST RG8 period is Davis BuryFlex.

Look at Beldon 9913 for long runs... has Good Spec's and cheaper than
Heliax or HardLine.... We call it PoorMan's Heliax....

Without any details as to the type of operation, I agree with the Davis BuryFlex. I have several runs of it up a tower. I use it for the triband bean, 6 meters, 2 meters and 432 SSB work.   While not as good as hard line, if you want to stay with a coax about 1/2 inch that is what I would use. I use the BuryFlex for all bands for the outside antennas where I use an rg-8 size coax.. It is somewhat stiff inside the house and I use another more flexable coax. I would use 8x for the low bands for jumpers but it will not handle the power I run.

If I was not going over 20 feet, then the rg-8x type is a good coax to use.

Steve,
I did a "google" search and second hit was this one:

http://www.eserviceinfo.com/service_manual/datasheets_y_0.html

Complete FT101ZD Service Manual, downloadable.
john

Has anyone tried one of these power supplies a Watson Power-Max-45-NF and
are they any good?

How loud is the fan and is it a thermally controlled fan?

I have been looking for some reviews but I haven't found any.

Thanks

Not auction...

Clean for its age. looks non-smoking.

Pictures: (click on image for big image...)

http://dyb.com/radios/radios/1.html

http://dyb.com/radios/radios/2.html

http://dyb.com/radios/radios/3.html

details:

HEATHKIT SB-110A S/N:28839

HEATHKIT HP-23

Radio checks out at 96 watts out in tune, 102watts peak SSB

Aligned calibrator

Adjusted bias, ALC, S-Meter

LSB carried osc is flaky, and does not work most of the time, LSB is almost never used on 6 meters. Tapping on the crystal seems to bring it back.

Receiver hears .1uV.

PTT is odd, unless rig is in VOX mode. Might be V5B 6AZ8, Relay amplifier.

Surplus Sales of Nebraska has more 11 pin sockets/recepticals for the power connector.

All controls and switches need cleaning.

Included is CDROM with manual copy of rig and most of the available power supplies.

HP-23 needs (and is) to be set to the lower voltage. (rotary switch on side of supply)

Power supply was brought up slowly with variac. (unit sat for a few years. Ran it four hours after bringing it back up)

$325 plus shipping from 78701

Paypal. Money order, cash if picked up.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to

rec-radio-amateur-moderated-request@panix.com.

Steve-

I downloaded the manual to have in my collection. It is in 11 parts in ".rar" compressed format, of about 2 megabytes each. If you are persistent, you should be able to download it one part at a time. You would then collect the parts in one folder and decompress part one. The decompression program should automatically incorporate all into one 20 Megabyte .PDF file. (I used StuffIt Expander on a Macintosh.)

To answer your original question, the microphone is 600 Ohms impedance. I think many CB dynamic replacement microphones would work if wired correctly. Pin 1 is ground (Shield), 2 is Microphone hot, 3 is Push-to-talk and pin 4 is not used.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been
recently revived by an active moderation team. We are currently seeking
suitable information, FAQ, and bulletin articles from the entire
rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our

newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

```
One significant omission, requiring immediate updates, for this article       |
is that it does not mention newer amateur radio newsgroups created since      |
it was written, including:                                                    |

 rec.radio.amateur.antenna                                                    |
 rec.radio.amateur.boatanchors                                                |
 rec.radio.amateur.dx                                                         |
 rec.radio.amateur.equipment                                                  |
 rec.radio.amateur.homebrew                                                   |
 rec.radio.amateur.moderated                                                  |
 rec.radio.amateur.space                                                      |
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For info please contact the owner:

Norm, WR1W at

newoodnh@ne.rr.com

1. Elecraft KX1 "Ultra portable" CW Transceiver with added KXAT1 tuner, KXB30 30 meter capability, KXPD1 paddle. In almost new shape. Little used. Price: $250.

2. Kenwood TS 570DG Transceiver with 500 Hz CW filter. Excellent condition. Price: $450

3. Yaesu YO-100 Scope. Only used for "flat top" monitoring. Never tried other capabilities. Clean, nice appearance. Price; $90.

4. Ten Tec 40th Anniversary Edition Iambic Paddle. New. Installed cable and adjusted for my fist but never used after that. I have other paddles and do not need this one. Price: $125.

5. Yaesu VX1R 2mtr mini HT in original box with charger, lithium battery and separate AA battery adapter. Good condition...little used. Price: $65.

6. Full wave bridge Hi voltage (approx 1650 volts at 600ma) power supply with 53 mfd oil filled capacitor. Neat and heavy construction with teflon wiring, stainless hardware, K2AW's "Silicon Alley" rectifiers. You pick up or will drive reasonable distance. Selling at very low price so that it goes to someone who can use it right away or for parts. Price: $60.

Hello,
I am looking for a preamplified handy microphone for my icom ic-738.
I have a sm-20 desktop microphone and a hm-36 handy electret microphone.
With sm-20, I have nice and loud SSB modulation but I want a handheld
microphone with preamplifier built in. HM-36 has very low modulation.
I am thinking to put a preamplifier insde HM-36 or buy another  with
build in preamplifier.

Opinions regarding Yaesu FT-817ND   transceiver?

Seems like a great little rig, blasts out a whooping 2 watts
of RF power on batteries, do not know if I can handle
that much power, if I decide to apply for another license.

I was W6TAM 55 years ago. (extra-class license)

I have not really shopped around for a rig yet, so do not
know how the Yaesu FT-817ND rig compares to
its competitors in the $700 price range.

Any advice gratefully appreciated -

Mark Conrad

Hello Mark.

They are great fun. I believe there isn't anything directly equivalent (i.e.
HF / VHF / UHF portable) from the other manufacturers.
Best wishes,

Roger.

I use mine mainly for working satellites. I've been on the birds for nearly a year and a half and have used it to make about 1500 contacts with at least 80 different stations. I've worked over 25 American states as well as 5 Canadian provinces and one of its territories. My furthest contact with it was the K4T DXpedition a few days ago, which is about 4100 km from my QTH.

I made my first contacts with just the stock rubber duck antenna but I've been using an Arrow dual-band Yagi for more than a year.

I'd say that my FT-817ND was worth the investment.

I don't have one, though I have the 817's bigger brothers the 857D and
897D.

Two of my friends *do* have 817s, and _LOVE_ them.

> Opinions regarding Yaesu FT-817ND   transceiver?

The original 817 had a problem with batteries. The off switch did not
actually turn off the power and the finals being able to function
from 1.8mHz to 450 mHz went into oscilation and burned out.

Has this been fixed? The popular fix at the time was to remove the batteries when the rig was not in use.

The biggest problem with the Yaseu is the tiny screen. The ICOM 703 has a much larger screen. The 703 only goes up to 6m though.

The 706 does have the same frequency coverage as the Yaseu. You can adjust the output power down to 5 watts, so it may be a viable option. It also has a more features than the Yaesu.

If you are using it in a location where size and weight don't matter that much and nor does the increased battery drain, it may be worth the money for it so that you have 100 watt HF output if you need it.

The ICOM rigs include a removable front panel, so you can mount them elsewhere and just have the control head at your operating position.

Looking at Universal radio the current price for a new rig is
$600 for the 817ND, $730 for the 703+ and $945 for the 706IIG.
So you have a big range of price, power and features to choose from.

The Yaesu is the grandson of the FT-290 and simlar rigs, which were portable VHF/UHF multimode rigs, while the ICOM grew out of shrunken HF rigs, the Kenwood TS-50 being the first. Surprisingly, Kenwood no longer has anything to offer in that line.

Geoff.

Wow, thanks everyone for the great reports on
the lttle Yaesu transceiver!

I am contemplating it mainly for its ears.

I wanted to order the optional Collins 300 cycle filter
for CW work, but had hazy memories from 55 years ago
that such filters tended to cause unwanted "ringing"
of the output audio, kinda like a steady loud output "hiss".

When I left Ham Radio in 1955, the QRPp experts were
playing with "active filters" for low power QRP work.

If I remember correctly, such filters would block _all_   the
signal, noise and everything, then open up a 30 cycle "window"
for a brief while when the "start" of a dot or dash
was liable to occur.

The entire mess, transmitter and distant receiver was sync'd with
the WWV time signal, to open and close the receiver's active filters
during automatic CW transmission.

The incoming dot or dash audio would be re-generated artificially
by a separate audio circuit in the receiver.

QRP advocates claimed they could get on a crowded voice band,
and pump a low power CW signal through at a slow speed
of a few words-per-minute.

Switching Gears -
****

Does anyone know if the FCC still requires at least 50 RF watts
to legally drive a linear amplifier?

There was talk that they might change that requirement so that
low power rigs like the Yaesu could drive an amplifier.

Of course, nothing to stop a ham from building his own
intermediate amplifier, but cleaning up all the harmonics is
a major concern.

Mark

There is an amp made specifically for the FT-817. The Tokyo Hy-Power
HL45B. I use one with my barefoot K3.

Sharp frequency-domain filter cutoff, comes along with blurry time-domain cutoff... you can't entirely avoid that.

Narrow-bandwidth filters aren't all equal, though, even for the same -3 dB bandwidth. Different filter alignments cause different amounts of frequency-domain (pass-band and stop-band) ripple, and different amounts of ringing and phase shift. Some types seem to be easier on the ear (and the whole ear/brain system) than others.

Another, more modern approach is to use digital filtering techniques (either with a DSP chip, or with a personal computer acting as a DSP). By using finite-impulse-response digital filters, you can get a wider range of time- and phase-relative behaviors than you can with an IIR analog filter.

This sounds like the "synchronous CW" approach. As you indicate, it requires extremely careful time-base matching at the sending and receiving ends.

I do recall reading of some work being done with computer-assisted CW some years ago. It seems to have lost out in popularity to other digital modulation modes such as PSK31, which have many of the same benefits for narrow bandwidth but which don't require tightly-synchronized clocks.

At the other end of the speed range, are some very-high-speed CW and digital modes used for things like meteor scatter communications.

>Switching Gears -
>*********
>
>Does anyone know if the FCC still requires at least 50 RF watts
>to legally drive a linear amplifier?

The current standards (Part 97, sections 315 and 317) say:

- Commercially-built amplifiers capable of operating below 144 MHz must be certificated in order to be sold or modified.

- To be certificated, an external amplifier may not amplify the RF input signal by more than 15 dB.

- To be certificated, an external amplifier must not amplify signals between 26 MHz and 28 MHz at all (0 dB gain maximum).

- The above restrictions do not apply to external power amplifiers which are made by, or modified by, a licensed amateur radio operator for use at an amateur radio station.

So, yeah, if you want to buy a amplifier which can deliver "legal limit" power of 1500 watts of HF, you need to plan on driving it with at least 50 watts or so. If you want a hotter rig, you'll either have to construct it yourself, modify a commercial amplifier, add an external intermediate amplifier stage, or cheat.

>There was talk that they might change that requirement so that
>low power rigs like the Yaesu could drive an amplifier.

Well, low-power rigs *can* drive an external amplifier... just not all the way up to legal-limit in one step. A 5-watt Yaesu could drive a 15 dB linear amp up to around 150 watts of RF output - this is more output than most "barefoot" single-box HF rigs are capable of, and is less likely to accidentally ignite the neighbor's cat than a legal-limit setup.

Thanks for the comprehensive rundown, I will check them all.

Regular telephone service in these mountains of northern CA
is unreliable, quite a few older folks here are in a real pickle
when the phones go out.

That is one of the reasons I decided to reactivate my ham ticket.

Main reason of course is just out-and-out fun   :)

Yeah, they are cute little buggers.   Here, we are all way beyond
cell-phone range, so a few hams sprinkled around here can do a
lot of good in an emergency.

I will check out the 857D and 897D, just to make sure I have
covered all the bases; thanks for mentioning those models.

That sounds great, were no satellites when I was active.

Another thing I want to do is to get a quarter-wave antenna
up for the 160 meter band, to shove a ground wave.

I think that would be a vertical about 132 feet high, I had
better check the local FAA/FCC regulations in these mountains,
to see if that is legal for the helicopters that sometimes
cruise this area.

Probably not legal, so better think in terms of a top-loaded
vertical about 60 feet high, voltage-fed at the ground end.

In the old days I shoved a ground-wave 400 miles, from a
10 foot whip antenna on the rear end of a sailboat, with 10 watts.

A decent antenna should do much better.

Ahh, that is great, 100 watts of RF will keep me happy.

In the old days I had a neighbor whose porch light went on/off
when I was active.   I had to crawl under his house and bond the
joints of his water pipes to get rid of his blinking porch light.

Seems to me the upper power limit in those days was 1,000 watts,
but I probably remember it incorrectly.

Thanks for the latest regulations, my 2010 ARRL handbook has not arrived in the mail yet, due any day now.

I'm not sure when, but it changed from 1500 Watts input to 1,000 Watts output.

1,000 Watts is a lot of power and may not be of much use, depending upon what you want to do with it. The difference between 100 watts and 1,000 is not very much when the band is open and not crowded, in a contest it may be the difference between making contacts and getting lost in the pileup.

You mentioned you were in the hills of California, if you want something that is (almost) 100% reliable for an emergency a satellite phone might be better.

In another thread in an another group, I mentioned the ELT (emergency locator transmitters) that at one time were sold only for airplanes being available for hikers, etc. The original poster said they are now down to around $100 each, which makes them a viable option for your car if you think you may end up in a ditch with no cell phone coverage and out of the range of any radios.

Welcome back, btw, you can ask for your old call if it has not be taken
by someone else.

73,

Geoff.

You'll notice the K3 is the #1 transceiver in every class (depending on configuration). While it costs twice what the Yaesu does, it can grow with you. It is made in USA and is the best radio ever made.

Ahh, so _that_ is what it is now, 1000 watts RF _output_ , okay.

> You mentioned you were in the hills of California, if you want
> something that is (almost) 100% reliable for an emergency

I used to have one about ten years ago, when a bunch of us motorcycle riders commonly cruised the scenic mountains here in northern California, again well beyond cell-phone range. If one of us bikers got in trouble, it was my job to call in a chopper.

Beware, OT Rant Coming Up
****

My 'cycle license is still valid, but now I have enough sense to avoid motorcycles. <g>

For 7 years, I worked as a motorcycle messinger in the Los Angeles area, never had an accident, except for one time.

An older gentleman edged onto the freeway from an on-ramp, going about 20 mph, cutting across all lanes into the fast lane, where I was going the "legal L.A. speed limit" of about 85 mph, along with all the other idiots.

I _almost_ managed to keep the bike upright, but not quite - - - dumped the bike at the last minute with my leg trapped underneath the heavy bike while it was sliding to a stop.

Last I saw of the old gentleman, he was still chugging away in the fast lane at 20 mph. <g>

I was lucky, a trucker behind me swung his rig broadside to block the fast lane, until the ambulance arrived to scrape me off the freeway.

Like with a horse, you have to get right back on again. I was back on the job in a few months, but very careful to avoid older car drivers.

What really bothers me is that the youngsters today do not properly train themselves to ride a motorcycle.   I traded in a new heavy Honda "Valkyrie" model, for an even heavier Honda "Gold Wing" model, the murdercycle that has a reverse gear, because it is too heavy to back up by using your feet, if you are on a slight downgrade.

A youngster bought my "Valkyrie" from the dealer I sold it to.

Youngster promptly killed himself a few weeks later, when he lost control of the Valkyrie on a turn.

I really think the laws should be changed, to force the youngsters to take the $50 3-day course from the MSF. (Motorcycle Safety Foundation)

MSF will not authorize a motorcycle license unless the youngster demonstrates competence by passing some rather stiff riding tests.

End of OT Rant -
****

> Welcome back, btw...

Thanks very much, I should have returned to ham radio long before now, as it is a great endeavor, in my opinion.

My daddy introduced it to me when I was about ten years old, it lead to a 34 year career in electronics, working in the research labs of what then was called Hughes Aircraft, later to be called Hughes Aerospace.

Many interesting projects during my career, such as working on the old robot series of spacecraft named "Surveyor", paving the way for manned spaceflight to the moon.

Back to beating the bushes, the enjoyable task of deciding which shiny new rig to purchase :)

Mark

The current limit on most bands is 1500 watts, Peak Envelope Power (which is an output-power measurement). It has been quite a while since the limit was specified in terms of input power to the final amplifier.

>1,000 Watts is a lot of power and may not be of much use, depending upon

Correct.

WOW !!! - Thanks, that is one serious rig from elecraft.com

Downloaded their pdf file and drooled over the features and spec's.

Egad, everything seemed so simple, now I have to decide what I
really want in a rig.

You know what this means, I will need to park my carcass in the
parking lot of the nearest Walmart, hold up my cardboard sign
begging for money for Ham Radio gear.

I do free volunteer work for the local hospitals here in N. California,
trying to beat them into submission to adopt faster/better ways of
processing their mountains of paperwork.

Presently, most of them still use chisels and clay tablets
to document their medical procedures.

Only about 10% of USA hospitals take advantage of faster
speech recognition processing of data. (SR for brevity)

As a half-vast user of SR myself, I am used to stomping out
medical data on my Macs and PCs by voice, commonly dictating
complex 600 word medical reports with zero text errors
in four minutes time, wrestling phrases such as:

"perioperative transesophageal echocardiography"

Have to admit though, sometimes my tongue gets wrapped around
my eye-teeth so I can't see what I am saying.

Back on topic -
****

Seems the Elecraft K3/100 HF Transceiver would be ideal for
expediting emergency medical data in case of a national
catastrophe - - - one problem might be that FCC reg's do not
allow encryption of sensitive medical data, if I recall correctly.

I expect in a national emergency that FCC edict would
be quickly waived, allowing common sense to prevail.

Mark

Everything works fine, till suddenly my FM audio becomes weak. Even call
signal (1750 Hz) can't go trough... I switch it off, than back on, and
it works fine for some 5-10 minutes.

Any clue?

Boris

Practically any modern SR software.

It is kinda like ham radio, not so much what you have,
but more important is how you use it.

In this case, I used "MacSpeech Dictate 1.5.8" on a 3-year old
MacBook Pro.

Mac has to be one of the newer Intel-based Macs, software
will not run on older Macs.

One can get the same results using "Dragon NaturallySpeaking"
 - - - the "Pro" version 10.1 - - - which I also run on my
old Mac hardware, using the Vista OS from Microsoft.

About the only modern speech software that is difficult to
achieve such accuracy and speed is "Windows Speech Recognition",
(WSR) - which comes free with both Vista and Windows-7 OS.

SR is a very inexact science at the present time, best estimates are
that it will take another 20 years before it is anywhere near as good
as a human, when it comes to converting speech to text.

http://www.kurzweilai.net/articles/art0267.html?printable=1

Scroll to near the end of the above website, to this sub-section:

"Building HAL 's Language Knowledge Base"

Read all the way to the end, that will give you a good idea
what our children will be doing with SR 20 years from now.

BTW, Nuance (Dragon) recently bought MacSpeech, so they are
all one company now.

A typical newbie SR user will be lucky to get 70% accuracy.

As he gains experience, that will edge up to about 98%.

In restricted speech like medical, where the same phrases like
"perioperative transesophageal echocardiography" are used
over and over again, the raw accuracy will edge up to 99%.

...or in my case 100%, in 3 out of 4 tries on that 600 word
example - - - the bad "4th" try is invariably my fault,
for mis-pronouncing one of the 600 words.

Too much time way OT, but I gave you a decent answer
to your question.

My post immediately following this will show the entire text
of my medical dictation, with 100% raw accuracy, no correction
required, total dictation time 240 seconds.

Mark

As promised, here is the entire medical text of approx' 600 words
----

New Surgical Procedure for Ischemic/Functional Mitral Regurgitation: Mitral Complex Remodeling

Hirokuni Arai, MD, PhD*, Fusahiko Itoh, MD, Takeshi Someya, MD, Keiji Oi, MD, PhD, Kiyoshi Tamura, MD, PhD, Hiroyuki Tanaka, MD, PhD

Department of Cardiothoracic Surgery, Tokyo Medical and Dental University Graduate School of Medicine, Tokyo, Japan

* Address correspondence to Dr Arai, Department of Cardiothoracic Surgery, Tokyo Medical and Dental University Graduate School of Medicine, 1-5-45 Yushima, Bunkyo-ku, Tokyo, 113-8519, Japan Email: hiro.tsrg@tmd.ac.jp

On-pump beating heart mitral complex remodeling was performed without aortic clamping. The mitral valve was exposed through a left atriotomy posterior to the interatrial groove. Interrupted 2-0 braided horizontal mattress sutures without pledgets were placed around the annulus to optimize exposure of the subvalvular apparatus. Secondary chords to the anterior leaflet from both papillary muscles were carefully separated from primary chords with a nerve hook and were divided.

Two pairs of 5-0 and 4-0 Gore-Tex sutures (W. L. Gore & Associates, Flagstaff, AZ) were each placed to both fibrous portions of the anterior and posterior papillary muscle tips, buttressed with pledgets of autologous pericardium. Two pairs of the free arms of the 5-0 Gore-Tex sutures were twice passed through the free edge of the middle portion of the anterior leaflet about 5 mm from the margin, from ventricular to atrial side. Suture length was adjusted to be the same length as the corresponding marginal chords, and the sutures were tied.

Each pair of the free arms of the 4-0 Gore-Tex sutures was passed through the posterior annulus at sites around the border of the lateral and middle portions and middle and medial portions of the annulus, respectively (annulopapillary suture), and was also passed through corresponding sites in the annuloplasty ring (Carpentier-Edwards Physio; Edwards Lifesciences, Irvine, CA). The 26-mm semi-rigid annuloplasty ring was then seated. The annulopapillary sutures were pulled to retract the papillary muscle tips closer to the annulus, to the point at which leaflet coaptation occurred in the plane of the mitral annulus during systole, to visually confirm no residual MR. Suture lengths were determined, and the sutures were tied.

To avoid air embolism, a vent cannula with a pressure-monitoring catheter (TOYOBO Co Ltd, Osaka, Japan) was inserted into the left ventricular apex and was connected to the suction circuit equipped with a small reservoir chamber (Senko Medical Instrument Mfg Ltd, Saitama, Japan). During the final adjustment of the annulopapillary suture length, this chamber was filled with blood, and the height of the fluid level of this chamber was adjusted to load the left ventricle. The left ventricular systolic pressure was monitored to keep it slightly lower than the systemic perfusion pressure to avoid ejection through the aortic valve.

This new technique has been performed on 3 patients with ischemic/functional MR. The patients were aged 61, 64, and 69 years; their ejection fractions were 0.34, 0.25, 0.32; their left ventricular diastolic diameters were 62, 74, and 79 mm; and tenting heights were 11, 12, and 14 mm, respectively. Preoperatively, all patients showed severe MR; perioperative transesophageal echocardiography showed disappearance of MR. Mitral valvular function has remained stable during a mean short-term follow-up of 6 months (range, 1 to 12 months), with no or trivial MR noted.

```

Hi all,

My father is busy equipping his vehicle for a few extended road trips
around Australia. Coverage of mobile phone services is spotty when
you get away from the major centres, and so I advised that having some

sort of backup communications would be a wise idea.

I myself am a licensed radio amateur, and if I go on the trips, I bring my radios... so that satisfies that. However, I've recently joined the workforce, thus in all probability won't be going on future trips. He's expressed an interest in getting an amateur license, but even if he doesn't ... having capability of using amateur bands in an emergency is useful.

I was therefore wondering what radios are available on the market that can do both amateur frequencies, and CB. Ideally looking for both HF CB (~27MHz SSB/AM) and UHF CB (476..478MHz FM), but even HF only is still useful. What we wish to avoid is having a plethora of antennae, control heads and microphones for individual band-specific radios.

I've set up a pair of Wouxun KG-UVD1Ps to do this -- they have all 40 UHF CB simplex channels as memory channels, followed by UHF CB repeaters 1-8 as channels 41 to 48... then 49: 146.500MHz FM, 50: 439.000MHz FM... and most Australian repeaters follow on in order of frequency.

However, being handhelds, makes them awkward for mobile use -- a mobile rig would be better, one which combined HF as well would be ideal.

Queries:
(1) Does anyone know of rigs that can do this out-of-the-box (like the Wouxun handhelds)?
(2) I've heard of the "freeband" mod that's available for some radios such as the Yaesu FT-897... what other radios can this be done on, and what are the pros/cons of doing this?

Regards,
Stuart Longland VK4MSL

I haven't got a '817... I instead opted for its 100W cousin, the '897D. The catch with all of these more modern "all-band" radios though, is the high level of integration. While it does shrink the size, it does mean the radio is more complex -- and thus repairs will be more expensive and difficult.

In my case, I'm waiting to hear from the insurance company about whether they'll cover the replacement of my set following lightning damage that took out a few diodes in the power section, fried the microphone preamp and finally nuked a DDS chip responsible for generating the carrier sidetone. The end result is a radio that at first, would not run off external power (this has been fixed), won't demodulate SSB (sounds like an AM receiver with the volume turned down), won't transmit AM/SSB/CW, and won't modulate a FM carrier. Due to the usage of multi-layer PCBs, it's impossible to fix tracks that may be damaged within the layers of the PCB... and the DDS chip in question is no longer manufactured or supported. In short, a write-off.

The lightning struck a tree in the neighbour's back yard, the resulting earth potential rise caused the above damage, as well as cooking some network equipment in our house, another neighbour's computer, and several electrical goods within the property where the strike occurred. So the old wisdom of unplugging everything is especially true for the modern rigs -- not just the antenna, but station earth and power as well!

Apart from this, they are great radios. Mine was brilliant, and I hope to get it replaced at some stage. Interestingly, on 2m SSB, I find my FT-290R II (with 25W linear) outperforms it on occasions, but given the capabilities of the '897, it's worth the money. I dare say the '817 is in much the same league, and are very popular amongst

microwave enthusiasts as they are all-mode and low-enough power to not
fry the backside out of transverters.

Yaesu FT-857, Yaesu FT-897, Kenwood TS-2000 are working fine on 27 MHz.
Others I didn't try.

Boris

In this world.. Anything is possible.. But I'm inclined to agree with you.. I'd like to say "I agree" but, frankly, I have met many folks that dumb

I can give you some links to places where you can read about people that dumb

http://www.darwinawards.com

http://www.thisistrue.com

True (This is true) story.. Man decides to rob a car wash

Employee leads him into the tunnel where the cash box is, Opens the cash
box and while the robber is distracted grabs one of the handy dandy guns
in the wash bay (A water gun of course) and sprays the jerk down..
Well.. It's January, and the state is Washington.. The would be robber
then fled the place,,,empty handed of course,, Made a "Clean Get-Away"
for about 20 yards or so.. Now remember his clothing was soaked with hot
(When it hit him) soapy water,, which quickly became cold, soapy ICE

I mean.. there are folks that dump.. Oh.. He made national news wires too.

And I know some even better over at Darwin Awards

The Darwin awards are awarded to those who best improve the human gene
pool by removal of themselves therefrom... In the most amazing manners.

Thanks for your comprehensive post on "all band" radios.

Sorry about the lightning frying your expensive rig; here I have
the same problems with lightning, came to the same conclusion
as you did, namely completely unplug   _ALL_   leads to my rig.

I have not yet decided which way to jump as regards buying
a rig after my long 55 year absence from ham radio:

1) Completely portable (ordinary alkaline battery powered)
     very low powered rig such as the Yaesu FT-817ND

2) Larger 100 watt mobile rig such as the Elecraft K3
      or the Yaesu 897D

The Yaesu 897D certainly has impressive spec's

Presently I do not have enough smarts to make an intelligent
choice between the Yaesu 897D as compared to the more
expensive Elecraft K3, when it comes to the fine points
of both those rigs.

With the Elecraft, I lose the mobile capability, however
Elecraft advocates are very impressed with that fine rig.

Decisions, decisions...   <g>

Mark

The 897 will accommodate two battery packs and (or is it _or_?) a built-in power supply. They're on my purchase list -- after we get the tax refund or when I win the lottery.

> The Yaesu 897D certainly has impressive spec's

Enough so that I have, and use, two of them. In their price class, they are very impressive radios. I just swapped my Yaesu FT-450AT for one yesterday, and that rig got K7SDW on 20 m with 10W output CW yesterday afternoon, first crack off the bat.

> Presently I do not have enough smarts to make an intelligent

I suspect that the K3 is, overall, the better radio, though it doesn't do 70 cm. At least it doesn't do 70 cm _yet_; I suspect a 70cm transverter board is in the works, though I have no hard info on that. I'll get one when I win the lottery.

> With the Elecraft, I lose the mobile capability, however
> Elecraft advocates are very impressed with that fine rig.

I've certainly read rave reviews on the K3. Acquisition is dependent on coming into a sizeable bolus of cash, though. I'd also like to have a Flex 5000 to play with, and an Icom 7[678]00, and a KW TS-2000, and a Yaesu FT-2000, and some W-J or Cubic receivers, and ... .

> Decisions, decisions...   <g>

Yeah, but not the kind that hurt.

You need to contact the local licensing authorities and see what is legal.
For example, in the US, what you ask would simply not be illegal, either for
27mHz CB or 464mHz (family radio, what you call UHF CB).

In other parts of the world things are more relaxed, many people use ham
rigs on CB with no problems.

> Queries:
> (1) Does anyone know of rigs that can do this out-of-the-box (like the
> Wouxun handhelds)?

There are lots of them that will do the VHF up to 440 mHz (the top if the 70cm band in the US). I have no idea if they will go any higher, but isn't the UHF CB band 446mHz there? It is here. (I think you said something, but I trimmed that part of the post before I got here).

> (2) I've heard of the "freeband" mod that's available for some radios
> such as the Yaesu FT-897... what other radios can this be done on, and
> what are the pros/cons of doing this?

Technicaly nothing at all. The radios are designed to transmit that range and can do it. Some frequencies may be a problem due to the design of the radio, but I don't think the ones you are worried about will be.

Note that ham radios do not transmit AM, they transmit double sideband reduce carrier, i.e. both on USB and LSB at the same time when in AM mode. This usually works ok on AM receivers, but it may not work on some cheap CB's. It pays to ask anyone who is doing it if they have a problem.

Legally may be another issue. Having a transmitter that transmits outside of the ham bands is illegal in some parts of the world, I have no idea of what happens in OZ.

Also is it legal for your father to be driving around with a ham radio in the car, and possible using it (although not on ham frequencies)?

The Elecraft K3 seems to have one of the best RF front ends currently
available on an amateur radio. It does extremely well at pulling in a
weak signal, when there are very strong signals on nearby frequencies.
If you're into contesting, DX, or Field Day competition, this looks
like radio to have.

For what's worth - the FD-857D is almost the same as the FT-897D in
most respects - just in a smaller package. These two radios give you
2-meter and 440 capability, in addition to HF and 6 meters.

Thanks for the reply, John.

Well my response is a little different. Something like, "We haven't done anything yet.... reapply."

I really don't have the time, but I guess I will start tracing out the circuit.

73,
Emil
W9NM

I have the MFJ-1782, unfortunately also without schematic. However in
reading the warranty terms MFJ appears to be generous in technical
assistance for DIY repairs under warranty. Why not give them a call
again and see what they can do in your situation.

I have always heard part of the 'fun' of Amateur Radio, is self instruction. Since the MFJ-1786 Manual is readibly downloaded from several source; and the fact it goes into very detailed 'theory of operation', you probably don't really need a schematic drawing. Rather than a schematic, I'd suggest appealing to users, for someone to take good [and multiple] digital photos, then you can use them as a 'pictorial', and compare to your unit. Someone said 'a picture is worth a thousand words' ; and they can help, if you actually do a reverse engineering, and produce a schematic.

To me, the fun part is designing and scratch building equipment several orders of magnitude past this MFJ Box.   I took my Amateur Radio exams when one was required to draw schematics and write answers to essay questions and actual use equations... that was during my freshman year in high school, and about a month later I passed my 1st Class Commercial with Ship-Radar and Radiotelegraph Endorsements. Actually, do to circumstances of 'life', when I have let my tickets lapse, I've probably retested for Commercial and Amateur Extra 4 or 5 times each over the years. And... I had to walk 30 miles (one way) to Chicago to the FCC Field Office... up hill, both directions.

The context of the MFJ control box, to me, is the same as my kitchen AM radio. If it doesn't work, I want to fix it, expeditiously, and be on my way. There really isn't 'detailed' theory to deal with in the MFJ Box or my

AM Radio that was not covered in my high school Physics Class many many years ago... of course today, it my seem complicated to many. Those multiple choice questions are a real killer... you need to read over the pre-published answers. Is that 'reverse engineering'?

There is nothing secret or revolutionary about the MFJ control box. After using the box for 10 seconds it is manifestly apparent how the circuitry functions. I do not have the time to waste tracing PC board foil, removing and bridging components to find there values, let alone dealing with parts that don't have a trade-standard part number. If that is exciting to you... I guess everyone has their own particular level of abilities.

Plodding along, hit or miss, hoping to stumble across the defective component(s) is the type of endeavor I'll leave to others.

Why in the world would I appeal to anyone for pictures when I have the actual device sitting on my work bench? The components that had an physical anomaly associated with their defective condition have been replaced.

A picture is worth a thousand words if it is a schematic... and worth much more than that if it is valid set of equations.

If I need some "Already been done." electronic' stimulation I can page through my Patents, EE Degree Thesis, books and papers, equipment I have designed and constructed, and patents granted and denied.

My preference is for new projects under way... finding another original project... or, for that matter... just sit down at the key and spend an evening on the CW sub-bands. I'll leave the reverse-engineering to others that are much more easily satisfied with that type of thing. My appliances, however, I want a schematic and parts list... and be on the road again as quickly as possible.

Hey... thanks for your comments... but I'm ONLY looking for a SCHEMATIC... not a lecture or assumptions concerning my technical knowledge.

Emil

Joe, thanks. I may give it one more try. Frankly, I've got more time invested in this toy than is warranted for a stand-by... use with experimental projects... type of antenna.

If I can set aside some time this winter, I may build a proper, vector measuring, controller for the loop. As I look around the bench, I can see just about everything I need, except for a few toroid cores that will need winding... not on list of favorites to do right now... the older I get, the less I am enamored of programming in assembly language. However, I still have a pile of PICs sitting around and feel obligated to use one or two on something from time to time... if I can shoe-horn one into a project.

If I can get a schematic I'll let you know.
Merry Christmas,
Emil

Hi

Just about to make a dipole and have enough parts to make but only want to climb once. 50 ft tower and lots of ladder line, coax, a 1:1 balun and lots of copper wire and a nice manual tuner that has its own balun for hook up to either the ladder line or coax.

Any idea which is best possible and practical application? Should I use the ladder line or coax? Do I need the balun? I hope to use it for 10-160 as this is what the rig is capable of.

Any advice or adeas or tricks of the trade are greatly appreciated, I hope to only climb once, what works best?

thanks
Ron

Hi Ron.

You might find that a pulley at the top of the 50ft tower will be a help.
Lets you raise and lower the dipole whenever you want without having to

climb.
You might need a stand-off arm to hold the pulley away from the tower to
that the dipole doesn't actually touch the tower.

73, Rog.

Hi hi

thanks for the tips.

What about the dipole? I have a 1:1 balun and both ladder line and coax.
Which is prefered?

Also I wish to center feed the dipole at the top of the tower, approx 4ft
away from the tower itself and then I can put a leg at about 150 degrees,
not a straight 180 degrees. So a little bit offset but one leg can be about
approx 50 foot then begins to slop over a tree and then other is about 60
foot before it begins to slop over a tree about same height.

The tuner has its own balun, I believe that is if I use the ladder line. It
is a manual mfj I think.

The pully is good idea, looking at the half sloper or taping into the tower
seems a bit complicated, all the houses around here are all aluminum siding.

What about the balun and ladder line or coax? Which is preferred?

thanks

73

Once before I purchased a dipole at a hamfest and it was for all bands, I forget all the dimensions and lengths but it was copper wire fed through this 1:1 balun to coax. Rather long copper flat top style dipole, probably 60 foot each leg.

My option now is to replace the old copper wire and coax, but do I need to use the balun?

I am looking at building the G5RV antenna style dipole but without the balun but using the coax. I can connect it to the manual mfj tuner.

So what I am thinking is about 60 foot of coax, right from the tuner to the split attachment of the two legs of copper wire. Both split about 50 foot in the air at the top of the tower, then go to slop over the top of nearby trees which are also about 45 or 50 foot tall. But there will be short pieces (approx 10 foot) of left over ends that must slop over the trees and come down the other side. Not enough room in the yard.

No balun, using the coax, only about 150 watts will every be used.

Any reasons why this is not a good idea? Seems most practical for my situation here.

thanks for any tips

73

>What about the dipole? I have a 1:1 balun and both ladder line and coax.
>Which is prefered?

If you want to work a wide range of bands with a single center-fed doublet, I think you'll have more success using ladder-line, and feeding directly from the balanced output of your tuner. If your tuner has only a non-balanced (coaxial) output, I'd suggest using a 1:1 choke (current balun") as close as is practical to the tuner output, and then transitioning over to ladder line.

If you're using coax, and a balun at the top, you may find yourself suffering from significant losses in the coax at high SWRs. Using ladder or open-wire line, with its higher characteristic impedance, can reduce these excess losses quite a bit (although not entirely eliminate them).

Are you firm about using a center-fed doublet/dipole? A number of people I know are very positive about their "off-center-fed" dipoles... these can work as coax-fed antennas (using a 4:1 or 6:1 balun at the feedpoint) on a set of harmonically-related bands (e.g. 80/40/20/10). Another option here is to use an off-center-fed wire, but feed it with ladder line (no balun at the feedpoint)... gives even more band coverage.

These OCF antennas are typically fed at a point around 2/3 of the way along the length (e.g. one arm is around twice the length of the other) and are cut to a length which is halfwave-resonant on the lowest band being used.

An example is the Alpha Delta DC-OCF - 135 feet long (legs are 45 and 90 feet), 6:1 balun at the feedpoint, coax-fed, covers 80/40/20/17/12/10 meters "No tuner required". It covers the lower end of 6 meters pretty well, and the higher frequencies with an increased SWR ("use with caution", presumably to avoid overstressing the balun and transmitter).

Most of these doublet/dipole antennas can also be treated as a top-loaded vertical, and fed Marconi-style (short the two sides of the feedline together, connect to the "hot" side of the tuner, and feed the ground side of the tuner to a good bed of radials). This can let you work lower-frequency bands (e.g. 160) on an antenna that by itself is too short to load up properly at such a low frequency.

Nice explaination,,

I understand it a lot better now, I like your idea of the off centre advantages especially when the tree distances are off,
should work out ok, unless I cut one of my neighbor's tree,,,, might look too planned.

Any good ideas for a homebrew omni on the top of the 50ft tower?

I also have a couple hd antennas I must get higher, the dish is on there but lower.

I would like to put a whip on the top mast, half way down the masting put the two hd antennas for tv (I figure one aiming north, one south (my local's station most direction)) then tee that up then there at the top of tower tie in a OCF dipole towards two trees.

The chap at the electronic store who sold me the hd antennas said it is better to do it this way or to have the router. Any body confirm or deny that? only a hundred bucks worth of parts there so not much but great signal and high def.

thanks again for your experteeze on the topic, my plan is to minimize the climbing.

For which band or bands? 2 meters? If so, you could install a homebrew J-pole (these are easily made from copper pipe), or a simple quarter-wave whip with a few ground radials bent down at a 45-degree angle (two radials is enough for a very functional ground plane).

There are fancier omni antennas available, depending on what frequencies you want to work, how much gain you need, and how much you want to spend. A 1.25-wavelength "extended double zepp" made out of copper pipe, side-mounted at the top of the tower, would give you a few dB of gain compared to a J-pole or ground-plane.

Well, let's see. "HD" antennas aren't fundamentally any different than decent analog-TV antennas - the RF has no idea whether it's carrying analog or digital modulations. What you want or need, in an ATSC (US digital TV) antenna, depends to a significant extent on which RF frequencies your local stations are using. In many areas, they're all up in the UHF band these days, and you can get away with a relatively small antenna... multi-bay bowtie-and-reflector antennas are popular.

In some areas (mostly urban) there are still stations transmitting digitally on the VHF bands - quite a few in the VHF "high band" (old channels 7-13) and a few still down in the VHF low-band (old channels 2-6). In these areas you'll need an antenna which is big enough to do a decent job on VHF... and the old UHF/VHF log-periodic rooftop antennas work just fine for this.

In general, you will get the best results with an antenna pointed fairly much towards the transmitter... you'll get some gain, and the antenna will be more likely to reject multipath reflections from nearby buildings and trees. If your local stations are split between mostly-north and mostly-south, then either using a bidirectional antenna, or a single antenna with a rotator, or a pair of fixed antennas with a selector switch, would make sense.

I wouldn't hook up two antennas (north and south) and just wire them in parallel... the signals will interfere and you could end up with worse results than you'd have gotten from a simple dipole.

A few HDTVs and set-top boxes now support a "smart antenna" control system. They can send a control signal (and some DC power) back up the coax to the antenna, allowing a multi-element antenna to switch a phasing network and thus "aim" itself electronically... no moving parts, just some phased beam-shaping. The DTV decoder / TV will "switch" the antenna around when channel-tuning, to figure out which beam pattern gives the cleanest signal.

Unfortunately, the control protocol and specs for this system aren't freely available, so I don't think it's possible to home-brew one.

Thanks for comming back,,,,

not for 2m but for hf.
Something that doesn't have to be too long and tunable with the mfj adjustable tuner.
I would like to use it also for 156 megs as I talk to the boats a lot and I know that is higher freq but would prefer to have the lower frequencies and if the tuner will keep it safe.

I have one with the three traps in the middle, it is rather long and believe it is meant to be on the ground.
I have a couple of those rings with 8 dimple male 1" insert stubs that allow 8 aluminum ground planes to be clamped on and if I keep them short enough the winds wont blow them down. So I have the parts, just need to know what the measurements or heights to be useful on as many busy bands, I don't think 160m would be practical.

Station monitor used but in perfect aesthetics conditions (see in
photo), there are only some imperfections due to the time.
The electronics is perfect, and the catodic ray tube works perfectly,
the item has been used as oscilloscope up to few days ago.

The auction includes:
Original box,
 manual copy (or if you don't want it, it's possible to download it
here)
Kenwood SM 220

The optional BS-8 is not included

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to
rec-radio-amateur-moderated-request@panix.com.

Hi all amongst other gear I use a Yaesu FRG-8800.
I have tried a google search on mw/lw mods for this receiver but no such
luck as yet.
Some one has done it but I have no idea how to go about it.

Can any one please point me n the right direction for this.

TIA.

Mike.

hi all
Does anybody have a spare FT767GX working PSU board i can buy?
Fed up trying to repair mine which has been virtually rebuilt but still
the 24v output is at 42 volts
12v now working ok
Any parts considered as also any help greatly received.

Andy

Posting-Frequency: 15th of each month

```
One significant omission, requiring immediate updates, for this article       |
is that it does not mention newer amateur radio newsgroups created since      |
it was written, including:                                                    |

 rec.radio.amateur.antenna                                                    |
 rec.radio.amateur.boatanchors                                                |
 rec.radio.amateur.dx                                                         |
 rec.radio.amateur.equipment                                                  |
 rec.radio.amateur.homebrew                                                      |
 rec.radio.amateur.moderated                                                     |
 rec.radio.amateur.space                                                         |
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

I have a palomar 200 it has a white face with 3 rocker switches. one
switch is for power one swiych for receive on or off the other switch
is for mode high or low. my question is where can i find some info on
this an what kind of power will it put out

Here is some "hep"

Palomar Electronics Corporation was a manufacturer of CB linear amplifiers in the 1960's and 1970's that used sweep tubes (now expensive) or bipolar RF transistors.
http://www.cbtricks.com/Amp/palomar/index.htm
These units were illegal for usage on CB (27 MHz/11 meters) ... and NOT designed for the amateur radio service (10 meters). They sold hundreds of thousands of these units -- most are in garages, basements or tossed in junk with 8-track tape units.
http://www.cbtricks.com/Amp/palomar/...bile/index.htm

The company went out of business around 1980. Since that time many builders and manufacturers in southwest USA and Mexico completely copied the earlier Palomar design and sold these through truck stops and other CB merchants.
http://www.palomar-engineers.com/Palomar/palomar.html

If you are just starting out in Ham radio, its not a good place to start.

Here is a link to a photo of the Palomar 200 mobile:
http://www.cbtricks.com/Amp/palomar/200_mobile/index.htm
http://www.cbtricks.com/Amp/palomar/200_mobile/tour/index.htm

A warning about these things...

A few years ago, a local ham bought a tube CB amp from an estate sale, thinking he could use it on 10 meters. He asked me to check it out before putting it on the air.

Being a paranoid type, even though the thing hadn't been plugged in for about two weeks, I kept my fingers away from the tubes & measured the voltage on the plate caps before doing anything else.

400 VOLTS.

(I think I got as much of a shock from reading the voltmeter as I would have if I'd touched the HV circuit!)

After discharging things, I traced the wiring. And was not at all surprised to find there was NO BLEEDER. Nothing to discharge the HV after switchoff. Obviously the filter capacitors were in good shape though!

In other words, these things are physically dangerous.

(I would imagine the signal quality wouldn't be very good either...)

OK it is a computer soundcard solution but would a netbook with a solid state drive to cope with the foundation not be viable? Small, compact, uses little power and will drive Hell easily and is simple to use. With a little dismantling and repackaging, can easily be made watertight and even more shockproof and a custom Linux build can make it a turnkey appliance.

That would surely be a bit primitive in today's world.

If your main concern is the noise cancelling and your operatives can manage to operate a radio then the Motorola Mototrbo range of radios have exceptionally good noise cancelling. I have installed them in paper mills and power stations where it is impossible to speak to the person next to you because of the noise and they still work well. On one dem' the bosses refused to accept the operator was in the generator hall until they saw him there because the audio quality was so good.

<http://www.radio-links.co.uk/files/1180438189DP3400.pdf>

Sorry to all the wingers on   uk.radio.amateur   these are digital, hence the good audio processing. :-)

I don't use Hellschreiber, but it certainly works on a small Asus
netbook, under Linux.

Nick.

I have a PSK31 autospotter consisting of an Asus PC900A netbook ($200)
running Fldigi; an MFJ-1024 active antenna; and an ICOM R75.

http://pskreporter.info/pskmap.html

This computer has an 8 gig SSD and is very solidly constructed. I run
Puppy Linux 4.20 operating system.

Just install Wine, then Hellschrieber. I've tried it as I say, but
don't have it installed now, I use Digipan, instead.

You'll have to add it to the applications menu yourself of course, but
that isn't difficult.

I'm using it on the PC701G also with an 8Gb SSD

Nick.

i have 2 ARRL lightning calculator s .

excellent condition .

type A is for freq & wavelength

type B is for ohms law .

for the both of them i am asking $ 5 postpaid .

i do paypal as wbelsito@aol.com

thanks   WALT

Replacement belt clip for the Yaesu VX-8R hand-held radio. Replaces the stock belt clip.

Belt Clip is spring loaded, swivels, and locks with quick button release. Unlike some belt clips that will release your radio when the radio swivels 45 degrees or more, with this belt clip you "must" push the button to release the radio.

Stainless Steel bolt, washer, & Nut. Perfect for quick retrieval and replacement of the radio during field day or amateur radio operations. Leave the bet clip on your belt.

For photos and to order visit: http://HamClips.com

I'm trying to decide between the Icom IC-703 and Yaesu FT-817 for a portable QRP rig. I would probably get the optional narrow CW filter, which is available for each.

I have downloaded the user manuals for each but haven't been able to find much information about their built-in keyers.

IC-703 has a setup menu that chooses between a regular keyer and a bug. I assume that the regular keyer uses an iambic paddle, but it doesn't elaborate on how it works when the paddle is squeezed. Does it have dot and dash insertion? Does it have automatic character spacing?

The FT-817 has even less information about the keyer. How does it work with an iambic paddle?

I would appreciate any insight into the keyers, as well as any general comments comparing the two rigs.

73, Fred
K4DII

My opinion would be, will you be QRP all the time? If not the 703 would
be your best bet. If it is, the 817. Check out the eham.net site for
information,as wellas bth Yahoo newsgroups. Hope this helps. KE5LDO

Per your suggestion, I read some of the reviews on each at eham.com. My
impression is that most people like whichever one they have. None of
the reviews I read said anything about how the keyers work.

Comments from people that have had both, lean towards the IC-703.
Comments were made about the 703 having a very good built-in tuner, and
the 817 being too tiny.

Dale, W4OP, suggested that I consider the Elecraft K2 with its
outstanding receiver and low current drain. Eham reviews are mostly
positive, but my eyesight may not permit me to built one from the kit.

A quick check of E-Bay finds several 817s for sale, but no 703s or
Elecrafts.

73,
Fred

You can purchase the Elecraft 2, 3, or any of the others completely
built, also. I suffer the same problems with poor eyesight. KE5LDO

Unless things have changed (I have built 2 of the K2's) Elecraft does not offer it built. They do however have independent builders they list on their WEBsite.
The K3 may be purchased built- of course it only involves non-soldering assembly of boards and panels anyway.

Last year I built an Anatek "blue" ESR meter kit that is probably quite
simple compared to the K2.  There were several times where I soldered
parts into the wrong holes!  After correcting the mistakes, it
eventually was finished and works well.

If I went with the K2, I'd build it myself.  It might take a while.

The one complaint I've read about the K2, was that it drifts noticeably.
The specs on the Elecraft web site and in the K2 owner's manual, are not
```

very clear. The manual does mention a 100 Hz warm-up drift, and an accuracy of "+/- 30 Hz over a 500 kHz range (typ) when calibrated". The calibration procedure seems a bit awkward.

The K3 kit would be a lot easier to assemble, and a TCXO option is available. On the other hand, the price of a 10 Watt K3 is somewhat high. With the ATU, TCXO and a roofing filter, the price is around $2000. An IC-703 might run around $1000, an FT-817 around $870.

73,
Fred

For a comparable setup, the FT-817 would need something like an LDG Z817 20 Watt autotuner. This would bring the cost to around $1000.

A comparably equipped K2 kit might run around $1300.

Hi, I bought the IC-92 AD and its software RS-92, which comes on a CD.
It's been a year, been busy, hadn't had a time to mess with the
software. The radio is daunting enough.

Now I try to install from the CD. It wants a "Product ID".

But there IS no product ID. There is a serial # for the radio and the
CD, there is a CD number, there are model numbers. But what the heck
is the Product ID?

Of course, there is no help file, no README, no clue. Googling and
trying to download the software again fail...

Total cognitive dissonance. Can anyone help? Rest assured I have done
the customer support routine without success. They are probably as
confounded as I.... :-(

Cheers, Andy

Wow, I am a young male and super computer literate and I have never had such an issue registering with a forum. The CAPTCHA was out of this world. Enough of this, on to the reason of this post:)

I have a GALAXY DX99V, which was once my fathers before he passed away. He had it in his truck. I need to run down to a radio shop to get it tested to be sure it works well, but I was wondering if I should sell this on EBAY or local? Where would I get the best price and what should I sell it for? Keep in mind I have absolutely no experience in these radios.

Thanks so much for the advice in advance

James

The Galaxy DX99V is a Mam Radio, Ten Meter Radio. It was designed for
Amateur Radio Operators to operate on the Ten Meter Ham Band. I had
one (bought new for $289.00 several years ago) but one could probably
get $50 - $70 for a really good used one now.

A side note, I don't know if your father was a licensed Ham Operator
or
not, but a lot of truckers bought these to illegally communciate with
each
other instead of using CB radio's. Very common problem even today.

Here's info on the radio direct from Galaxy ...
http://www.galaxyradios.com/99.html

Contact a local Ham Operator for further advice.

Problem solved, no thanks to ICOM America:

how to construct the "Product ID" :

- Take the main body of the CD number minus the prefix and suffix, add a dash and then the serial number from the CD.

- FOR EXAMPLE, if the CD number is CD-123456-789 and the Serial number is 009876 then the Product ID is

    123456-009876

ICOMAmerica did not, would not give me this information. I think their policy is <wicket stupit>.

<rant>

If a guy has a ticket and has paid almost $750 for their gear and the CD and still has the gear and the CD and the ticket, which is FCC verifiable, then he is most likely legit. So their workers should have the authority to give him the algorithm for constructing the Product ID. Or just give him the numbers.

Their people need to figure out another way. Make the person register with his call sign. Once he's registered then send him the numbers.

No one with half a brain will hazard his ticket, especially an advanced class, to steal a program, especially after having paid $750 bucks. The present policy alienates a host of loyal customers to try to foil a minority of idiots who are too cheap to ever buy their products anyhow.

And furthermore... You can download the manual from ICOM America for the radio but NOT the software!! I did find mod.dk that had a scanned copy. But it is only a two pager and very sparse, although it does give the algorithm above. The rest of the program? Sheesh...

Oh! And another thing. The cable that comes with the RS-92 software is a SERIAL RS-232C cable. Good grief!! Who uses RS-232C? Only the brain dead about USB... Needless to say, my laptop does not have an RS-232C port. I've found a nice adapter at Radio Shack, now to see if the software can recognize it... :-(

But again, Good Grief! If someone has given you all this money then make their life easy!!!

</rant>

So, they make great gear but are very short on customer relations.... :-(

Yoh! ICOM! Do better!!!

Cheers, Andy

Hi all, I'm looking to buy an RMK706 accessory pack for my IC-706MKIIG
so I can use the rig conveniently in my car. This kit, which includes
the two brackets and the cable, is hard to find in the UK. Does anyone
have this item (often bundled with a new Icom in some parts of the
world) new or used? Payment could be by PayPal if we have a deal.
Please email me with details of the cost including postage.
Many thanks, Allan g3pyw (QTHR)   email: g3pyw@amsat.org

I've had an inquiry about a Lafayette crystal controlled scanner from the 1980s. The type was MM-505 or mm505, it was black with white buttons. Does anyone know this receiver, as I can't find any reference to it on the internet? Any help is greatly appreciated.

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

As I understand the TS-520, it has tuned circuits plus a heterodyne crystal for each band. You could sacrifice 40 Meters, retune the coils for 30 Meters, and change the 40 Meter heterodyne crystal for one that is 3 Mhz higher. In theory, it would then tune from 10.0 MHz when the dial indicated tuning from 7.0 MHz.

Retuning the coils might be as simple as changing a tap on a coil or replacing a capacitor in a parallel-tuned circuit. Doesn't the TS-530 have the WARC bands included? You might look at it for ideas on how best to modify the TS-520.

Be careful, since you could easily end up transmitting outside the Ham bands!

73,
Fred

I just picked up a TS-520 at a local hamfest. It receives 30 meters with
no problem, with the WWV monitor switching, so I thought it may not be
so difficult to add the transmit too. I read about someone doing that
with a TS-180, which I know nothing about those radios. Years ago I took
out 40 and put in 30 meters on a HW-8 QRP rig. It was easier going up
frequency than it would have been if I took out 20 meters instead.

Maybe. Certainly you're part way there. There's the position on the
bandswitch, the crystal oscillator and low level tuned circuits.

The key part may be that there's no contacts for the transmitter tuned
circuits on the bandswitch. So there's no place to solder tuned circuits
for transmitting. So you have to find a similar switch with similar
contacts and transplant them into the rig, then add the tuned circuits.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original

article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to

Nice one of a kind solid brass straight key, on oak base. Real nice looking
and feels great. My carpel tunnel is saying no to CW at this time..

This key was made by a ham in 4 land.

Pictures by e-mail   Accepting best reasonable offer..

Radio Shack Pro 76 hand held 200 channel scanner.. Runs on 4 AA cells.

Also best reasonable offer..   Pic by e-mail..

I am looking for a Hy-Gain AV-18VS antenna.

Mike WB2GLW

LOT of TEN or Singles.
Minicircuits ZKL-1R5 [ZKL1R5] RF MICROWAVE AMPLIFIER(s), Wideband
10MHz-1.5GHz.
High-end Amps, MedPower +18.7dBm, LowNoise 3dB, Gain 39-40dB. NEW -
in original Minicircuits/antistatic packaging (never used, USA origin
& location, ships worldwide).
Either Singles or entire LOT (price shown for a Lot, but message us if
you want single(s) - shipping is CHEAPER than shown ($5.20), etc.
however on a quantity basis you save by dealing as a Lot, not Singles
- message us if you just need a few, not all 10 units).

Posted on Ebay, item# 330371507322 - goto www.ebay.com & enter
330371507322 into search. "BuyNow" OPTION is AVAILABLE - NO need to
wait for Auction ending.
Contact via Ebay (best) or Email. By Email, can hit "Reply" in

Newsgroups but REMOVE "nospam" strings if appears in my address (edit address manually, but sometimes it=92s already done) so I could respond from a real address/name. Do NOT reply on Newsgroups (I posted here, but will NOT read), and if I get much spam that address will be DISABLED, so you'll have to communicate via Ebay (which, incidentally, is more secure anyway). My Ebay feedback is 100% positive, not to mention 14 YEARS of Newsgroups trading without complains. Again, description is on Ebay but a few facts are copied here (for convenience):

** TECHNICAL SPECS:
A DATASHEET PDF is at manufacturer's site www.minicircuits.com-->enter "ZKL-1R5" into search--> datasheet (do not omit dash, ZKL1R5 instead of ZKL-1R5 will result in an error); so only a few specs are copied below. Finally, check the price Minicircuits is asking - $150/unit, we're asking $39 "auction start" & $56 "buynow" options - new/sealed units but @33% cost (reason to sell is explained below)
** PHOTOS are at EXTERNAL SERVER (as I CANNOT POST on EBAY for free beyond 1st free photo); at http://photos.starium.org ----> select Gallery named "Minicircuits ZKL-1R5"..
=95 Wideband, 10MHz to 1.500 GHz
=95 IP3 +31 dBm typ.
=95 LowNoise 3 dB typ. (not bad for a MedPower amp, rather than dedicated LNA)
=95 Gain 40 dB typ., Flatness 1.2dB
=95 VSWR IN 1.4, OUT 1.6
=95 P1dB Compression Point +15dB min, however charts indicate 17.6 to 18.7dBm
=95 Connectors - SMA (50 Ohm impedance), gold-plated.
=95 DCpower +12V nom @115mA max, but will take a range of 9-13V or wider.
=95 More data, plots, etc. are in a datasheet (PDF) downloadable from manufacturer's website.
Example of applications: communication systems e.g. cellular, satellite distribution, GSM/ISM; Radars, we're using them in a Middle-Stage Amplifier block in an MRI (magnetic) scientific instrument.

** REASON to SELL::
Our RF Engineer has changed Product design in which this amplifier was previously used (a scientific instrument); so not all purchased lots of ZKL-1R5 could be finished before new design "kicked in". In the new design, ZKL1R5 overloads the newly designed next amplifying stage (which became more sensitive) & we don't know a clean way to attenuate ZKL1R5's gain (38-40dB!, lowering powersupply is not a solution & not enough). So instead we switched to using ZFL-500 amps with lower gain & narrower bandwidth (0.5Ghz, in fact all we need is 0.2GHz, not even 0.5GHz). Minicircuit's policy is not to take them back & it's laborious to try to retrofit these into a new system - it's better if we simply sell, at a loss or not, but it's easier. We're already stocked on 60 ZFL-500's, so design change is permanent/verified.

I, in fact, come from a competing RF company (not to be mentioned) so not interested in promoting Minicircuits, but this is one of

Minicircuits better models; as far as I know it's using Gallium/Indium PHEMT/etc. FET=92s or something to that effect, not surprising but $150 price is already difficult to attain, yet we ask even 3-4x times less or to exchange for ZFL500 (Minicircuits said =91no=94). It's a pity at the new company where I moved in 2008, which is using RF Amps (not designing them), we cannot use ZKL1R5 due to gain excessive for a new design (was normal in an older design), also we decided don't need 1.5GHz expensive amps considering our signals are under 200MHz.

P.S. Again, more photos are at that http://photos.starium.org site - pictures are better than a lengthy verbal description.

For Sale - MFJ VersaTuner V Model MFJ-989C

The MFJ-989C roller inductor tuner is a 3000 watt PEP input, 1500 watt PEP output antenna tuner. These power ratings are for load impedance's of 35-500 ohms. The MFJ-989C is designed to match 50 ohm output amplifiers, transmitters or transceivers to virtually any antenna. Peak and average forward power, reflected power, and SWR are displayed on the MFJ-989C's illuminated cross-needle meter.

Pictures and information:

http://www.mfjenterprises.com/man/pdf/MFJ-989C.pdf

http://www.universal-radio.com/catalog/hamtune/1332c.html

http://www.g3ynh.info/atu/mfj989c.html

http://www.ham.dmz.ro/antenna_tuners/mfj/mfj-989c.php

This unit is guaranteed to not be DOA.

It is working perfectly.

Reason for sale - Had a chance to upgrade to an MFJ-998 IntelliTuner and did so.

Will be boxed in a USPS mailing box.

Styrofoam cut-outs at each end to protect binding posts and knobs.

Bubble wrap or foam peanuts for protection.

Price: $225 plus $15 for USPS box and mailing costs.

Contact - Sam, K7SAM at k7sam@arrl.net

Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.1 2009/04/12 19:42:04
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

I have yet to find the adjustment to the Vox Delay on my TS-850; is it because I am overlooking it in the manual that has NO INDEX to help me find it, or doesn't the rig have such an adjustment? My lowly TS-430s has such adjustments...

In my TS-850 manual, on page 17, the picture at the top of the page shows
the back of the rig and all the VOX controls.
Item #18 being Anti-VOX, #19 being VOX Gain and #20 being VOX Delay.
All three are explained on page 18 of the manual in the right hand column.
All of the above are covered under the contents on page 2 as: 4. OPERATION,
4-1. OPERATING CONTROLS. pages 10 thru 19.

Sam - K7SAM

easier to find a pre-built one as the order lead time
from small wonder labs is months.

Hi all,
I was given a fantastic birthday present, my own domain :-)

So if you had troublke trying to remember http://web.telia.com/~u85920178/
then fear not for www.sm0vpo.com is the new URL.

Bery best regards from Harry - SM0VPO

Dear Friends,

I've a friend who own into his amplifier collection an HF Amplifier from
HARRIS model RF355 and he's trying to locate the information concerning the
commands to be sent over the serial RS232 line to drive the internal antenna
tuner automatically.
This kw HF amplifier was initially designed to follow an HARRIS RT1446
transceiver.
Could someone help in this search?
May be there are on this newsgroup some OM who worked in the past at HARRIS
communication division in the US or in the UK?

Many thanks in advance for the help.

Best 73's

pf, F5BQP

Just picked up a FT-990 and the lithium battery is dead. Can't find a
service manual with instructions on how to locate and replace the
battery.  Would appreciate an e-mail or copy of the replacement
instructions for the battery in the FT-990.  <k4wys@cox.net>

On my 450 there is a hole on the left side of the transceiver to ajust
the Vox
delay. I bet the 850 is simular. Look at the Operaters Manual on the
Vox operation.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

For Sale - MFJ VersaTuner V Model MFJ-989C

The MFJ-989C roller inductor tuner is a 3000 watt PEP input, 1500 watt PEP output antenna tuner. These power ratings are for load impedance's of 35-500 ohms. The MFJ-989C is designed to match 50 ohm output amplifiers, transmitters or transceivers to virtually any antenna. Peak and average forward power, reflected power, and SWR are displayed on the MFJ-989C's illuminated cross-needle meter.

Pictures and information:

http://www.mfjenterprises.com/man/pdf/MFJ-989C.pdf
http://www.universal-radio.com/catalog/hamtune/1332c.html
http://www.g3ynh.info/atu/mfj989c.html
http://www.ham.dmz.ro/antenna_tuners/mfj/mfj-989c.php

This unit is guaranteed to not be DOA.
It is working perfectly.
Reason for sale - Had a chance to upgrade to an MFJ-998 IntelliTuner and did so.

Will be boxed in a USPS mailing box.
Styrofoam cut-outs at each end to protect binding posts and knobs.
Bubble wrap or foam peanuts for protection.

Price: $200 plus $15 for USPS box and mailing costs.

Contact - Sam, K7SAM at k7sam@arrl.net

I'm in the process of restoring a WWII vintage transmitter.
So far I've been able to use all of the original parts but some
of the bleeder resistors in the HV supply are bad. Hoping
someone has these in their junkbox;

25K ohm 80 watt; these are 11.5" long and 1.125" in diameter,
ceramic with cartridge type ends. Made by Groves Corp (bit this isn't
important). Need at least two of these.

The other resistor is really one of those old style ceramic floor
heater elements. It has wire wound on a ceramic cone and
uses a standard light bulb base. 220 volts, 660 watts.
This monster is put in series with the primary of the plate
transformer for "low power tuning". Chuckle...

Steve

the big resistors are common at swap meets here, and the heating element is still available at some appliance stores (at least I've seen it there) and also at swap meets- you can just replace the heating element if you like, nichrome coils are readily available in various wattage/voltage combinations.

If you want to try a surplus store, try ford electronics in fullerton CA - they should have some of that kind of stuff - if I remember right the phone is 714 521 8080

Not exactly original but ceramic tubular resistors are still made
today by Vishay, Bourns, etc.

See e.g. HL10006Z25K00JJ

For the same wattage the modern ones are probably a factor of two
smaller.

Might want to think about a large-wattage 220V light bulb dropped in.

Light bulbs are interesting circuit elements, often usable on purpose
for the way the resistance increases as they heat up.

Tim.

Ohmite.

I just bought a 225 watt 2.5K last week from Allied.

Not when it's dividing the power in half?

The way you wrote the add, it does read like you put 3000w in and get
1500w out.

There wouldn't be a rating for the output power level, either you feed
too much into the input or it's okay.

Surely what you meant was that the tuner can handle a transmitter of a
certain power level, and that power level can either be measured as 3000w
input to its plates or 1500watts output. Which of course isn't two
different power levels, just a different method of measuring the power,
the former with metering inside the rig, the latter with a wattmeter on
the output of the rig.

I am sick of this thing sitting in my closet for the last 8 years, never
really learned how to use it, but it works fine and is in excellent
condition.  If any one is interested in this baby give me a holler...

Yaesu VX-8R / VX-3R Replacement Belt Clip

Replacement belt clip for Yaesu VX-8R hand-held radio. Replaces stock belt clip. (Shown with VX-8R)

Spring loaded belt clip, swivels, and locks with quick release. Perfect for quick retrieval and replacement of radio during field day or amateur radio operations. Uses 3M button to adhere to radio. Strong adhesion - confidently secures radio to your side. This is your answer to the stock belt clip that comes with the radio.

$19.97 shipped Free Cont. US!

Enjoy one of Yaesu's finest HTs with this improved belt clip!

Thank you & 73,
Jason

Posted-By: auto-faq 3.3.2 beta (PGPMoose V2.0, Perl 5.005)
Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.1 2009/04/12 19:42:04
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved

newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to
rec-radio-amateur-moderated-request@panix.com.

Hi,

I was wondering if the RAM module on the Quantar repeaters are the
same?
Can I use a RAM module from a UHF unit in a VHF one?

Regards,
Azad.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

Thanks for the extensive information! I find that using the Noscript
addon with Firefox blocks a _lot_ of unwanted and unnecessary and
malicious garbage on the Web.

With all good wishes,

Kevin, WB4AIO.

Well, good news and bad news -- the good news first. I want to let you know that I completed my graduate program at UNL successfully. It's been a dream of mine for nearly 4 decades to finish my doctorate. So you may now refer to me as Dr. K�AIZ. However, I prefer Art. The bad news is that I've run out of the "I'm busy with school" excuse. The six weeks of September/October I spent in California dealing with the illness and death of my mother took its toll on trying to complete the degree. So the time since her passing has consisted of 15 to 20 hour days trying to catch up on finishing a dissertation and preparing for a final defense oral exam. I hope I didn't cause too much consternation while I was distracted.

At the top of my "I really needed to" list is one of the more pleasurable things I put off. That is to recognize the dedication, talent, and insight offered by one of our own. Joe Eisenberg, K�NEB, is well known as a ham, an expert in kit building, and a photographer. He has given many presentations on kit building and the technical aspects of ham radio in venues ranging from club meetings to conventions. His enthusiasm is unmatched and the skill he brings to his endeavors is phenomenal.

CQ magazine noticed that, too. I am very pleased to acknowledge that Joe is now a contributing editor for the magazine. He is writing a column called "Kit Building" for each issue. I think you will find his columns interesting and well worth the time to read. I've been building electronics almost since Marconi twisted two wires together (or at least I feel that way sometime) and I find things to learn from Joe.

Congratulations, Joe. You are an asset to the Section, a great contributor to the hobby, and a wonderful friend to have.

I'll be playing more catch-up soon. Until then, enjoy winter, the hobby, and your family.

73,
Art K�AIZ

Hello

Sorry for getting back to you so late, had a lot going on.First let me start by telling you more about the radio. I got it about 10 years ago from a friend who bought it at a garage sale, I thought it was pretty neat and used it from time to time. However I do not no much about radios so it was just neat to explore and hear foriegn stations etc. As far as I can tell everything works great except that 1 of the display lights appear to be burned out. All antennaes are in perfect condition, and it has original power cord and manuals. There are some minor nicks at the corners of case but nothing bad or serious. I have had a lot of fun playing around on it, but not being a radio enthusiast, I never really knew what I was doing. I can recieve stations from all over as far as I can tell. There are plug ins on back for external antannaes but I have never tried them. If you have not seen the pictures there are some displayed at (radiobanter.com) in the equipment forums under (Sony CRF-230B).

We'll now on to a price, The main reason for sale is I really don't use it anymore. And I have seen people wanting these vintage radios. So I was seeing what people where interested to pay. I recieved a few e-mails asking 100 to 150 dollars but I think thats a little cheap. I am looking to get 250 to 300. I will be sending this letter to those that replied and hope for the best. I very much thank you for your time and interest and sorry it took so long to reply. Also some people have asked why I don't auction it, but I am not familiar with ebay or those sites. So let me see who replies and I will take best price.

Thanks to all,

Lucas - LukeOR@charter.net

- So far the two highest 2 bids for $325 and $350, I will let
it go at the end of one week to highest bidder,   Thanks   -

+---+
+---+

--
LukeOR

My old IC730 is giving me some problems with the TX audio. It used to
be fine, but I started getting poor audio reports. I checked my signal
with another reciever and my audio is quite distorted. I've posted a
sample at http://www.zshare.net/audio/696470222a13632b/ .
I've tried several mics and I'm pretty sure I'm not overdriving it.
Someone suggested it might be RF feedback, but it still happens when

using a dummy load and ferrites on the mic lead. I'm armed an oscilloscope and circuit diagrams, but if ayone could give any pointers on what I might look for I'd be very grateful.

Cheers
Tom 2E0WNT

Lightning damage to an MFJ-1786 control box. Looking for a schematic.
Thanks.

Can't get a response from MFJ.

Merry Christmas all,

Not an unusual response, I requested a schematic for the MFJ "parrot" repeater, I was met with a deafening silence too, but a repeat request elicited the following response:

"The information you have requested is not available."

No explanation, but I guess Martin F Jue is entitled to hold back what he considers "proprietary information".

Happy Christmas to all and a very health and happy new year!

73

Do you really need to lose some watts? Or do you just need to reduce the voltage to whatever you are driving? Maybe a capacitive voltage divider would do what you need.

C.I.A. Director Panetta is absolutely right when he says he wants to move his Agency forward, America faces a lot of issues right now, but some are from the past and will affect the present and the future of the Intelligence Community and here are some and that can be linked :

1) The Neocon and Oil Lobby's are constantly pushing for a fight

against Venezuela and Russia as well as Iran , because as long as they are the " enemy " and " terrorists linked " , America has only one solid source of oil and gas : Saudi Arabia-Qatar-UAE-Kuwait and only one strategic partner in that region :Israel, so they all get all our money, our weapons and attention, and when will the D.C. Politicians explain this to the American people ? when ? that it's all a fabricated dependency to keep us addicted to these 2 lobby's ? when ?

about the weapons in the Colombia-Venezuela affair , they are old bazooka-like single-use rocket launchers that Sweden sold to Venezuela in 1983-84, and now some seems to have been found in FARC's hands, so after 25 years the neocon press (the editorials in most newspapers are controlled by the Neocon-Oil Lobby's) demands that Washington DC declares Venezuela a terrorist country ?

Rebels Obtained Arms Sold to Venezuela, Colombia Says ,NYT, July,28,08
http://www.nytimes.com/2009/07/28/world/americas/28Colombia.html?

The US Policy in Latin America has been a disaster for 25 years, we should have a US-Latin America-Brazil Conference with all the countries in the continent to start a new dialog, a new era, but DC is so incompetent and corrupt, they will do only what the Neocon-Oil Lobby wants : to keep all divided and fighting, so no change here, what a criminal shame !

2) The next weeks are vital for Health Care Reform, for National Security and Rule of Law : the Obama-Biden team must make very clear to 140 million US workers and taxpayers , as well as the huge retiree and disabled group, that

a) IF THEY LIKE WHAT THEY GOT WITH MEDICARE OR ANY PRIVATE PLAN, THE WILL BE ABLE TO KEEP IT

b) AND THAT PRESCRIPTION DRUGS WILL COME DOWN IN PRICE FROM THE STRATOSPHERIC LEVELS THEY ARE NOW

c) and that the multi-billion dollar levels of profits of Pharma ,Drugs, Insurance and their top executives , as well as the Drug ads costs and its tax deductions as business expenses , will come down to earth ...

of course, not included in all this are the Federal employees and Congress members who get what they call a "Cadillac" Health Insurance , like P.Obama has the honesty to say : these amazing super deals like the one he got are excluded, the fact is that Congress members get what no one else gets...
the next few weeks of "explaining" is the make or break of the deal.....President Obama also wants to end the 177 billion dollar give-away to Insurance Companies under the Medicare Advantage Plan, which is what the Medicare plan offers already, but will he get the Congress to go along on this ?

d) another little detail is the constant cases of Pharmaceuticals

(hello ! Baxter Pharma , how you all doing ?) releasing tainted vaccines to the public, but hey ! if we don't get sick, they can't sell us the medicines ,right?

http://www.healthreform.gov/
http://edlabor.house.gov/markups/2009/07/hr-3200-americas-affordable-he.sht=
ml

and more about Health IT software security, below at 10)

3) about Rupert Murdoch and the Rule of Law :

a) In the 90's , when the Tobacco Lobby was under attack for the costs of emphysema and cancer by then President Clinton and the Democratic Party members in charge of Congress , the top executive Board members of Philip Morris Tobacco, Rupert Murdoch and Carlos Slim Helu among others , were trying to find ways to stop the Legal Investigations going on (international labs were popping-up with modified special tobacco seeds with huge nicotine concentrations, new addictive toxic substances found in most cigarettes were killing laboratory rats in hours ,etc.) so one "plan" was the one proposed by then a gossip and scandal writer working for Murdoch in his New York City publications called Goldberg, and she had a young daughter called Monica Lewinsky ,and while the West Wing of the White House was run at the time by Rahm Emanuel and his partners, Monica became an intern , put right in the center of the White House and was left alone with the president more and more time every day until she got to the core : the President's "personal" attention , the scandal broke-up and the Murdoch TV and newspapers machine started to make millions out of it, all the way to the Impeachment Proceedings....a huge business ,a wounded president under control of scandal and a Tobacco-Nicotine Legislation distracted .....

And now with the same "special team" inside the White House, we all know that it's a matter of time before P.Obama, VP Biden and their teams gets stuck in another "fabricated scandal" and to keep them against the wall and under their control, that's how they always operate : lies, theft, abuse ,extortion and treason , the usual...but as they say : do it to me once shame on you, do it to me twice, shame on me ..... and that's why is so important also to break the circle of corruption and AUDIT the Federal Reserve, this and a new team at the Fed would give the Obama -Biden team power to keep these criminals at bay...

b) Already the way Murdoch got the USA Congress to make an exception so that he could buy assets from G.M. as a foreign national, how he got satellite technology and TV Networks like Fox while a foreign national and they had to change the Laws just for him , how he got away with the Tobacco nightmare, the Lewinsky fabricated criminal fraud, how he and his papers pushed for the Iraq war (with Senator Schumer and Rep.Emanuel , among others, every week on them pushing the lies about Iraq among others) , how Murdoch's papers and TV covered-up the news about the initial march to Baghdad leaving behind warehouses full of weapons and explosives unguarded, how the Baghdad Museum was looted with military precision (and it wasn't the USA or Iraqi Military), how the contractors were losing billions of dollars in trucks and hundreds of thousands of automatic weapons and rifles in transit , and on and on, without a hitch -- we must remember that without insurgency (and armed and with weapons) there was no justification for multi-billion dollar no-bid contracts ... it's a very simple business formula -- it all shows to the world how Washington D.C. has been hijacked by Murdoch and his goons, the Neocon and Oil Lobby's , and it's a criminal shame and a real terrorist act, but will anyone in DC stand up for the Rule of Law ? no one.

even how he avoided taxes on many of these issues in the late 90's and early 2000's should get the IRS going, right? .....not with his friend Shulman in charge of the IRS , won't happen.

c) Rupert Murdoch is a personal friend of Maurice Greenberg of AIG and Judge Rakoff , and the fact that Greenberg fraud case l was in Judge Rakoff chambers has many people wondering, since they all are friends of way back, was there any talks among jurors and Judge and Greenberg? is there anything that we don't know that they know ? how can such a clear double case go in Greenberg's favor ? will the Justice Dpt. investigate ? will Congress ? will the IRS ? will the A.G.'s ? will anyone care ? no.

and in the SEC case against M.Greenberg, he gets a 15 million dollar fine and walks away with 2 billion dollars in AIG and CV Starr stock, and what's the difference in the "cooking of the books for profit " that he did as CEO and chairman of AIG and the "cooking of the books for profit " that others did ? many got 20 or more years in jail, why some go to jail and others get just a fine ? and even others just walk away with a 300.000 dollar salary.... eh! Rahm , like you at Freddie Mac ?

d) In the 9/11/2001 Investigation, Murdoch's friends Zelikow ,Lehman and Ben-Veniste (all the Robert Rubin apparatus) were in the 9/11 Committee, and no one could believe it, since all are friends and partners of the principals in the WTC case : Silverstein, Goldman, Pacific Investments, etc., etc., and specially when : 1) we think about WTC - 7 , the huge third building and that collapsed on its own footprint without being hit by any thing or anyone, in a perfect symmetric collapse ,and still is a mystery to engineers and architects , 2) and while Silverstein had called 23 Insurance companies just weeks before the attack (the leases were signed just 6 weeks before 9/11) to open dozens and dozens of policies over just about everything in the buildings, and about all these issues the Murdoch Tabloid media kept silence refusing to Investigate any of it, and always siding with the Silverstein-Goldman demands for billions and billions of dollars in Insurance payments : the whole thing smelled like rats on a sewer feast , and they were and are feasting on the dead....will anybody ask ? no .

http://www.nyccan.org/
http://www.ae911truth.org/
http://911dvdproject.com/

e) in the 2008 Financial and Derivatives Disaster, the Murdoch TV and Media machine defended many neocons in Wall Street (in many Military-Security and Intelligence Contractors the key stockholders are his Hedge-Fund / Equity / Investment Partners : the war profiteers)
and that's why he bought the W.S.J., to cut-off some of the most deep investigative reporting in that paper about the Federal Reserve ,the Treasury, AIG, Bear Stearns,Lehman,Merrill and Citi and their links (they all did their trading and investing in partnership) and the ex-vice-chairman of AIG, Frenkel , and the ex-chairman , Greenberg , know a lot about it, but will any one go to the bottom of this ? and will anyone check the massive high-speed trading they were doing among them at all hours? with the inside know-how of some at the Fed? and that the WSJ was reporting before Murdoch took the paper over ? no.

so all in all, Rupert Murdoch may be a sharp operator, but for the community as a whole, he has been and is a total disaster, a nightmare for America and the world, but ....he puts his foot and money down and in D.C. you can hear all the pants and garter belts dropping to the floor, the screams and cries....he knows how to keep the DC darlings on a leash , and they like it , the incompetent traitors.

Right now, and as many in the financial areas are saying, many " Wind and Solar Power Projects " are being delayed or cancel due to financing problems, and its the Neocon Lobby of Murdoch with Sen. Feinstein , Feinberg etal and the Oil Lobby the ones pushing to slow or kill these Energy Independence Projects with " No Finance" , this "problem" and that "little problem", they want to keep the USA stuck on imported oil and gas and depending on the Middle East for back-up sources (Saudi Arabia-Qatar-etc. and one strategic partner,Israel, getting all our money and attention) , and so the National losses are staggering and the National Security implications huge, but will anyone in D.C. stand up for America? no.

Unless a new generation of politicians and Americans gets elected , we will always have this abuse, the war profiteering , the tax evasion, the corruption and the criminal activity while the " old class " politicians bend over for yet another campaign donation and yet another Murdoch "nice story" in his Media.

4) in the N.Y. Times, "Power Shifts in Plan for Capital Calamity" , July,28,2009 ,
http://www.nytimes.com/2009/07/28/us/politics/28continuity.html? , we learn that in case of total disaster, the Chief of Staff in the White House, takes control of the Military Office...why ? a political appointee in control? do the President and the Vice-President see where they put themselves in relation to the Emanuel,Summers, Axelrod,Furman, Orszag,Geithner,Shapiro,Gensler , Genachowsky,

Feinberg group ? a political-military-financial organized group gets to control the Military Office of the White House in case of total disaster? this is totally Un -Constitutional , but will anyone in DC object ? no !

here is an excerpt ".....Power Shifts in Plan for Capital Calamity.....WASHINGTON =97 A shift in authority has given military officials at the White House a bigger operational role in creating a backup government if the nation=92s capital were =93decapitated=94 by a terrorist attack or other calamity, according to current and former officials involved in the decision.
The move, which was made in the closing weeks of the administration of President George W. Bush, came after months of heated internal debate about the balance of power and the role of the military in a time of crisis, participants said. Officials said the Obama administration had left the plan essentially intact.

Under the revamped structure, the White House Military Office, which reports to the office of the White House chief of staff, has assumed a more central role in setting up a temporary =93shadow government=94 in a crisis.

And the office, a 2,300-person outfit best known for flying Air Force One, has taken on added responsibilities as the lead agent in shepherding government leaders to a secure site at Mount Weather in rural Virginia, keeping classified lists of successors and maintaining computer systems, among other operational duties. Many of these types of tasks were previously handled by civilians at other agencies, led by the Federal Emergency Management Agency........"

5) WASHINGTON TIMES, June,23,2009 :
EXCLUSIVE: U.S. attorney nominee won't ID all clients
http://www.washingtontimes.com/news/2009/jun/23/attorney-nominee-wont-id-al=
l-clients/
where we learn that Paul Fishman , nominated by P.Obama to be U.S.Attorney in New Jersey , won't ID 37 clients of him at his law partnership , amazing,eh ?

and what about the 44 indicted corrupt figures in New Jersey? why the National Media is silent on this when at least 5 were involved in a Money laundering ring ? why not install the guy who did that great job , Ralph Marra Jr., acting U.S. attorney for New Jersey , in the permanent job ?

How is it possible that we find out about a very well organized money laundering operation working between the USA, the EU and the Middle East and the media turns silent ? how is it possible that c-span, npr and PBS don't even mention any of it?

and these same spin outlets, when P.Clinton secures freedom to 2 journalists , Ling and Lee, and out of North Korea ,they spin these great news into a negative gossip,a negative event, and hoping to minimize the success they look for arguments and conflict , and when they fail they go back to their warmongering criminal nonsense and lies , and they talk about patriotism? who are the real terrorists ? who are the real criminals and enemies of America ? what a criminal shame the TV and cable Networks have become !

6) Financial Crisis Inquiry Commission ,
http://www.opencongress.org/bill/111-s386/show
http://www.politico.com/news/stories/0709/25001.html
The problem is that the neocons will insert a neocon like Zelikow , Feinberg or Porter Goss to steer the Commission into another absurd 9/11 Commission : a cover-up and a distraction : ADD INSULT TO INJURY...

7) Schools with no playgrounds but with lots of vending machines for junk foods and sugar sodas, and then the parents have to spend money buying medications, and my question to Education Secretary Duncan and which so many parents are asking : When are schools in the USA going to have simple "Solar-Wind and Batteries" demonstrators in every schools so that kids can see how these new vital technologies work and to make them part of their natural growth: the new generations must be the leaders in Solar,Wind, Wave, Batteries and Hybrid-Electric plug-ins , fuel-cells, insulation, synthetic fuels and fusion energies, and the best way to grow a leader is to start early, by watching how these natural sources charge-up their gadgets and toys, their laptops and mobile phones, make it a second nature to them, a natural process ..... why not a simple "demo" in every school?

8) In the Criminal Anthrax issue of 2001 , when medical worker Nguyen was killed by heavy-duty anthrax spores at the Manhattan Eye,Ear and Throat Hospital, http://www.nymeeth.org/ , many knew that Emergent BioSolutions (the old Bio-Port from Lansing Michigan) and their executives, like Kramer, had a lot of answers, and then ...silent ! all the key Congress members went silent, no one asked about Bio-Port, and then they presented the usual gentiles as suspects: Dr. Hatfill and Ivins, and the rest is History....until today, how could these anthrax spores get to the Manhattan Hospital ?

9) In the Internet video standards issue , Flash is "no good" for Mac or Linux, that's why we need HTML 5 right now ! we need code, tools, applications , solutions.
http://arstechnica.com/open-source/news/2009/07/decoding-the-html-5-video-c=
odec-debate.ars
http://en.wikipedia.org/wiki/List_of_open_source_software_packages
http://www.w3.org/

at the other hand, this story should bring some joy to many:
"Google Chrome gets skins and JavaScript performance boost.
Google has released a new Chrome beta that includes a theming engine, faster JavaScript performance, several usability improvements, and support for HTML5 video. "
http://arstechnica.com/open-source/news/2009/08/googles-chrome-gets-skins-a=
nd-javascript-performance-boost.ars

10) And dear Director Panetta,the key problem in the Health Care Reform INFORMATION TECHNOLOGY CHOICE OF SOFTWARE is WHO is in charge of the medical private data ? , and do they have their own agenda ? who is watching them ? as usual, most of Washington D.C. is clueless, so who will ?

The White House announced that David Blumenthal, MD, was going to be the new national coordinator for health information technology at HHS, and he is in favor of proprietary software while the other Harvard University group that presented the better option was in favor of open-source, and Blumenthal's partners Genachowsky at the FCC, Leibowitz at the FTC , and Summers , Emanuel ,Orszag and Axelrod among others in the White House are insisting on using proprietary Flash technology from Adobe AND OTHER PROPRIETARY SOFTWARE, instead of the free and open-source HTML 5 that the web is based on, why ? at Flash ,where some of the top executives are, what a coincidence! , friends and partners of the above, they are very happy that they will be part of the "control" of all the data of all the citizens in America, isn't wonderful? and of course they will use Oracle from Ellison as database, right ? and if anyone objects, the SEC ,under supreme general chairman Shapiro -- the SEC ex-Commissioner that was in charge while AIG ,Bear Stearns ,Merrill and Lehman were selling hundreds of billions of dollars of Credit-Default-Swaps and she never saw anything !!! -- will immediately correct EVERYONE , if you know what i mean.....it's a perfect plan , wonderful, eh ? and the gentiles in DC ? many of them looking for a belt to hold their pants and garter belts , poor darlings !

So if you put all the dots together, the same organized people that gave us the 2008 Financial Disaster, will now control not only all the private data from all the patients in the USA , they will control also the software that runs the whole national system,amazing ,eh ? and later, when the "dungaroo" hits the fan, they will blame the Democrats and the Obama-Biden Administration, perfect ,eh?

In mi opinion, the sooner the Obama -Biden ticket gets all these neocons out of the White House and their Administration, the better, just look at the "dungaroo" they did Sunday, Aug,2,2009, when Geithner and Summers had the nerve to say on the TV "spin and lie" programs that higher taxes for workers and middle class are not out of the question , so dear P.Obama : when are you going to get all these neocons out ? when are you going to put an honest gentile in the Federal Reserve and audit that "cave" ? when are you going to get Flash out and low-cost HTML 5 video in ? when are we going to get going ?

http://www.ama-assn.org/amednews/site/mobile/content/ga0803.htm

Health Care Reform is vital, let's make sure the neocons don't control our data and software , because their Health Care Financial Abuse and

Disaster could make the 2008 Financial Meltdown look like a little joke, they could wreck the whole country, the greedy fools ! , let's get it right this time !

And if you want to see what some people can do with our private data, just read this :
New U.S.-Israeli Crime Ring Detailed
http://www.nytimes.com/2009/08/04/world/middleeast/04israel.html?

11) And the "Standards" issue is an old one :Until 1995, the Defense Dpt. and all its units were using a mix of wireless radios, and then Qualcomm and Jacobs went to "advice" the Military in San Diego ,Ca. , and a few years later, many of the key CDMA and wireless radios used by the U.S. military and U.S. private consumers were paying huge royalties to Qualcomm and Jacobs, they showed up with all the patents, and even when these people got some good technologies, where are the Military and consumers radios that everybody was using as open-source and free of charge in the U.S.A. ? where are they ? .... many consumers and some politicians asked the San Diego based U.S. Attorney Carol Lam about this , but then she got fired and later became the top Lawyer in Qualcomm !!! what happened ? how is that possible ? and about the wireless radios and patents investigations ? nothing.

http://en.wikipedia.org/wiki/Carol_Lam
http://www.signonsandiego.com/news/metro/20070112-9999-1n12lam.html

Right now, America needs a massive push in advanced batteries and hybrid-electric plug-in systems as well as solar and wind energy, we are number 5 and 3 in the world in these key technologies, and that's a total disaster, and how can we spend 2 trillion dollars in the Banks and Financial Institutions (700 billion from TARP plus at least 1.3 trillion dollars between Treasury, Fed, FDIC and others) and then invest only 60 billion for all alternative energies and technologies ? and just a few billions for batteries ? we gave 180 billion dollars to A.I.G., the main promoter of this 2008 Credit-Default-Swaps Disaster, and for our own future and Energy Independence just a third of that ?

That's why also vital to Audit the Federal Reserve ,
http://www.ronpaul.com/on-the-issues/audit-the-federal-reserve-hr-1207/
and investigate the Organic Program Federal Law, where Senator Leahy has worked so hard all these years,
http://www.washingtonpost.com/wp-dyn/content/article/2009/08/07/AR200908070=
3650.html
http://leahy.senate.gov/NwsLtr/20090327news_letter.html
http://www.nal.usda.gov/afsic/pubs/ofp/ofp.shtml

.....and now for the latest part of the Big Trick , "they" are about to install new "old operators" in A.I.G .,Freddie Mac and Fannie Mae, etc., and split , cut , divide and fire-sell their assets and of course, Goldman Sachs, BlackRock,Pacific Investments,etal, will be the key players, so after taxpayers INVESTED hundreds of billions of dollars bailing out these tricks, the same old operators get to make the cut AGAIN ! , and a big one ! isn't wonderful ? a triple whammy ! and Washington D.C. still looking for a belt to hold their pants...and that's also why their stock is going up and up every day, they can smell the roses already ...while the taxpayers will smell the ! $#&*XZ@#*! again.

in any case http://www.ilfc.com/ must stay in USA and EU gentile hands, it cannot end up in the Middle East with our own oil-gas money !!!

At least we also got Senator Webb that worked so hard for the Post 9/11 G.I. Bill, effective August 1,2009 ... that's leadership, that's the real deal.
http://www.gibill.va.gov/
http://en.wikipedia.org/wiki/G.I._Bill

So dear Director Panetta, you are right to want to move your great Agency forward, a very difficult job indeed, but we need a total clean-up, and who will make sure that the old garbage is out ?

It's a Tokyo Hy-Power HL-45B amp, designed to be driven with a Yaesu
FT-817. I'm using a "20 Watt" Argonaut V, which isn't terribly linear
at 5 Watts (closer to 3 is actually what's required by the THP).

A bunch of chip resistors in parallel to ultimately make a T-atten.

Yebbut....
12W is a fair bit to dissipate with chip resistors (even a lot of them).
However, the question was if you could use WW resistors, not 'how to do
it properly'. I presume there was a reason why this was asked! After
all, we ARE talking 'amateur' radio.

A 5db T attenuator with 15 W in has the maximum dissipation in the shunt
resistor at about 5 W.

The input series resistor dissipates about 4 W and the output series
resistor dissipates a little over 1 W.

I see no reason to go to wirewound resistors at these power levels.

Oh, I quite agree. I wouldn't really choose to use WW myself, but I
think they would work in this application. It's just that I usually try
first to answer the question as asked, and, if necessary, start
embellishing things from then on!

In general I agree with that, but if I ask a question based on a shaky
or incorrect premise, i.e. "special" resistors would be required for
a 15 W attenuator, I'd prefer to be told my premise was foobar rather
than waste my time chasing after something less than desirable.

> Ian

He obviously has a source of WW on hand. I hate to place an order
when I find stuff in the junk box.

So now the question is:
Will it be a significant problem? If he really knew what the inductance
values were, then it would be a simple matter to make sure it is
insignificant or at least minimal compared to the resistive component.
If the resultant SWR is low enough, the 5 dB return loss will help.
After that, the question would be "How will the amp act with
whatever input load is there?

Some resistors have a few laser cut turns that reverse themselves to
cancel the inductance. Some are a Carbon pack. A true WW
is either made by several turns of resistance wire over carbon or
ceramic for larger power ratings. Those have way too many turns.
It was mentioned that these even have a significant inductance at
audio frequencies. Now I ask you, is 5k inductive reactance
significant on a 50 ohm resistor?

You can always build one and see, if the exciter SWR is under
2:1, the amp input would see that too and you might be OK!

The other part of this is: How much power gain is the amp if
you need to kill 5 dB. Another thought is to incorporate
the inductance of the resistors to design a bandpass filter.
With many solid state exciters, some of the spurious outputs
don't reduce when you turn down the power.

http://www.repeater-builder.com/tech-info/allied-data-handbook-4th.pdf
All might find it helpful.
A more legible html version:
http://mikeyancey.com/files/Other%20Manuals/Allied%20Data%20Handbook/
htm%20version/title.html

All food for thought.

The whole point of wirewound is that I can make a T pad with 3 5 Watt
resistors.

They make "flange" attenuators but they cost a fortune in small quantities.

Just about anything you can get other than wire wound.

Mouser has metal oxide 5 W resistors for $0.49 quantity 1.

You don't really want to run them at full rating but you will likely
have to parallel two to get the values you need anyway unless you have
a cheap source of better than 5 W precision resistors.

You need two 14.01 Ohm resistors and one 82.24 Ohm resistor to build
the attenuator.

If you parallel two 27 Ohm for 13.5 Ohm, and two 150 ohm for 75 Ohm, you
wind up with an attenuation of 4.95 db and a VSWR of 1.04 for a 50 Ohm
system.

Not really necessary for HF ops.

The only advantage to using individual resistors, is to reduce the stray
reactance. That goes way out the window with WW. Inexpensive solutions
often revolve around buying surplus 1/2 watt or larger axial Carbons and
arrange them in parallel to achieve the required values. This also helps to
disperse the heat generated. The parallel resistors are soldered close to
the body to Brass or Copper stock to improve dissipation. Also consider
that although tune up will require 100% duty cycle, CW is 50% duty cycle and
SSB is less.   Check the Math in the Allied or ARRL book.

>Fuck you.

Dave, that's a very strange response. Do you have a problem with me suggesting that you probably had a reason for asking if WW resistors could be used? I've already said that you will probably 'get away with it' up to 14MHz, especially if you mount the resistors as close as possible to a ground plane.

You may not realise that lot of 'engineering' is the art of 'getting away with it' (for whatever reason). For example, the reason might be economics, it might be practicality, it might be urgency, or it might be availability. The list is endless.

I'm just putting myself in the situation where someone needs to lose 5dB of RF drive, and (say) all he has immediately at hand is a selection of WW resistors. Does he try them (knowing that they are not recommended for RF work)? Or does he take advice from the experts who, without a second thought, will probably say "No way!".

The point is, do you want to try the WW resistors, knowing full well that they are not really the right thing to use, but will probably work well enough for what you want? Or do you want to do things 'correctly', knowing that what you have done will be almost perfect? You have received various bits of advice (some conflicting). It's now for you to decide what suits you best in the circumstances.
--
Ian

I know how to think. I have no resistors, period, except for the 1/4
Watt ones I use at work. Mr. Jim has pointed me in the right direction.

All "amateur" means in the context of Amateur Radio is that we do not
get paid for doing our thing. It doesn't imply that we are stupid or
incompetent.

I am fully cognizant of the possibility of meaningful reactance being
introduced by a coil of Nichrome, and was hoping that someone who deals
with passive components more regularly than I could point me in the
right direction, and that has happened.

I got 10 of each, so I'll have some in the "miscellaneous" tackle box
next time. Thanks.

> Thank-you. That's probably how I'll do it.

Pretty good choice. I hate to buy from mail order suppliers because they
often have a minimum order or minimum handling charge. I prefer to use what
I can, especially for evaluation of a circuit.

The formula for resistors in parallel is R = reciprocal of :
sum of reciprocals of the selected resistors.

So: R= reciprocal of 1/330+1/330+1/330+1/33=
reciprocal of 4/330= 330/4 = 82.5 ohm

for 4 ea 330 ohm 1 watt resistors for an 82.5 ohm 4 watt resistor

Or for equal value resistors: The individual resistor values divided by
the number of resistors

56/4 = 14 so a 14 ohm resistor can be made with 4 ea 56 ohm resistors.

Now lets check the work:
If the exciter is 20 watts and will see 50.04 ohms.
The 50 of the amp input + 14 ohms is 64 ohms.
If we parallel that with the 82.5 ohm...
For 2 resistors in parallel R=(r1 x r2)/ (r1+ r2) = 36.04 ohm plus the 14 ohm in series =50.04 ohm to the input of the network.

So the above values are correct for a T pad.

Go to Ohms and Kirchoff's laws to see the current, voltage and power dissipation of the components:
P=I squared R there is 632.5 ma through the 1st 14 ohm resistor for 5.6 watts,

E=IR= 8.855 volts drop for the first 14 ohm resistor.

The voltage for 20 watts at 50 ohms is SqRt of PR so
31.62 volts. The rest of the network after the 14 ohm resistor is 22.77v.
The 82.5 watt resistor will see 6.283 watts of dissipation.

Now current through the 14 ohm output resistor and 50 ohm input of the amp will be .3558amp

By now you should have a copy of ohms law around.

1.77 watts is dissipated through the second 14 ohm resistor and 6.33 to the amp.   You will notice all the dissipation of the amp and resistors adds up to 20 watts.

The identical resistors in parallel will divide the power dissipation equally.

Thanks for the exercise! I leave it to the rest to critique and cross check my math.

From your other post, I see that you are going to use metal oxide resistors. In the circumstances, that's obviously the correct decision.

But your question did not ask about what were the best resistors to use for the attenuator. It was "Can I use wirewound resistors to build an HF attenuator?" I assumed that you knew that WW would be inductive, but might have some reason for wanting to use them.

Ralph Mowery replied that the "Simple answer is no" etc. You responded with "Can the inductive reactance be cancelled with capacitors? I'm mainly concerned with 40, 30 and 20 meters" which again made me think that you wanted to use the WW, if possible. I suggested that the effects of the inductance might be reduced if you mounted the resistors hard down against a ground plane. [This is a frequently-used technique for preserving the characteristic impedance, especially at higher frequencies.]

JB then suggested "a bunch of chip resistors". I commented that you would need quite a lot of them. It was only then that I actually suggested that there might be a reason why you were asking about WW, and that the application was 'only' for amateur radio. Your response was "Fuck you". "How very strange", I thought!

Anyway, I'm glad you have got yourself sorted out. I hope - no, I know - that the attenuator will definitely work as expected, with the advantage

that it will probably work way up into the VHF region.

That's way revisionist, but I am used to it. I apologize for the
vulgarity.

If you go to RFcafe.com they have lots of on line calculators. I keep a
scientific calculator on my desk, but the web is much faster. I have
shortcuts to cable attenuation calculators, Ohm's Law calculators, LED
resistor calculators, etc. I have a wall chart of dBm vs Volts at 50 Ohms.

The above formula also works for capacitors in series. I knew that in
my head.

It would seem to be something is broken If you pull the antenna off, it would have to be pretty local. There shouldn't be a problem like that via the antenna anyway. I would be more inclined to wonder if a switching power supply had a spurious landing there, but it could also be a noisy IF amp. in the Main band.

Yaesu released a new mobile VHF/UHF radio at the Tokyo Ham Fair last weekend, the FTM-350.
The FTM-350 is a 2m/70cm rig, capable of putting out 50W max. GPS and APRS are included in the box.

More info and images can be found on
http://rigreference.com/rigs/view/4522/Yaesu-FTM_350

You could build the attenuator so it takes the power down in steps
perhaps 2 1db attenuators followed by a 3db attenuator. I didnt run
then numbers but I think this is doable with 2 watt resistors.

Jimmie

Thanks. I have some honkin' metal oxide resistors that I'm going to use.

Thanks, Jim.  The thing works like a champ.  I added a couple of $2.00
relays to bypass the pad when receiving.

I would recommend one of the Motorola mobile external speakers from the
90's such as a Spectra or Syntor speaker.

Looks like a IC 7600 with non color screen and VHF added above 6 meters.
Maybe a IC-746Pro replacement.

probably not in the USA until 2010. Plus maybe another model #.

I have a few, including the Mastr2 mobile speaker and Motrac/Mocom 70 metal
speakers that are very efficient for use on portables.  There are subtle
differences in the response curve due to different speaker and housing
design Kenwood also makes a smaller mobile speaker that seems to peak at the
higher end of the voice spectrum.  A little shrill for me.  You really need
to try different speakers to see what works best for your ear and
```

environment. I am currently using an RCA home theater speaker for an external speaker in another room but another works best in the shack. It is no use to have frequency response below 200 Hz or above 3kHz for best voice reception. PL tones or excessive bass at the low end will interfere with intelligibility at the low end, and at the high end you battle with noise. The actual spectrum that is required for most reliable discernment of what is being said is between 400-2400 Hz.

There are several hearing test web sites that ask stupid questions, but there is one that actually uses test sounds with noise at various levels. If you have a calibrated variable attenuator on your stereo, you can actually plot your hearing performance in each ear. One of these days I hope to stumble on to it again.

I ended up getting a "CLRspkr" speaker with built-in DSP noise reduction. It costs about $215, and
it is sold by West Mountain Radio. Here is a link: http://www.westmountainradio.com/CLRspkr.htm

The DSP in the speaker is significantly better than the DSP in the Yaesu FT-897. I would rate it as
the best accessory I've added to my ham rig.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

```
 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

Would anyone have any documentation on this Digital Display Unit?

Can you tell me what Radio(s) it is for?

The Power connector isn't marked. Can anyone tell me what power it
takes and how the polarity lines up with the Two Socket Plug. (There is
a key between the two sockets.

Much like

O u O

Any Help or Documentation would be GREATLY APPRECIATED!!!!

S.

I have this question posted in the boatanchors newsgroup, but the Grand GD-6K Frequency Display could be used for a Radio that doesn't fall into that description.

So Her is my basic problem. I need to know what radios the Frequency Counter/Display was used for. I have done an exhaustive search on the internet with very little luck...   I saw one reference to it hooking up to a TS-820, and others have told me that it worked on a TS-520.

There are three RCA connectors on the back marked H C V.

It was suggested by Bill in the boatanchors newsgroup that this may be for Heterodyne Oscillator, Carrier Oscillator and VFO.

There is a two wire hookup for the power with a connector that has two round sockets separated by an inverted U on the bottom. I took the unit apart and found a 25V 470uf Capacitor and no rectification components so it must be a DC input. the 25 VDC Suggest that it is a 12VDC hookup. The left socket was tied to the chassis so the right socket could only be for the + VDC. I sew a 5VDC Regulator in there but I suspect that it is a dual voltage setup. I saw an add for another Grand Model that took 12 VDC as their input but it was not the same model. I connected 9 VDC up to it and got lights.

The only input that seem to take a signal and show a display on the meter was the H input. I started low and raised the function generator up slowly until I got a Frequency display. It seems to take a sine wave or a square wave (i even tried a sawtooth wave and it worked okay). The frequency that it displayed was >0 to 31 MHZ at a 1.5 to 3 Volt Level. I didn't take definitive measurements so it could take a lower voltage. I was just going under the assumption that in TTL that a logical one was about 2 to 5 Volts..

Now the questions. What are the H, C, and V connectors for and how do you connect them to the radios. TS-520/820 or other radios. The C input seems to take a standard frequency and display it, what would be the point of the H and V inputs.

I found this message on forums.QRZ.com and it read, it said:
____

I have a Kenwood TS-820 with a Grand GD-6K aftermarket digital readout. One of the wires came loose from the plug in to the eight pin remote socket. It is the wire marked "C" on the back of the unit. Can anyone helpme figure out where that wire goes? I got the rtadio used some years

ago, and there are no instructions.
Thanks

KK7US, Lee

Since the H connector was the only one that gave me a readout on the frequency display, what could the "C" connector do that would stop it from operating...

Any Idea's would be greatly appreciated...

S.

Hi,

I do have no knowledge of the GD-6K at all. However, I could spend some time to write my thougts in the ww usenet.

Using a frequency counter as readout for any transceiver mostly requires the addition or subtraction of the IF to show the actual receive or transmit frequency. Could it be possible that one of the other inputs is used to separately feed the IF signal to the frequency counter ? Could it also be possible that the Kenwood radio's do use 2 different IF's for transmit or receive ?

If I'm complety talking non-sense then please ignore my message ;-)

Kind regards,
Ben - PE2BZ

No, actually you hit it pretty much on the head. I talked to another ham that told me that he used a GD-6K on a TS-520S and that it hooked right up to the 3 connectors, plus the power connector. It seems the Grand Systems GD-6K was a reply to the Kenwood DG-5 external display. (I won't say rippoff.. LOL) ..

Now I found an online manual of the DG-5 and it read, it said:

The TS-520S operating frequency is made up as:

of = HET-(VFO+CAR)

In the The DG-5 where two counter circuits are connected in series, the heterodyne signal is fed to the lower counter. This lower counter subtracts 10MHZ from the heterodyne frequency in a digital way (HET-10MHz). The subtracted frequency presets the upper counter. The other signal fed to the upper counter is composed in the manner that the carrier frequency is mixed with the 10MHZ reference frequency and the resultant is further mixed with the VFO frequency. [(10MHz-CAR) - VFO]. The signal is added to the one preset by the lower counter, that is:

[(10MHz-CAR) - VFO] + (HET - 10 MHz) = HET - (VFO + CAR)

As explained above you will find that the DG-5 should display the correct TS-520S Operating frequency. The reason of using such a complicated construction is that if the GD-6K is the same as the TS-520S in the construction, this can produce a signal of the same frequency as the receive frequency. The signal interferes as spurious with the operation of the TS-520S.

(1) HET Connector (H) - The HET connector is used to input the heterodyne local signal of the TS-520S. To connect to it, use the supplied signal cable.

(2) CAR Connector (C) - The CAR connector is used to input the carrier signal of the TS-520S. To connect to it, use the supplied signal cable.

(3) VFO Connector (V) - The VFO connector is used to input the VFO signal of the TS-520S To connect to it, use the supplied signal cable.

(4) Digital Frequency Display - Six digit 7-segment light-emitting diodes (LEDs) illuminate input frequencies in digital way. The leftmost two digits are in units of MHZ, the succeeding three digits of kHz, and the right most digit of 100Hz. These are section by two points.

(5) Power Connector. 13.8V, 0.9A DC Power Connector - This connector supplies the TS-520S 13.8V, 0.9A DC Power into the GD-6K. For connection, use the attached power cord. It may also be connected to other power supplies of the same rating, for example, the KENWOOD Models PS-6 and PS-8.

Now all of these connectors connect to the Grand Design via three RCA jacks, and a keyed power cable.

My only real question at this point is in reference to this Post I found on the internet:

I found this message on forums.QRZ.com and it read, it said:

Thanks

KK7US, Lee

So how did this guy get the unit hooked up to a TS-820, there are no connectors on the back of the unit???

Well, any Idea's would be welcomed!!!

Thanks!

Hello all,

I looking for a goodlooking and working DVS-2 voiceunit for my FT1000D .
If you want to sell your DVS-2,let me know your price with shipping to the Netherlands.I am paypall-member or for EU:IBAN is no problem.

URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

How much of the Kit is assembled? I see it's just about all surface
mount, and it�s a modular kit.
For $200 more you can get a tested and assembled K3. There is very

little info for the K3 on their web site.
Looks to me its not much of a kit.

Cheers

I think you're missing the point, you know, about the receiver.

This is a dual band VHF / UHF mobile radio.
I can't find any service manuals for this radio anywhere online. .
Can somebody please pinpoint where the VCO adjustment is on the UHF side.

Symptom:
towards the upper part of the UHF band it transmits full power then drops.
On the lower part of the UHF band it transmits fine and does not drop.

THANKS,  73,  Mark

I traded another ham in the area my Yaesu FT-857D for a 9-month-old
Yaesu FT-450 with the built-in autotuner. I like it very well, except
that I have not been able to get the FT-450 to talk with my PC using
either a serial cable straight to the PC or a known-good Radio Shack
USB-Serial converter. Programs I've tested with are the current versions
of MixW and HRD. Both still work with the Yaesu FT-897D I still have,
but not with the FT-450.

Has anyone else here had problems with CAT to/from a Yaesu FT-450? Has
anyone here got CAT working to/from a Yaesu FT-450?

My radio club has a working FT-450 CAT interface. I seem to remember
that we had to try the various options for Yaesu in HRD before finding
success. We use a straight through serial interface. There is also a
CAT program on the Yaesu website for the FT-450. We used it first to
verify the cable wiring before switching to HRD. I am not at the club
station, so can't tell you which Yaesu radio model made HRD work. If
you still have a problem, repost your response and I will have a club
member that lives closer, boot up the computer and print the settings.
Another club member has a personal FT-450 that is also working. This
model Yeasu definately is supported by HRD.

Hi, Mike:
The most important factor is that you choose the correct cable to connect your FT450 to you computer. I have spoken to a number of hams and have witnessed on other sites comments that they have difficulty in connecting the radio to their computer. If you get the right DB9 to USB cable or DB9 to whatever your computer is looking for serial cable you should be in good shape. Just looking around, I see that most folks are using a DB9 to USB cable. I chose one that came with a small CD disk to drive the cable. In my mind, normally I would not need a disk

to drive a cable - but what the little app did was match up the data
from the correct pins. I saw some cables in the store that did not
have all the pins in their DB9 connector. That might be OK in some
applications, but I didn't know what the FT450 or HRD was exactly
looking for - so I wanted all pins to be able to be activated.

Bottom line, my cable worked. I purchased my cable from a Fry's
Electronics store in Concord, CA. There were 6-7 or more DB9 to USB
cables that I could choose from (that was kind of amazing in and of
itself). I fritz around for awhile, looking at the specifications on
the packaging and chose one. The one I picked was not, incidentally,
the most expensive one.

Inspect your cable and make sure that you are getting voltage out of
the radio.

73,
Jim Siemons AF6PU

The USB-to-Serial adapter is known good: it works with the FT-897D. But with the FT-450, I have to use a longer serial cable, which I suspect. So, oddly enough, that was going to be tonight's project: ohm the cable out, then put the cable on the computer's serial port, put the scope probe in the other end, and look for state changes as I change things in HRD and MixW, and finally put the cable on the radio and look for state changes on the computer's end of the cable as I tune.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

I have an MFJ 989D that I picked up used. I changed out the flimsy rotary Inductor with a well insulated ceramic insulated one from an old military tuning unit measuring 31 uh. It works great.It was physicially the same size and only took an L bracket made from Aluminum and the gears line up perfactly for the turns counter. What I see now and BEFORE the inductor change is above 20 meters, i.e. 15 and 10 meters, while applying 30 watts to tune the antenna, the power and swr meter pulsates, and then shuts down. I put another swr bridge into the input of the 989D and it acts normal and I can use it to tune the antenna with out the pulsating.

Anyone ever seen this problem? The 989D works great as far a tuning
but the SWR indicator circuit seems to have some kind of problem above
20 meters.

Any help would be appreciated..

thanks, John aka W3ZDF

Hi all,

I was wondering if anyone knew of a solid state 2m linear amp project
that I could build. I'm looking for no more than about 30W. It'll be
primarily used for FM, driven from my handheld radio. Bonus points if
it can do 70cm too (or at least allow pass-through unattenuated...).

Most of the designs I've seen are for tubes with an output power in
the KW-range... my radio license only allows me to transmit 30W FM or
100W SSB... so these are massive overkill (and not desirable for other
reasons).

The only project I've seen that fits the bill so far is
http://www.falara.org/tektalk/GPOAmp.html which calls for a PCB made
with G10 stock. I have no idea where to obtain that here in Brisbane,
I have some blank PCB, but have no idea what grade it is, or how much
impact on performance using it would have. The MRF1946A is also
difficult to source.

Does anyone know of a good project to start on this sort of thing?

Regards,
Stuart Longland (VK4MSL)

Just realised I was in the wrong newsgroup... I shall re-post.

More relevant to this thread though, alternatively, does anyone know
of any commercially-made linear amps that fit this requirement, and
where they can be obtained? (I suspect they'd be more expensive than
a 30W FM rig though.)

Regards,
Stuart Longland VK4MSL

It's a no-solder kit. Take a look at the assembly manual:

http://www.elecraft.com/manual/K3_Assembly_Manual_Rev_H_WEB.pdf

I saw an Elecraft model KX1 at a friend's house yesterday and fell for it. It is
cute as a bug.
However, I only work phone.

Does Elecraft or any other company make any equivalent (high quality, backpack
size) transceiver for
phone rather than CW? Either kit form or prebuilt will be fine.

Thanks.  That's a nice looking rig!  Does it have any sort of built-in antenna
tuner like the
Elecraft?  For outdoor hiking/emergency use, it would be nice if it could drive a
random length
antenna.

No, but a friend has and _loves_ his FT-817ND. A tuner could be made
very small; Dan's used to sell a QRP tuner kit that would work nicely.

I have the same unit but it does not do this.

However, what I think I'm reading is that the meter or the bi-directional
coupler is having problems and that the matching network is fine?

If the matching network is the issue, I've had the fingers that feed the
plates of the variable caps get dirty. If the silver plating burns
through, you will have to replace the variable caps as a greater failure
is emanate.

I just found an LDG tuner designed specifically for the FT-817: it is the LDG
Z-817. It's about
the same size as the FT-817 and runs off 4 AA batteries.

These are fairly small and very light. You could build one for half
this price, and probably make it smaller.

You don't need linear operation for FM. This should increase the
number of choices you have.

No doubt there are 1000+ opinions on this, but what are some really clear external
speakers for use
with SSB phone signals through my Yaesu FT-897?  I'm 61 years old with high
frequency hearing
impairment due to 40 years of sitting by computers, and I need all the help I can
get in
understanding voice over static.

I have seen several enthusiastic recommendations for the Peavey Impulse II mini
monitor which is
fairly small and costs about $100.  Does anyone have any experience with it?

Icom and Yaesu both make multi-hundred dollar external speakers that have gotten
mixed reviews.

I have been using a SP-230. A Kenwood TS-830 matching station speaker. Has built in filters and radio 1/2 switch. The same circuit has been re-used for various different Kenwoods under different names and cabinets. The cabinets make all the difference and it would be really worth while for you to sit down at different speakers and radios to compare them with your particular ear. It's not uncommon for people to try several before finding something comfortable.

The speaker you mentioned will handle up to 200 W peak. That's about 2 orders of magnitude above what most transceivers put out. I'd be surprised if you could hear much of anything through it without a good external audio amplifier. Most speakers like that sacrifice efficiency to get wide frequency response - they respond way beyond the frequency content of ham radio signals, even those of the hi fi AMers. (Think broadband noise.)

There's an amplifier/speaker combination advertized in QST (I think) that
you may find meets your needs. I don't recall the name of the product or
company, but I'll try to locate it if someone else doesn't chime in.

73,
Bob AD3K

I think Gap makes a pretty good noise-cancelling speaker; I don't have
one, but have seen and heard it in action.

Have you thought of active noise cancelling headphones/headset?

There is no speaker that wil be able to come close, and the difference is
night and day.

Heil makes them. Perhaps others do as well. I have some expensive aviation
ANC headsets and Heil's compares favorably given the proce.

With aging ears, the frequency response above 8 kHz is not considered by the medical trade. If you have a recognized HF imparement then what are we talking about? Above 1 or 2kHz? This is not so uncommon. There are several tricks you can use, your ears may be impared, but not your brain. For example, use one or more of the following:

1 - Use stereo HiFi headphones - also good for blocking out external noise and increasing concentration. Communications headphones have a restricted response, which is NOT what you want.

2 - Use your HiFi system graphic equalizer - works wonders with aging ears. Can make any speaker/headphone more suited to just your ears. People are throwing these things away at the moment.

3 - Although designed for CW use, a hi-pass filter feeding the left-hand channel and low-pass filter feeding the right-hand channel of stereo headphones/speakers also work wonders. It spreads the AF spectrum out as a frequency image across the viewing area in front of you. Each CW station can be heard in a different physical location. Cost is about $2 for the components.

Using this technique SSB can become more understandable, since CW and other interference is often positioned at very specific points in the stereo image and can be more easily ignored, just like advertising plackards on the motorway, or commercial breaks on the telly.

If you proof as to your brains ability to filter, then just try listing all the adverts you saw on the TV last night, or saw on the motorway. You

probably saw 60+ on the TV, or 200+ if you went on a "shopping trip"
downtown, but if you can remember four of them then you are doing well.

Why do people think big speakers need more power.
PA speakers are very efficient. It has NOTHING to do
with power in, and ALL to do with SPL with 1 watt in or sensitivity.

For a person with bad hearing, a horn type of the Peavey might improve
the sound. Probably will also do more damage. You NEVER want to use
a PA speaker for nearfield listening normally. You need
to be at least 10 feet back from the horn.

I would recommend using a nearfield monitor with a adjustable
response filtering to make the best listenable sound for bad ears.
You can also use headphones.

The Larsen glass-mount antenna has a hinge at the external mount point, and
can also be unscrewed.
```

I have the 440 (only) version.

I use this program to calculate the dip switch settings for memory buttons A and B on my Drake RV75 remote VFO. It uses the same correct calculation steps as described in the Drake RV75manual to arrive at the proper dip switch settings. It will run on Linux or Unix with a bash shell.

Michael/KS4HY

For example to calculate 28.340 MHz enter in the following...

```
mrawls@amanda:~ > ./calculate-drake-rv75-memory-code 28340

==========================================
DESIRED FREQUENCY:      28340
BASE FREQUENCY:         28000
28000 - 200 = 27800
```

```
28340 - 27800 = 540
540 * 100 = 54000
54000 + 20000 = 74000
------------------------------------------
RV75 Memory Code = 74000
==========================================

mrawls@amanda:~ >
----------------------------------------------------------------------------------
--
```

Begin bash shell script for "calculate-drake-rv75-memory-code"

```
# =========================
#!/bin/bash
# Calc Drake RV-75 memory codes - MRawls

if [ -z $1 ]
then
        echo "$0 frequency-in-MHz (example - 27405.1 MHz) "
        exit
fi

FREQUENCY=`echo $1 | awk -F"." '{print$1}'`

for X in `seq 0 500 30000`
do

Hi,

Yeah... that looks like a promising kit... not sure if I can get anything like that locally (Australia; I don't possess a credit card or direct debit facilities) so that may be a limitation there... I've been pointed to a couple of kits in the homebrewing section that are based on a Mitsubishi power amp module. I found one based on this module that I can get locally, it was rather minimalist however.

This does give me some other possibilities to chase up however. I am aware that I need not use a linear amp for FM/CW/PSK too by the way... but since future use may include AM and SSB, I figure chasing this sort of amplifier would give me greater flexibility. The aim is to have a suitable power amp that can work with homebrew equipment.

Regards,
Stuart Longland (VK4MSL)

Why don't you send them an email. They are a small company and will
probably give you excellent service.

I have a problem with my rig. There is too much noise main VFO, noise
that looks like somebody is transmitting with bad amp, S-meter jumps
sometimes to +40 dB. The worst is on 70cm, but it is present on all
bands. When I switch to sec. VFO, everything is fine. In the same time,
on the same freq. Main VFO is showing noise.

Any ideas?

Boris

Sounds like a transmitter near one of the IF frequencies.

The main and sub have different IF/AF sections.
The Main is multiple conversion with 10.695 MHz. and 455 IFs and multimode demod that is common to all bands.
The VHF/UHF Sub has a 58 MHz IF that goes straight into its own FM/AM demod.
It is interesting that they used completely different designs for these packages allowing for advantages and disadvantages of both.

BTW there is a glaring error on page 229 of the original Service Manual.

Simple answer is no.

While you can build one with wirewound resistors , the normal formulars will not usually work at RF and you will have a lot of inductance to deal with. Even the socalled non-inductive resistors are only so at the audio frequencies.

Can the inductive reactance be cancelled with capacitors? I'm mainly
concerned with 40, 30 and 20 meters.

The reactance will change with frequency. Do you want to be fiddling with
antenna tuners? There is a whole lot of stuff you need to know when
designing and building. A good place to start is with an ARRL Handbook.
They can often be found in public libraries, but they are an excellent
reference on the subjects you are dealing with. I own several because even
the older information is useful.

If your highest frequency is only 14MHz, and you're not trying to obtain a sooper-dooper perfect match for your exciter, then I'd say that you would certainly get away with using wirewound resistors.

To minimise the effects of the inductance, you could try mounting the resistors 'hard down' against a ground plane. You might need a sheet of some insulating material to avoid any danger of shorting to it.

And presumably, to get rid of 5dB (nearly 3/4 of your original 15W) you intend to use paralleled-up resistors. This in itself will help minimise the inductance.

It becomes too frequency dependant to bother with.

Use a T attenuator.

See:

http://chemandy.com/calculators/t-attenuator-calculator.htm

You will likely have to use series or parallel combinations of resistors
to get the values required anyway.

You can also play with using two attnuator sectoions to see if it makes
the resistor values (and wattage required) simpler.

Any Yaesu FT-680r 6m owners out there ? Has anyone ever compared the
rig to another 6m unit ??

Does the 680 have a good receiver in it ?? I compared the 680 to my
FT-817... the 680 seems deaf on rx compaired to the 817. I thought it
would be a hot rig...

Any thoughts ? OR is it just my 680, and it needs tweeking...

Email direct
mkx 'at' sympatico.ca

73 Mike

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Dear friends,

I am quite a novice Usenet user, so please be a bit patient with my writing and compliance to the rules. I promise to improve later on.
I am writing from Greece to request your precious help with an Internet Radio receiver and CD player I am planning to purchase.
It is manufactured by Cobra Electronics Ltd and its exact name is "Cobra CIR2000a". I consider it to be almost perfect, as it satisfies all my demands.

The problem is that unfortunately I haven't yet noticed any local dealers of Cobra Electronics here in Greece, or even in any other European country, so I would be grateful if you could tell me if there are really any. For example the radio is available on amazon.com and some other e-shops in the United States, but it can't be found in any European e-shop.

If there aren't any European dealers of this product, it means that it will need to be imported from the United States, but in this case its price is going to be very expensive. This is due to the high customs tax rates which are enforced by the authorities when importing products from countries outside the EU.

If the Cobra CIR2000a can't be purchased from anywhere in Europe, then please let me know of other similar products that combine a traditional FM radio together with a Reciva compatible Internet radio receiver and a CD player.

*** Earnest Request ***

If it 's possible, please forward a copy of your answers to tsioupros@gmail.com as well, because I don't have permanent Internet access and as a result it 's a bit difficult to scan the Usenet for answers.

Thank you very much for your attention and patience,
Best and warmest regards to you all,
Th. Tsioupros (tsioupros@gmail.com)

<<< Big Cut>>>

Theodoros, not to complain about you, but did you try Google ?

It brings me to this page
http://cobra.com/products/internet-radios/cir-2000-a-internet-radio which
has a Where to Buy Item.

This shows on http://cobra.com/support/countrysearch result for different
European countries including Greece.

Teleimpex S.A. 30 Koumoundourou
Alimos, 174.56 Greece
Phone: 0030.210.993.04.12
Fax: 0030.10.993.57.53 Email: tele@tele.gr
www.tele.gr Greece
 Products
Two Way Radios (PMR) & Marine Products

I wonder however why someone without permanent Internet Access would like to buy an Internet radio....

Kind regards,
Ben Zandstra

I will look into these and see. What I remember from the post I once
saw was that they had to hotwire the encoder they used. I have not
found a drop in replacement other than the original part.

Matt

The encoder issue I am having is not an unusual thing.  Most 747's get
this issue.  I would have thought that at least someone else had done
the replacement using another encoder.  The most annoying thing about
it is it not having the smooth dial to spin.

Larry from memory they were made in the 60's.

Here is and link to the original instruction manual, maybe you could buy the mount off HY-Gain and fab the rest.

http://www.cbtricks.com/ant_manuals/hygain/model_500/graphics/hy-gain_500_penetrator_1975.pdf

Larry,
Just had another look, and the HyGain Penetrator was .64 wavelength long,
this site:
http://www.wolfradio.com/ant_new.htm

Wolf Radio manufactures them by the look of it, and their Point 64 FMBC
maybe the closest to the real McCoy, but at $160?
Cheers

```
John

I my early ham radio days I had a model 15 and a model 28. I always dreamt of
having a model 26, but I have never seen one in reality, just on the books..

Pity is that Gloucester is some 3500 miles away from where I live, otherwise you
would see me knocking at your door.

The trick is to find someone in the are who is being transfered to Rome and their company is shipping a container of houshold goods for them. Since the price is by container, and not by weight, it is often cheaper to ship a container that is not full than to do it by "lift van" (a custom made wooden crate).

In years past people wouldstuff their containers with household goods that they could not get outside the US, such as toilet paper, disposable diapers, canned tuna, however I think those days are long gone.

If you ask around, you might find someone who is willing to accomodate you.

Geoff.

Thanks for info, but finding someone close to the present owner and willing to
ship a container to Rome may not be that easy.

Anyway I will try... who knows.

I have an amp supply LK-500NTC that I am trying to peak up on each of the fixed no tune circuits. I know I have a bad ceramic telflon disc on 160 (won't load at all) and on 15 the best I can do is 1100 watts
with just over 800 ma plate current. On bands that work oK (1300 watts out) the plate current is 550 ma. So I feel one or more of the disc caps are either bad or changed value.

If you have some experience with the no tune versions of the LK-500 I would like to get your suggestions.

Hi,

I am selling my KL-400 400 watt solid state broad banded amp because I never use it.

RM MOD.351/P AMPLIFIER 60-200W (KL400)

Very high power solid state linear amplifier with built-in preamplifier (25dB), the output power is variable in 6 steps.

No band switching necessary.

Technical Specifications:

Frequency Range 3-23 MHz

Modes AM/FM or SSB

Input Power 1-10 W AM/FM, 2-20 W SSB

Output Power 70-200W AM/FM, 140-400W SSB

Current Drain 12-24 amps

Power Supply 13.8V DC

Size 170mm (w) x 62mm (h) x 210mm (d)

(These sell new for $249.95 plus shipping)

Click here to see a picture of it: http://bit.ly/9tSaa

The amp is in Like New condition both physically and electronically

My price is $175.00 plus FREE SHIPPING in the lower 48 states

Email me at: wmtell@gmail.com

Bill

There may not be any bandswitching, but if you do not follow the amp up with appropriate switchable low pass filters, it will have tons of harmonics and in the old days, you'd have the FCC at your doorstep.

The original 259 has the counter on a daughterboard.  There appears to be a
trimmer cap on it.  Adjusting it is another matter, but it might be
possible to drill a hole in the main board to allow access to the trimmer.

Disassembling the 259 is non trivial, but easier than putting it back
together.

Well it isn't American made, it is designed by Americans and manufactuered over seas. The K2 is American made because the buyer puts it together, but once again most of the parts come from overseas.

The K3 can also be purchased as a kit, and is manufactured in Aptos, CA.

Hello

I have bought an antenna in secondhand an antenna MFJ-1782. I have some problems to obtain good results for the SWR .My antenna is in vertical polarization. I use this antenna with a battery..

I have only a good SWR in the ten meter band (1.1) but when the frequency degreases , the SWR increases very rapidly . On the 20 meter band , the SWR is near 3-3.5 - The coax is H100.

I tried with differents lenghs of coax . (5 , 10, 15 meters) and the result is the same.

I don't know what I must do.

I write you (in bad English and excuse me) to say if you have a solution to my problem.. I thank you in advance

One of the guys here talked about losing internet newsgroups and some of us said how he can still get them.

The "other" end of newsgroups is that -- particularly where there is any chance of politics to be involved -- they are being taken over by kooks and extremists who practice one form or the other of shouting, huffing-and-puffing, yelling-and-screaming, beating-the-chest, posting one liner insults (or even one or two word insults), name-calling, cussing, trivia, superficialities, and other meaningless-purposeless Neanderthalisms.

The commercialization of the internet (blogs and website chat rooms) allows the owner of the blog to censor out the "noise" but then it might not be all noise, just something the owner doesn't like.

One of the technical problems of blogs and websies is the chance that they can download malicious code onto your computer (keystroke loggers, rootkits, viruses, spyware, trojans, etc), and collect personal data on you, too. Software firewalls and AV are helpful, but a lot of them, too, collect data on you (so they are spyware, too).

With ID theft said to be the fastest growing crime, I'm wondering if the degredation in the quality of internet security is, some few years in the future, going to lead to another form of economic melt-down as people start geting seriously hit in the wallet by the hackers.

??? How is this any different from what the newsgroups used to be 5, 10 or 15 years ago?

> The commercialization of the internet (blogs and website chat rooms)
> allows the owner of the blog to censor out the "noise" but then it might

And? Who gives a shit? As if blogs and such are in any respect relevant to anyone and anything.

And if you think that the newsgroups are full of illiterate idiots who are hardly able to scramble together three or four coherent words, you should read the comments sections below any Youtube video.

> One of the technical problems of blogs and websies is the chance that

The risk is minuscule. You run a bigger risk contracting a swine flu virus from a phone conversation.

> With ID theft said to be the fastest growing crime, I'm wondering if the

We've been hearing the same tired story ever since the Internet got invented. The only thing that is the fastest growing in this whole story is the news media bleating about this "huge threat" in between the Cheerios and Viagra commercials, then it's off to another "huge threat" for two minutes, then Cialis and Geico.

> ??? How is this any different from what the newsgroups used to be 5, 10 or 15
> years ago?

I perused many NGs almost 20 years ago and the content was much more
thoughtful, substantial, and polite. Today its like the X and Y generation
have taken over.

>> The commercialization of the internet (blogs and website chat rooms) allows
>> the owner of the blog to censor out the "noise" but then it might not be
>> all noise, just something the owner doesn't like.
>
> And? Who gives a shit?

Well, me for one.

  As if blogs and such are in any respect relevant to
> anyone and anything.

In technical areas there are serious authors and serious readers.

> And if you think that the newsgroups are full of illiterate idiots who are
> hardly able to scramble together three or four coherent words, you should
> read the comments sections below any Youtube video.

I don't go there, but have read from people who do and they say there is a
lot of rubbish there.
rub

>> One of the technical problems of blogs and websies is the chance that they
>> can download malicious code onto your computer (keystroke loggers,
>> rootkits, viruses, spyware, trojans, etc), and collect personal data on
>> you, too. Software firewalls and AV are helpful, but a lot of them, too,
>> collect
>> data on you (so they are spyware, too).
>
> The risk is minuscule.

Looks to me like you don't keep up with computer security news.

  You run a bigger risk contracting a swine flu virus
> from a phone conversation.

Do you mean with a person at the other end who has the cold or by handling
a handset that was just used by a person who has the cold?

>> With ID theft said to be the fastest growing crime, I'm wondering if the

> media bleating about this "huge threat" in between the Cheerios and Viagra

> commercials, then it's off to another "huge threat" for two minutes, then
> Cialis and Geico.

My cc commpany did send me a new cc card because they said my old number was hacked.

I have received several letters over the last few years giving notice that a database was breeched and that I should be on alert for anything that might involve.

One of the banks that I do business with put out a public notice about ID theft and crime and being careful about bank data, account numbers, etc.

I have found two viruses on my computer disks using AV. Since then I am more careful about a lot of things.

A personal friend who confessed that he visited some porno websites also found his computer not working right afterwards and spent a couple of hundred bucks in phone support to get the malicious code off his box.

Our garbage can, containing our garbage in black plastic bags, had those bags removed by persons unknown and not the garbage truck. Fortunately we had been shredding anything with numbers etc on it for some time.

My wife rents commercial office space. I decided to start making backup copies of all working files, including those that needed confidentiality, and deleting the copies on the HD and then over-writing all unassigned spaces on the HD with zeros. That night her office was broken into, two metal file cabinets broken into, and the computer stolen. I was glad they did not get the confidential information.

In the last nearly ten years, several of my computers were hacked and needed to have the HD nuked and all SW re-installed, and in one case they put something on the HD that was not removed by blowing the partitions and reformating. One box, running Linux, was also hacked.

I have lunch, once a month, with ham buddies in a club. Most of them have at least one story like one of the above.

Another personal friend has a wireless network in his house in a suburban neighborhood and he noticed something odd on his computer and looked outside the house (at night) and saw a guy parked outside his house, laptop screen lighting up his face (its called "war driving" and offshoot of war dialing from BBS days). My friend decided to shut off his home wireless network power switch and he look out again and the guy drove off.

I'm not making this up.

Have you ever heard that story that the Titanic is unsinkable? I wonder if there is some wisdom to that story?

Confessed?  Are you a priest?

You should recycle the shredder output, not put it in the garbage.

I don't understand the question.

> Are you a priest?

No.

> You should recycle the shredder output, not put it in the garbage.

It makes a mess at the recycling center. Plus, it represents less than 1%
by weight of our garbage. We do take our newspaper disposables, however,
to the recycling center, and is probably a good 75 pounds per three weeks.
We're starting to tear off the address labels, too, and shred them
separately.

What do you do?

Nothing to do with the generation gap. The stupidity index is a lot
higher today than at the beginning of the Internet/Usenet because today
every trailer trash moron and his mother has access to it.

The risk is minuscule, provided you:

- keep your OS and browser updated with security patches
- run a s/w or h/w firewall, preferably both
```

- are not stupid enough to download and run unknown files

By far, the majority of the credit card ID theft occurs at the vendor
end, by unscrupulous employees. There is no such thing as "hacking" a
credit card #.

> I have received several letters over the last few years giving notice
> that a database was breeched and that I should be on alert for anything

Where the hell do you bank, the Al Capone Credit Union? I have accounts
in four different banks and I haven't received any such notice, ever.
Granted, this is a testimonial "evidence" like yours, but still...

> One of the banks that I do business with put out a public notice about

Yes, because apparently there are still people out there who think it's
a good idea to write their PIN numbers on cards, leave doors unlocked
overnight and send money to Nigerian princes.
>
> I have found two viruses on my computer disks using AV. Since then I am
> more careful about a lot of things.

??? What, you mean you reduced the number of unknown exe files you
download now?

> A personal friend who confessed that he visited some porno websites also
> found his computer not working right afterwards and spent a couple of
> hundred bucks in phone support to get the malicious code off his box.

Iow, a computer illiterate clueless idiot gets surprised after the free
Underage Russian Midget Lesbian Amputee website downloads turn out to be
something else.
Tell your friend to look for Adam's apples on hookers *before* paying.

> Our garbage can, containing our garbage in black plastic bags, had those
> bags removed by persons unknown and not the garbage truck. Fortunately

> we had been shredding anything with numbers etc on it for some time.

Holy shit, you are like the Hercule Poirot of the ID theft world -
everywhere you turn, someone is stealing your ID.
The vast majority of ID theft occurs where it's convenient, low-risk and
profitable. Dumpster diving is all three at the malls and business.
Garbage diving in residential areas is none of those three.
Phishing for info is all three through massive e-mail spam effort.
Hacking computers individually and browsing for files is none of those
three.

> My wife rents commercial office space. I decided to start making backup
> copies of all working files, including those that needed
> confidentiality, and deleting the copies on the HD and then over-writing
> all unassigned spaces on the HD with zeros. That night her office was
> broken into, two metal file cabinets broken into, and the computer
> stolen. I was glad they did not get the confidential information.

Now you're just rambling. Low-level formatting of hard drives does fuck
all to protect from ID theft. The thieves who stole the computer chucked
it for a couple of bucks so that they can buy drugs. Their reseller is
more than likely interested in reselling the stolen goods quickly and
making a buck, not in wasting time browsing through millions of files on
hundreds of hard drives.
ID thieves are in the business of stealing IDs. This means getting
thousands of credit card, social security numbers and addresses at once,
using a fraction of them quickly and disappearing. It is a wholesale
business. They don't fuck around trying to get one number at a time -
hence nothing that you describe so far fits their modus operandi.
>
> In the last nearly ten years, several of my computers were hacked and
> needed to have the HD nuked and all SW re-installed,

Yeah, so? This only shows that you run totally unprotected, unsecured
and vulnerable systems.

> and in one case
> they put something on the HD that was not removed by blowing the
> partitions and reformating.

Bullshit. What day is it, an International Urban Legend Day?

> One box, running Linux, was also hacked.

Highly unlikely, unless of course you're a big enough idiot to install
the system with default passwords and logins.

> I have lunch, once a month, with ham buddies in a club. Most of them
> have at least one story like one of the above.

Then most of your buddies are clueless, too.

> Another personal friend has a wireless network in his house in a

> suburban neighborhood and he noticed something odd on his computer and
> looked outside the house (at night) and saw a guy parked outside his
> house, laptop screen lighting up his face (its called "war driving" and
> offshoot of war dialing from BBS days). My friend decided to shut off
> his home wireless network power switch and he look out again and the
> guy drove off.
>
> I'm not making this up.

This is getting better and better. Your friend has a home wireless system that he doesn't even bother password-protecting, then both you and him wonder how your systems get hacked and who knows what else?

Btw, I can easily tap into at least three or four of my neighbors' wireless networks at any time, too - no passwords, as you can imagine. So whose fault is it if their computers get hacked? You leave $1000 in your driveway, you think it's going to be there the next day?

> Have you ever heard that story that the Titanic is unsinkable? I wonder
> if there is some wisdom to that story?

There is also some wisdom in the story of how you don't stick your dick in the alligator's mouth unless you want to have it chopped off.

Not enough because the firewall will pass files (such as HTMLs, XMLs) that
a firewall would not be configured to reject based on signatures.

> - are not stupid enough to download and run unknown files

This is almost impossible to do in a world where automatic updates are
common and trojanized websites exist.

When I went into further detail with them, they told me where the
"compromise" took place and it was nowhere near me.

  There is no such thing as "hacking" a
> credit card #.

They've even got chips that get replaced in walmart readers where they
grab the numbers and they get sent to a 3rd party which is the hackers.

They've got keyboard overlays at gas stations where they grab the cc
number and your PIN as soon as you enter it.

The old trick: the ATM machine. hacked so you put in your cc, then the
PIN, and no money comes out, but they have your numbers.

Yeah, your cc number can be hacked.

I'd rather assume that than someone is getting free ballast for their
sailboat; particularly when the security media have talked (and have
statistics on) hacking garbage in garbage cans.

> The vast majority of ID theft occurs where it's convenient, low-risk and
> profitable. Dumpster diving is all three at the malls and business. Garbage
> diving in residential areas is none of those three.

The garbage can was in a commercial neighborhood. But, I'd even be careful
in residential areas.

> Phishing for info is all three through massive e-mail spam effort.
> Hacking computers individually and browsing for files is none of those three.

I've obtained a number of used computers, some from thrift stores, some by gifts: all had personal information that the owners should have been worried about.

And, there is quite a lot of articles on this in the media.

>> My wife rents commercial office space. I decided to start making backup
>> copies of all working files, including those that needed confidentiality,
>> and deleting the copies on the HD and then over-writing all unassigned
>> spaces on the HD with zeros. That night her office was broken into, two

>
> Now you're just rambling. Low-level formatting of hard drives does fuck all
> to protect from ID theft.

Low-level formating is for head tracking. You never need to re-low level format. You are talking about high level formating. You do that, and then you have to re-install everything. You only need to zero out the unassigned empty disk space. There are utilities to do this, such as Norton's that writes zeros to all unassigned space. Its faster for me to unzip a compressed file of zeros.

The thieves who stole the computer chucked it for a
> couple of bucks so that they can buy drugs.

It was never found so we don't know what they did, or why. However, word around town (I know people) is that a lot of computers were being stolen.

Their reseller is more than
> likely interested in reselling the stolen goods quickly and making a buck,

Premature conclusion based on speculation.

> not in wasting time browsing through millions of files on hundreds of hard
> drives.

Most people put all their files under the folder "My Documents" and not burried 27 directories deep in "system" folders.

> ID thieves are in the business of stealing IDs.

And, there is a lot of it going on. And, everyone I meet falls into one of two categories: i) What, me worry? (most people) and ii) a few that take precautions.

This means getting thousands
> of credit card, social security numbers and addresses at once, using a
> fraction of them quickly and disappearing.

This is only one of several approaches in the ID theft criminology.

> It is a wholesale business. They

> don't fuck around trying to get one number at a time - hence nothing that you
> describe so far fits their modus operandi.

There is a whole spectrum of ID theft. From opportunistic beginners to the mass market. Articles say if you want good cc numbers, you can get them now for as low as 50 cents per number and so crooks maybe buy ten or twenty and start using them whereever they can.

>> In the last nearly ten years, several of my computers were hacked and
>> needed to have the HD nuked and all SW re-installed,
>
> Yeah, so? This only shows that you run totally unprotected, unsecured and
> vulnerable systems.

On the contrary but if you want to tell me you are running an invulnerable system, then you really can't prove that.

For example, a few years ago I read Ed Skoudis' book "Malware--fighting malicious code" and newer editions have come out. Basically, hackers can do anything. You can never prove your system has never been hacked. All you can say is something like "My AV has not detected anything" which means your system may have a rootkit on it that the AV can't detect.

You are always vulnerable to infection if the virus comes to your box before the AV signature comes, and if the virus can hide itself well, then even after the signature comes, you're screwed.

>> and in one case they put something on the HD that was not removed by

No, but I know it was hacked.

>> I have lunch, once a month, with ham buddies in a club. Most of them have
>> at least one story like one of the above.
>
> Then most of your buddies are clueless, too.

No, they are responsible, careful guys who noticed fishy things and they all managed to avoid, one way or the other, getting into deeper trouble.

>> Another personal friend has a wireless network in his house in a suburban

>
> This is getting better and better. Your friend has a home wireless system
> that he doesn't even bother password-protecting,

What this, and all of my other examples, show is that quite a large
fraction of the people are careless about their computer security.

  then both you and him wonder
> how your systems get hacked and who knows what else?

Over recent years I've read four books on hacking to teach myself just
what these guys can do. In addition to my personal experience, plus
numberous articles in some five computer trade periodicals that I also
subscribed to, hacking comes up as a major problem that does not get
sufficient attention.

I take many precautions to reduce my vulnerability.

> Btw, I can easily tap into at least three or four of my neighbors' wireless
> networks at any time, too - no passwords, as you can imagine. So whose fault
> is it if their computers get hacked?

I'm not sure if you are trying to just be sarcastic, or sarcastic and
cynical.

  You leave $1000 in your driveway, you
> think it's going to be there the next day?

Like my original post, I do recommend to everyone (and give examples) that
they need to tighten up their acts.

I also do not leave money in my driveway.

>> Have you ever heard that story that the Titanic is unsinkable? I wonder if
>> there is some wisdom to that story?
>
> There is also some wisdom in the story of how you don't stick your dick in
> the alligator's mouth unless you want to have it chopped off.

Most people have an intuitive notion to stay away from aligators, but you
missed my point that the Titanic was overpromoted as unsinkable and
everyone fell for it.

Coming back to your analysis that all the new stupidity on the internet is due to the trailor trashs getting access (that maybe they should never have gotten to begin with), I would say that your attitude should have been more along the lines of trying to correct a bad situation instead of just leaving it as a bunch of "clueless" people.

Of course, there really are sociological and marketing interests that consider "X-gen" and "Y-gen" personalities as new phenomena and declines in test scores of US kids over the last few decades represent objective evidence of a general decline rather than your simplistic opinion.

Oh, your talking about the guy who told me he got his computer screwed up by going to a porn website.

Yeah, its "wrongdoing" if he finds out afterwards that he could have avoided trouble by not going there.

What is funny is that he did it a second time, and got his computer screwed up again, so he didn't learn his lesson the first time around.

And, I remember reading an article which listed the kinds of websites that are most loaded with malicious code. Good to stay away from them.

They should be happy getting my 99% of recyclable paper in the form of unshredded newspapers and magazines. Our shredder output volume is pretty small.

The end of usenet is when idiots decide a newsgroup is a hangout and
they post all kinds of off-topic junk rather than go where the discussion
belongs.

Yes, it's bad enough that someone posted here about their usenet problem,
when there are plenty of newsgroups including local, where they could
have posted.

But now you start another thread of an even more off-topic nature, and
then let it slide further off topic, and you are the major poster in this
thread.

You've just helped to kill newsgroups, idiot.

And you think what you posted above is less off topic?

And, what positive contribution did Alan Ford make besides his confused rant full of Bart Simpson bratiness?

Oh, I get it now, you expect me to read your mind and come up with exactly, perfectly, completely just what YOU wanted to hear in a post, and on-topic exactly as you consider it and according to YOUR standards of what is an acceptable topic?

And, the guy who was more interested in whether _I_ was a _prude_ than whether the average computer user on the internet might consider that they might be exposing themselves to malicious code more than they think. Maybe that guy was really implying that having an insatiable need for porno websites is normal?

Fine, you guys can just sit there and lurk until exactly what you want to hear shows up. I try to inject something practical that contributs to an awareness of a problem too many people ignore and what happens? The real idiots come out of the woodwork.

I've been on newsgroups for more than 15 years and it never ceases to amaze me how many guys out there want to be "net cops" and preach about what is on or off topic, tell someone else essetially that they posted something they didn't like, or complain that the content of a thread drifts off the original topic. Why don't you guys get real and notice that conversations in all social contexts, lunch groups, clubs, family get togethers, etc., all drift all over the place.

Oh, maybe you want a moderated newsgroup? Just wait till the moderator tells you to change something in a submitted post.

The other thing that may be causing the rise of blogs and chatrooms over newsgroups is eye candy. With graphical content on websites totally unlimited in terms of color, resolution, animation everyone is being mezmerised/hypnotized to substitute superficial eye candy gratification for intellectual content and substance. Funny I don't heare anyone complaining about the malicious code they are exposing themselves to, or the constant blast of pop-up advertising, or other advertising.

And, why is ham radio a dying hobby? Kids don't need to take a test and get a license; just go out and buy a computer and plug it in to the internet. Or the other big thing: cell phones (don't need a license there either and they are smaller than handi-talkies) and I can drive around and if there are more than five cars near me, then at least one of them has a driver with one hand holding a cellphone up to his ear, and sometimes I even see them looking down on the cellphone (texting).

Oh, yes, the kids are now (articles in the media saying this) doing "sexting" (sending cellphone camera imiages of themselves naked) to each other. I guess that is another thing for that non-prude guy to be happy about.

Sorry to bother you guys in your hammocks down on your south sea island beach under the balmy sun, far away from the depression, who don't have a concern about anything in the world until it involves something you don't want to hear about.

127.0.0.1 is your friend. Get and use a hostsfile, and your computer will be a lot safer.

You'll also be amazed at the "legitimate" sites that are trying to put stuff on your computer....... One needs not surf porn to get a jacked up computer.

I have heard that kenwood either will change the display or send you the
part for free.
Don' remember which but call them!
Good Luck,  73

In every group there are a few individuals who would like to be "net cop" and be a medieval king: everyone obey MY^ rules, but I don't have to obey my own rules.

More seriously, what kills newsgroups is a less than critical mass of people who are willing to author _any_ posts, including OT posts that draw other people out of their lazyness through the principle of "I'm going to let someone ELSE do all the work."

I have a Viking II that the glass in the meter came loose. I'd rather not disassemble the front panel (since it looks to be a lot of work) to remove the meter which is behind a RF proof shield, so I'm thinking of just gluing the glass in a few spots. What would be good for making the glass stick to the meter case?

73, Bob AD3K

I forgot to mention even equipment gets in the mix. Ever install an HP
printer? I spent a lot of time denying internet access to a lot of stuff
they installed on my computer. Too bad they make some really good
printers... Wonder just why 4 or 5 things need to go to the net every boot?

I'll tell you another one. One of the hard drive manufacturers had, built into some memory chip on the hard drive circuit board some code that "phoned home" for reasons never really disclosed. The guy who found out called the manufacturer but the rep he talked to couldn't say what the story was.

A lot of this spyware crap came out in a lot of the computer trade magazines back 2000 to 2005 or so (computerworld, infoweek, eweek, and several others). Ed Foster had a "gripeline" column in one of the magazines and spent a lot of time on what I call the tricky-cheaty-sneaky crap (everything from spyware to shrinkwrap intimidations). He even had a website. His magazine laid him off (maybe the advertizers were intimidated and threatened to pull their ad contracts) so he set up his own website where he continued to be a forum for user gripes about all manner of things.

Another article speculated on the idea that a motherboard ROM-pack could be a place to store a virus or other malicious code and that if you ever got one there, you'd have to re-flash the ROM-pack to get it out. IIRC, the same author speculated on other locations (eg. video cards) where there is memory that can be a home for malicious code.

I bought two netbooks recently (another experience in initial frustration, but they are working fine now and connecting to the internet through a very new Sprint "mobile hotspot" model 2200, and it is pretty niffty). The hotspot is a little box about 1/3 the volume of a pack of cigarettes, you plug in the wall wart PS, and turn it on. It automatically connects wirelessly to the Sprint cell phone tower across the street. I can turn on any or all three of our XP computers (both netbooks and a XP desktop with a wireless adapter) and they automatically connect to the hotspot. I don't worry about wardrivers since the house is 700 feet from the public road at the edge of our property and surely beyond the range of the hotspot, but it also needs a hexkey put into the software or it doesn't work, Also, it does NAT so your boxes are IP-address masqueraded.

One reason Microsofts software firewall is a PoC is that it lets any outgoing packets go that want to go. So, I put on Zone Alarm on to find out that half the pre-installed aps are probing back to the mothership for updates. And, what else are they sending back at the same time? One article said that Microsoft's OSes now send back to the mother ship the serial number of any network card that you put into your slots.

And, I have a Java package that is trying to update itself and I can't find it in the installed software list.

Then, we bought a $400 HP laser printer. The printer driver CDROM disk says it needs 110 MB of HD space. Seems like a lot. After install.... ding, ding...the Zone Alarm pop-up tells me the printer driver is trying to access the internet.

I read Ed Skoudis' book and wrote the following review. Its a serious issue......firewalls and AV and anti-spyware are not enough.

One possible future danger is that the hackers and ID theft guys cause so much degredation in the integrity of internet based business that people leave the internet in such waves that it has a negative effect on our economy (another recesson/depression?). Maybe an over-reaction on my part? After all, so many people I know just are so ambivalent about computer security, even the commercial entities (cc companies, databases, etc).

Are Macs any better? I did a google search on "hack osx" and got tens of thousands of hits. After all, OS-X is based on Darwin which is based on BSD, another unix clone and there are tens of thousands of rootkits for all the unix flavors, too.

===========

March 27, 2004

This review is composed of a collection of possibly useful information from the book:

Malware: Fighting Malicious Code
by Ed Skoudis and Lenny Zeltser
Prentice Hall, ISBN 0131014056, c 2004, 647 pp.
$44.99 and, sorry, Amazon says it did not get permission from the publisher to let you get a "look inside the book" (I was thinking of putting page references along with some of my comments below but that won't work now).

After having read Hacking Exposed (McClure etal., c 1999) and Hacking Linux Exposed (Hatch etal., c 2001), and paging through Hack Attacks Revealed (Chirillo, c 2001), I thought I should get at least one good recent overview of the problems in computer-internet security to figure out where we are these days. When I read the earlier dated books, it was clear that the internet is very vulnerable. After reading this newest book, the situation is even worse. Most of this report is a summary of what I read. At the end of this post is a list of URLs that may be of use to some of you who wish to pursue in more detail what is going on out in the internet jungle. Unix and Windows are given about equal time.

Today, all code and/or instructions that can be used to compromise your computer are being more and more referred to as _malware_ or _malicious code_ instead of _virus_. Spyware is one example of malicious code and, according to the authors' definition, is not most properly called a virus. I will avoid the discussion about definitions (they have changed in the last couple of years) to focus on the main story: anti-virus software and firewalls (such as ZoneAlarm) are not enough. It may occur to people that spyware generally gets past both AV and firewall defenses (although the book acknowledges that some AV software will find some spyware and other malicious code) so here is the first indication that AV and firewalls are not enough. Viruses are now defined as, generally, needing some human action (eg. clicking on an attachement) to activate them. Worms are now defined as code that propagates over the net without human intervention.

What else is out there besides viruses and spyware? Attackers (sometimes called either hackers or crackers) have two categories of methodologies to use against you besides viruses and spyware: i) rootkits, and ii) a wide variety of what I will call "control signals" and "tricks."

A rootkit is at least one file which, once placed on your box, creates a backdoor that the attacker can use at any time to log onto your box and use it any way he wants. Rootkits have many functions including everything they need to make them extremely if not impossible to detect. At the minimum, rootkits allow attackers to communicate with your box (even though you have a strong firewall) and allow the attacker to cover or erase ALL traces of its existence including any entry or monitoring logs. Moreover, a rootkit causes the operating sytem to lie to you when you ask it questions about what files are on the box, their identity, size, etc. Attackers can even alter the rootkit so that your antivirus package wont be able to detect the rootkit even if the rootkit definition is in the antivirus package (the so-called polymorphic viruses also can change their signature and get past AVs because the definition in the AV doesn't match the new virus code). Rootkits can take as little as ten seconds to be placed on your box. There are more rootkits for the UNIX OS and their clones than for Windows, but in recent years attackers and developers have been making rootkits for all of the Windows flavors from 95 up to XP. Rootkits (as well as some viruses) can deactivate AVs and disable existing security features, as well as block access to AV update websites, in the OS.

Under the category I call _tricks_ I place not only spyware (which gets installed usually without your knowledge or permission) but a whole range of approaches (often also called _exploits_ [this is to distinguish them from _vulnerabilities_ which are due to programming sloppiness]) to gaining access to your box. Many tricks are not new but many have been developed in the last few years. Tricks involve the use of very widely available and standard and quite necessary network analysis tools. They have been available for network troubleshooting and analysis for years. When abused, these tools become very powerful tools for hacking. You have heard of FTP but did you know about TFTP? Trivial File Transfer Protocol can be used to send code to your box WITHOUT authentication! The Nimda worm got onto computers of users if they had Internet Explorer and visited an infected Website. The HTTP page, including the code of the worm, came onto your computer and as soon as it was displayed, it got activated and spread again (page 88-91). Firewalls normally allow HTTP/html protocols/files to pass without interference. Another trick is to use ICMP (pings) and hook onto the tail of the ping code a backdoor or other maleware package.

Other tricks include "Trojanized" websites. In other words, the attackers sneaked their backdoor codes into good programs that people download voluntarily and install voluntarily on their boxes. the author documented many cases of this. Do you trust the websites you go to and download from? Tricky (sorry for the pun) question.

Spyware was not even in the index of my older hacker books but it is in the 2004 book but is in the category now called "mobile code" under malware or malicious code.

Skoudis thinks the super-worms are yet to come (p.95). These will include multi-platform worms that will spread on both Windows and non-Windows boxes. The SadminD/IIS worm, released in May 2001 propagated on both Windows and Solaris boxes. Clever worms such as SQL Slammer were very small and used a different trick to propagate: UDP (User Datagram Protocol) instead of TCP/IP (Transmission Control Protocol/Internet Protocol). UDP does not need two way authentication. Taking over a web browser can also take place with special embedded scripts in a web page. "Browser hijacking" is where the attacker actually takes over control of the browser. At a minimum, this can result in your browser going to a different website and you can't change it back. The book gives several examples of scripts that you can type into the URL window and you get interesting and weird displays that you would not expect. These scripts can also launch an "invisible" browser in addition to the one you are viewing with, and instruct the invisible browser to go to another website and download malicious code. This approach can also be used to steal your cookie file. With that and your identity, they can go order anything they want from anywhere and you get stuck with the bill. Another way malicious code can get on your box is with scripts embedded in the reflected URL that you often get when you visit a home page. You type in www.xxx.com and what comes back is something like www.xxx.com/etc/blah-blah?=xzq/??/java.script/etc and it causes your browser to do something you don't want it to do. There were some 30 pages of details on this, not including many pages on spyware plug-ins and many more pages on JAVA exploits. Another trick is called Web bugs. They can be tiny images in an HTML document and when the file is loaded into the browser, it can send out a call to an attacker's web site and download a backdoor, rootkit, or virus, or whatever. The book says that some AV packages will detect some web bugs, but the variabilities are so high that new bugs will not be detected.

It should be pointed out that the Mac OS-X was mentioned in the book in a number of places. OS-X is a derivative of BSD, a Unix clone itself. A large fraction of the URLs below deal with Unix and/or Unix clones, if not OS-X directly. Skoudis spent some time discussing the possibility of JAVA viruses which could enter the Mac browser and attack the platform just as easily as they could in other Unix browsers or Windows browsers. He did not document a known case, but it may only be a matter of time. At one point in the book, rootkits were said to be available for the OS-X. OS-X will certainly be immune to viruses targeted to Windows, but it will not necesarily be immune to the other malware out there and if a rootkit is available (there is one called a universal rootkit that was said to work on all flavors of Unix) then a Mac owner is going to be as vulnerable to hackers as any box with Unix on it.

One thing missing from the book was some kind of evaluation of the references given.

So, where do we go with all of this information? There seem to be two kinds of internet miscreants. First, the so-called 'script kiddies' who just play with hacker tools out of immature interests in creating mischeif but are othewise clueless about responsibility to society. Second, the really serious hackers that are out to steal your identity, steal data but are probably even more interested in working on getting financial information from large corporation/govt/institutional systems and use what they find to commit crimes (at least one case was documented in the book). The former may number in the tens of thousands, the latter may be in the mid to high hundreds. I went to the www.rootkit.com website and registered myself to see what was there. They indicate that they have about 14,000 registered users. You can't get past the homepage without registering (If all of the downloadable files were rootkits, then there must have been 30 or so but I didn't actually count them). You can probably estimate that maybe one tenth of those 14,000 are really serious hackers. The rest are probably curious like me. At the time I was logged on, the website reported that there were five other people visiting the website. Everyone there has a hacker-type userid name (you don't think I gave them my real name, do you?). With us simple users in the high tens of millions, each one of us may be a relatively small target.

A second fact that protects us a little is that probably most if not all of us are logging onto servers or accounts where our IP address is assigned on a rotating basis. Thus, it would be difficult for them to locate any one of us out of maybe thousands if not at least tens of thousands of subscribers to that ISP (millions for big ISPs like AOL, MSN, etc). Also, if we are logged on for relatively short periods of time, hacking into our boxes will be more difficult. For people on fixed IP addresses and continuous connections, you have to worry about being hacked. Other than that, I think the really bad guys are after targets that are much bigger than a home desktop or home network.

Damaging viruses (don't click on anything) or worms (can't be stopped unless you have a definition) that appear before you have a definition can hurt you. The book makes it pretty clear that efforts to detect (non virus) malware on our boxes may not be so practical. Spyware is constantly changing so definitions for it will have to be upgraded, too. Spyware (as far as I know, mostly targeting Windows boxes) routinely gets past firewalls and even AV protection (is there anyone out there that has never gotten any spyware on their Windows boxes? I don't recall hearing much about spyware on non-Internet Explorer browsers). It may simply be most practical to have all of your working files in one directory and the OS and applications in all the other directories and do a mass backup in case you detect weird behavior or altered functions on your box. Then, reformat and reinstall everything. You should plan for this.

Do you happen to know the RCA CR-88B receiver? It si totally different from the CR-88 (without a B)!

If so, please report.

I would try the auto mirror to windshield glue they sell at the auto
parts stores.

All,
I have the regular frequency hopping issue common to the FT-747gx.
One time I came across someone that replaced the clicking vfo knob/
encoder with a smooth encoder.  Does anyone know of someone that has
done this?  I hate the clicking when trying to tune.

I can't remember now but I had thought they used a 757 or 767
encoder.  If I remember right (probably not) it was not a drop in
replacement but had to be hotwired.  Yaesu, of course, will not say
anything more than what the direct replacement is.

Thanks for your help.
matt

Take a look at the encoder for the FT-890, it is magnetic, and might work.
If I remember the Ft-890 is an upgraded FT-747  .

Bob

If memory serves me right, there may be some pots associated with the optical encoder timing.

Alternatively, if the part is no longer available, allot of the old encoders use generic opto-couplers that can be replaced. One of the three must be out

Or, there is dirt blocking the optics

Hope this helps

Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.1 2009/04/12 19:42:04
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

Looking for the manual for a High Sierra HS-900 screwdriver antenna.
It is discontinued, and High Sierra had a computer crash a number of years ago and no longer have any copies.
Anyone have a copy they could copy and email to me?
Anyone want to sell a copy of what they have?
Anyone know anyplace on the internet that has a copy I can download? Have searched with no luck.

Thanks to anyone in advance.

I have a complete packet setup for sale.
Included are as follows:
Azden PCS-3000 radio with mic and owners manual
MFJ 1278 TNC with cable, original box, manual and powersupply. Also
have extra software eeprom and ver 3.4 upgrade eeprom uinstalled.
All are in excellent condition and ready to use.
Asking $150 OBO plus actual shipping cost.

Thank you for your time and concideration.
God Bless.

Carl.

I have just put up manuals for three receivers on my website:

ITT/Mackay 3020 at <http://mikea.ath.cx/3020/>
DEBEG 2000 at <http://mikea.ath.cx/debeg/>
RACAL 1217 at <http://mikea.ath.cx/6217/>

Where the schematics are larger than 8.5x11, I mostly haven't yet
scanned them.

Enjoy.

Hi all I use an Dressler ARA 30 active antenna, how ever the PSU that I used to power it 12V has gone belly up and in doing so it has melted a resistor inside the little box that comes with the antenna.
Inside the box are 2 caps and 1 resistor, I can not get any colour code from it due to the damage so I cant simply replace it.

Does any one know what this resistor could be please?

TIA,

Mike.

Could very well be an RF choke that happens to look like a resistor. Are
you sure the preamp itself is not fried?

I agree with Joe- the preamp may have gone west. Some power inserters do use
a series resistor- but more often a choke. The only reason for it to burn up
would be excessive current draw by the preamp- or a kinked and shorted
feedline.
Put a VOM across the preamp input and see what the input resistance looks
like. Tantalums on the input often short when exposed a surge.

The only case I could see where it might be a resistor is if a MMIC like a MAR-6 is the amplifier device. In that case calculating the resistor would be easy per the device spec sheet. It doesn't look like Dressler has published a schematic, so some reverse engineering might be in order.

Amateur radio operators are responsible for their emissions. The FCC could
care less about an amateur's equipment as long as the emissions are within
spec.

It IS illegal to sell such equipment in the USA. It is NOT illegal to buy
and use it, if you are a properly licensed amateur radio operator. Once
again, amateurs are responsible for the quality of their RF emissions. They
are not responsible for their gear having type certification. The
manufacturers and the retailers are responsible for having proper type
certification.

Ed, AJ4PJ

Hi Guys.

I have a ft-50 that I have had for years now.
I am having a problem with it staying powered up.
It powers up and then shut down as if the battery is flat. It is doing the same thing even with 12v connected.

Does anyone have any ideas or had the fault before.

Any help would be very much appreciated

Darren

Joke of the Day
Updated Tuesday, May 19, 2009

---=

Q. What is the definition of a perfect lover?
A. A man with a nine inch tongue who can breath through his ears.

---=

A man placed some flowers on the grave of his dearly departed mother and started back toward his car when his attention was diverted to another man kneeling at a grave. The man seemed to be praying with profound intensity and kept repeating, =93Why did you have to die? Why did you have to die?=94 The first man approached him and said, =93Sir, I don=92t wish to interfere with your private grief, but this demonstration of pain is more than I=92ve ever seen before. For whom do you mourn so deeply? A child? A parent?=94 The mourner took a moment to collect himself, then replied, =93My wife=92s first husband.=94

---=

A policeman was patrolling a local parking spot overlooking a golf course. He drove by a car and saw a couple inside with the dome light on. There was a young man in the driver's seat reading a computer magazine and a young lady in the back seat knitting. He stopped to investigate. He walked up to the driver's window and knocked. The young man looked up, cranked the window down, and said, "Yes Officer?"

"What are you doing?" the policeman asked. "What does it look like?" answered the young man. "I'm reading this magazine." Pointing towards the young lady in the back seat, the officer then asked, "And what is she doing?" The young man looked over his shoulder and replied, "What does it look like? She's knitting."

"And how old are you?" the officer then asked the young man. "I'm nineteen," he replied. "And how old is she?" asked the officer. The young man looked at his watch and said, "Well, in about twelve minutes she'll be sixteen."

--=
-----

10 Office Rules:

10. Never walk without a document -- People with documents look like hardworking employees headed to important meetings. People with nothing in their hands look like they're headed for the cafeteria. People with a newspaper in their hand look like they're headed for the toilet. Above all, make sure you carry loads of stuff home with you at night, thus generating the false impression that you work longer hours than you really do.

9. Use computers to look busy -- Any time you use a computer, it looks like "work" to the casual observer. You can send and receive personal e-mail, chat and have a blast without doing anything remotely related to work. These aren't exactly the societal benefits that the proponents of the computer revolution would like to talk about, but they're not bad either. When you get caught by your boss -- and you will get caught -- your best defense is to claim you're teaching yourself to use new software, thus saving valuable training dollars.

8. Messy desk -- only top management can get away with a clean desk. For the rest of us, it looks like we're not working hard enough. Build huge piles of documents around your workspace. To the observer, last year's work looks the same as today's work; it's volume that counts. Pile them high and wide. If you know somebody is coming to your cubicle, bury the document you'll need halfway down in an existing stack and rummage for it when he/she arrives.

7. Voice mail -- Never answer your phone if you have voice mail. People don't call you just because they want to give you something for nothing -- they call because they want YOU to do work for THEM. That's no way to live. Screen all your calls through voice mail. If somebody leaves a message for you and it sounds like impending work, respond during lunch hour when you know they're not there -- it looks like you're hardworking and conscientious even though you're being a devious weasel.

6. Look impatient and annoyed -- According to George Costanza, one should also always try to look impatient and annoyed to give off the impression that you're always busy.

5. Leave the office late -- Always leave the office late, especially when the boss is still around. You could read magazines and storybooks that you always wanted to read. Make sure you walk past the boss' room

on your way out. Send important e-mails at unearthly hours (i.e. 9:35pm, 7:05am, etc.) and during public holidays.

4. Creative sighing for effect -- Sigh loudly when there are many people around, giving the impression that you are under extreme pressure.

3. Stacking strategy -- It is not enough to pile lots of documents on the table. Put lots of books on the floor, etc. (thick computer manuals are the best).

2. Build vocabulary -- Read up on some computer magazines and pick out all the jargon and new products. Use the phrases freely when in conversation with bosses. Remember, they don't have to understand what you say, but you sure sound impressive.

1. MOST IMPORTANT -- DON'T forward this to your boss by mistake!

He may not want to spam the group but he is more than willing to send spam individually to your email address if he reads it from a posting. He also sent at least seven other identical postings to different newsgroups instead of cross posting. The site he advertises is his. If you get spam, send your complaints to
    abuse@hostmysite.com, groups-abuse@google.com,
and to his posting host abuse@cox.net.
The registrar of his site is Godaddy so you might wish to complain there too. I have already received spam from this jerk before his Usenet postings were sent.

Have one of these in for reported problems. Have resolved most. I'm aware the early units have a common display issue; in that a unwanted line or lines appear on the display. Does anyone know, exactly, the root cause of the problem. Some insight may help formulate a less costly repair procedure. The display is a flourescent type display. I'm quite versed on display faults [and repair techniques] related to LED/LCD type screen displays. I've not dealt with this particular problem, till now. Replacement displays are cost prohibitive. Especially if the problem lies elsewhere, other than the actual display part.

Hi all,

I have a 99 Ford Escort with a back window marked as 'Ford Solar Tint'. It has a defroster in it as well. I was hoping to mount a small though-glass antenna for APRS use on 2m, but I don't know if it would be possible with that glass. Anyone have any experience with this?

Thanks.

I bet the antenna manufacturer could tell you.

This item prevents your thermoelectric cooer from draining your car
battery to the point where you can not start your car:
http://koolatrononline.stores.yahoo.net/koolatron-12v-battery-saver.html

Can something like this be easily homebrewed from a couple of 30/40
amp horn relays and a couple of pots? That would permit its use for
the same purpose in mobile QRO radio.

I tested one and it open the circuit at 11.5V and closes it again at
12.8V. The dead zone is needed to prevent cycling.

Ken KC2JDY

Here are some comments from the FAQ on Larson glass mount antennas,
taken from: http://www.larsen-antennas.com/techref_faqs.shtml

Ed   K7AAT

A: Glass mount antennas are easy to install and do not require drilling a
hole. Just be sure the antenna is mounted high up on the glass and not

over defogger wires or on reflective window tint as this could impede
performance.

Tint: Various tints affect the dielectric constant causing a higher VSWR,
poor reception or no performance.

Do not mount antenna on any dark tinted area or on an area where an after
market tinting film has been applied.

You can get a smart charger for less than that, and just keep your
battery topped-off at all times.

Ken:

If your relay "reliably" will not actuate, or will drop out at 11.5 volts, then you may wish to trust it to keep from depeting the battery so far you can't start the vehicle. However, having tried similar methods (including a variable settable sensor that then controlled a relay to allow use of "accessories" such as ham radio xciever, I found the best solution for me was to have a separate battery that powered the radio equipment (charged via a battery isolator diode) from the alternator, so the starting battery wasn't affected at all. This worked for both a tow vehicle (89 chevy silverado pickup) and a marine installation (19ft ski boat with entertainment electronics, marine and and ham radios) such that I could be on the water all day without the engine running, end up with the radios and cd player inoperable and still start the engine to return to the marina (of course, everything worked as soon as the engine started, and I had a bypass switch so I could run the marine radio from the starter battery if there was an emergency...)

Though you may want to do with only a single battery, after several different configurations, I really prefer a second battery for entertainment and radios. Thus I knew that when the radios crapped out, I still had a FULLY CHARGED battery to start and run the engine, whether on the water in the land based tow vehicle.   It's been more than a few years since I ran that configuration, but would do it again in a minute if I even thought about "long term operation" without the engine running. In the truck I currently have mobile ham radio, I don't have the second battery, but am careful to start and at least idle the engine if I run the radio for more than an hour, just to keep the battery up to normal levels... I probably helps that the radio isn't spec'd to run below 12.0 volts, so I tend to watch the voltage that shows on the radio display and any time it looks like it's dropping, I get the engine running. Of course, as I age, I find my operating time between moves has been decreasing, so the actual times I have to remember to start the engine are pretty rare... [sigh]

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Please help me to solve my omni-d problem.... It lost 90% of the receive side.I can barely hear signals that were usually 30 over 9.but what gets me it is that I flip the switch in the back to "receive" instead of leaving it in the transceive position and use the receive jack(not the pl-259) and it receive normally.I opened it and checked the relay(contacts) and they are ok....I took a wire antenna and jumped it to the "input signal pin" of the rx mixer and the reception cames back....any ideas guys.......

I used to own an Omni D 546, and I did have some problems with it, but not a receive problem but an email to TenTech, got me going in the right direction, and actually the manual that is supplied gives a huge amount of info on fault finding etc. Perhaps you could try to find a copy?

Hello,
I wonder if anyone has a copy of a schematic for a HC-500 Universal Antenna Coupler made by Tokyo-Hy-Power Labs?

I have one that has been mutilated and a few parts are missing, but can be fixed.

Love to get it going.

Thanks
73

How did you check the relay contacts? My neighbor, now SK, had one
with a problem that sounds like yours and it was the relay. You cant
always tell just by looking.

Jimmie

I've been using usenet for about 15 years with various names. I just read
the announcement from AT&T that they are ending usenet services very soon.
That sucks. But so does growing old in general. Still, quite often it beats
the alternative.

To all of those that I have chatted with over the years and whom I may never
chat again, thanks. It's been fun.

Grab the Schematic, ands start looking where the Transceive Input and
the Receive Only Input connect and then follow the Transceive line back
and test each component clear back to the connector.... You will likely
find it in the contacts, but it may be a PIN Diode Switch, or T/R Relay
problem depending on how the radio was designed...

I use this:
```

http://www.forteinc.com/apn/index.php

$2.95 per month gets 12G download per month... that is a lot of data!
It is less expensive than a magazine subscription

This is a trend in ISPs. For the past year I've used a free service
called Tera News after my ISP cut this access. The ISPs for the most
part didn't actually run the service but contracted with a service
such as Giganews. It is possible to get access through Giganews as

and individual, but they do have fees. The free service has some daily limits but I've never exceeded the daily limit for text based things. If you are into binaries in a big way, they do offer paid services with greater downloading quantities. There are several of these services.

Because of the Spam content on many groups, Usenet popularity is down. Many groups have gone to moderated services on things like Yahoo groups where they is a little more control (sometimes) on the kook factor; or, they have private websites actually owned by a participating member and often moderated by them.

I sense that you don't know an awful lot about usenet -- since you've multi-posted this in gawd knows how many ng's.

Your ISP is merely a _connection_ to the internet (and all it's protocols.) Any "services" it provides beyond that are just 'teasers' to get folks to sign up. Sadly, as with so many things America, they are dumbing down the services they provide to cater to the klewless.

You have total freedom to avail yourself of _ALL_ the internet has to offer once you're connected.

I use www.individual.net/ for usenet -- have done so for over 10 years and through 3 different ISP's. WFM.

I use virtually _nothing_ of my ISP's services -- not DNS, not email, not usenet... Once connected to the internet I have *the entire world* across which to locate free or reasonably priced services.

There are lots of alternatives.

Use your web browser and go to;

http://groups.google.com

I think yahoo has usenet access, too.

Also use google (or any search engine) and search on "newsgroups access"

You can purchase subscriptions to unix shell accounts at many ISPs and learn a bit of unix, and use a unix email-newgroup client (there are many, but PINE is very easy to learn), and you also beat all the email carried viruses, too, because you read your email in a unix environment from your windows computer (or mac) by opening a telnet window.

You can get an almost free shell account at:

http://freeshell.org or //sdf.lonestar.org

but you have to learn a few things, too, and pay one buck activation fee and he likes a lifetime membership fee of $36 for full priviledges.

www.mv.com

and

www.panix.com

also have unix shell accounts with full unix NG access, and the usual clients.

Thanks to you and everyone else that answered. I don't know what I was thinking when I made the original post. Musta been a senior moment, but with all of the information that has been posted, I'll still be on the newsgroups.

73 everyone.

Ed, AJ4PJ

The LOAD control on my Ameritron AL-80B has almost no peak on 40 meters.
Does this indicate something is bad?

The PLATE control peaks nicely on 40M.
The LOAD control peaks sharply on the other bands.
I'm getting full output power and good reports on 40M SSB.

I'm tuning the PLATE and LOAD controls for max output with 100W CW input,
using a Cantenna dummy load.

Hi,

Is there somewhere on the web a tool permitting to listen to QSO in live (as
there is ATCmonitor to listen to air controllers) ?
Do you know an URL ?
PS. there is well Echolink, but you need to contact the OM to listen him. I
am searcging for a passive tool, like listing to a receiver tuned on HF.

Thanks
Thierry

See page 13 in the manual. They can be downloaded from the Ameritron/MFJ website.

Start with a dip in Plate current with PLATE adj.

What are you looking at for a "peak"? It should be tuned for maximum RF output from the AMP. The peak should be shallow when properly loaded.

Because of the Q of the tank circuit, the adjustment is less sharp on the lower frequencies.

Perhaps the LOAD adj. is too far clockwise. Be careful not to exceed grid current. All this should be doable with less than 80w CW.

I think I found the problem. The ALC SET control was set too low. It was
"capping" the output power. I couldn't see the LOAD peak because the ALC was
holding the power down.

ALC on those takes a little getting used to.

I bought a used HW-9 that works well except for dial accuracy. I'd appreciate comments from other HW-9 owners with regard to accuracy of theirs.

So far, I've found the 80 Meter heterodyne oscillator crystal is about 5 KHz off frequency. All the others are within about 1/2 KHz, which is not significant compared to the width of the lines on the VFO dial.

Except for the 80 meter crystal problem, it appears that frequency errors are almost entirely due to VFO tracking error. VFO frequency is correct at 0 and 250, but as much as 10 KHz off in the middle of the range.

One of the VFO capacitor rotor plates is bent away from an outer stator plate. That might be the result of an earlier owner attempting to correct the problem, or it might have come that way from Heath. Can anyone tell me if the stock VFO capacitor plates were originally straight (flat) or bent?

The VFO Shield is missing. If I can find some copper, I'll try to make one, but doubt that will correct the problem.

Hi, I have an IO-4555 Heathkit O-Scope that started spewing out smoke 15 seconds after turning it on.

Would like to find someone that can shoot me a PDF of the assembly manual with schematics. The operations manual would be nice also.

I've checked Google and Dogpile for variations and can only find a schematic for the dual trace version. (IO-4550)

A few places are selling the manuals for a goofy amount of money. I may have some files, templates, webspace, etc. that I can offer for trade.

One of two things happened. Either an electrolytic cap failed, or the power transformer failed. The power transformers on these were very cheaply made, and the high voltage winding had a bad tendency to short to the case. If it made a loud snapping sound, it was probably the transformer. If it made a smell that was more sharp and chemical than ordinary burning, it was probably a cap.

That'll probably be sufficient since the supply is more or less the same and it's a power supply problem you've encountered. You may also look on BAMA.

You should not need the manual. Find the high voltage winding that generates the anode voltage for the CRT.... measure resistance to ground and you should see at least hundreds of ohms across the winding. Then look at the supply caps.

You can also try powering it up with the case off and seeing what smokes.

If the transformer is good, it's worth it to replace the caps. If the transformer has failed, scrap it for parts and get another scope.

Thanks for the trouble shooting tips. The smell and color reminded me
more of frying resistors :-) I haven't opened her up yet to peek at
the damage.

Pull the case open and look inside!  If you see some big resistors in
the power supply gone open, check the capacitors downstream of them for
a dead short.  You'll never know until you open it!  They are fun and
easy to work on... everything is laid out very openly and the basic
design you can figure out by looking for the most part.

I have a Mint RX-350 Shortwave Receiver with manual and origional receipts.
An awsome receiver!
100kHz to 30 MHz Demodulation, filtering, passband tuning and AGC are all
done by digital signal processing (DSP). In addition the DSP functions
include an automatic notch filter and adaptive noise filtering. Reception
modes supported are AM, USB/LSB, CW (700 Hz BFO offset) and Digital (1000Hz
BFO offset). The receiver has 34 available IF bandwidths for any type of
signal under all reception conditions!

I also have the optional 302R remote tuning knob/keypad and the 307B
external speaker enclosure which matches the receiver. AC cord and DC plug
as well.

Serious interest only please. Email me at jodi.ron@gmail.com for more
information.

Thank you,
Ron

If you want a vintage scope get a Tek, since the toob models have excellent parts availability since no revenue users want them. The Heathkit trafo could be rewound if you really want an educational project, but most were not very good scopes except for X-Y use. In the SSTV days they were ham-popular since they used a commodity jug that could be had with a P7 phosphor. that also makes a great audio level indicator if you're too cheap to buy a Dorrough.

TO BE HELD IN ORIENTAL INSTITUTE OF SCIENCE AND TECHNOLOGY BHOPAL

website-chipfocus[dot]we[dot]bs
http://chipfocus.we.bs/
www.oistbpl.com

Advances in electronics technology have led to convergence of
communication, computing, and sensor technologies onto a single
silicon substrate. Unprecedented revolution in micro, nano and

molecular electronics has brought about paradigm shifts in design approaches and novel applications of VLSI and Embedded systems. Emergence of Network-on-Chip (NoC) technologies for high-performance System-on-Chip (SoC) design has only added to the challenges and opportunities. India, an emerging world economy and a well-established leader in Information and Communication Technology (ICT) has an ambitious Nation Technology Roadmap to take on the challenges and tap the opportunities in the rapidly expanding arena of VLSI Design and Embedded Systems. Chip Focus 2006, the first National Conference on VLSI Design & Embedded Systems received massive response exceeding 700 participants. We received yet better response during 2007 & 2008. Thanks to their encouraging feedback and constructive suggestions that Chip Focus has become a prominent calendar event for the students pursuing their interests in VLSI Design & Embedded Systems
http://chipfocus.we.bs/

What is VLSI?

VLSI stands for "Very Large Scale Integration". This is the field which involves packing more and more logic devices into smaller and smaller areas.Thanks to VLSI, circuits that would have taken boardfuls of space can now be put into a small space few millimeters across! This has opened up a big opportunity to do things that were not possible before. VLSI circuits are everywhere ... your computer, your car, your brand new state-of-the-art digital camera, the cell-phones, and what have you. All this involves a lot of expertise on many fronts within the same field, VLSI has been around for a long time, there is nothing new about it ... but as a side effect of advances in the world of computers, there has been a dramatic proliferation of tools that can be used to design VLSI circuits. Alongside, obeying Moore's law, the capability of an IC has increased exponentially over the years, in terms of computation power, utilisation of available area, yield. The combined effect of these two advances is that people can now put diverse functionality into the IC's, opening up new frontiers. Examples are embedded systems, where intelligent devices are put inside everyday objects, and ubiquitous computing where small computing devices proliferate to such an extent that even the shoes you wear may actually do something useful like monitoring your heartbeats! These two fields are kinda related, and getting into their description can easily lead to another article

Program Outline

The 2-day conference would be marked by expert lectures, tutorials and workshops on Electronics Design Automation (EDA) tools and Embedded System Programming. Some of the key issues that would dominate the conference sessions are:

- Challenges, opportunities and future roadmap in Nanoelectronics
- Bottlenecks in Gigascale Design and Manufacturing
- Low power and high speed processor and memory design
- System on Chip (SoC) Design - Analog-digital-RF mixed signal
- Network on Chip (NoC) Design and Sensor networks
- Emerging process technologies and design shifts
- EDA tool issues in deep sub-micron design
- Optics inside chips =96 emerging trends and techniques
- Embedded systems - Hardware-software co-design and co-

verification

- FPGA/ASIC based embedded system design (simulation & synthesis)
- Embedded Systems for DSP, communications, digital imaging
- Programmable devices

Guidelines

- Participants are requested to reach ten minute before to prevent inconvenient.
- Participants are require to carry the receipt of the registration along.
- Participants are requested to carry the Identification cards of the Institutes/Organizations they belong to.
- Participants are requested to show their id card on demand.
- Participants are requested to switched off (not in vibration) their mobile phones.
- Please maintain silence in auditorium.
- The kits inclusive of lunch coupons can be collected from the Institute on producing the receipt of registration.

Who can Attend?
The conference is open to engineering (UG, PG), MCA students, research scholars, academics, scientists and industrial professionals.

The objective of CHIP FOCUS 2009 (The 4th National Seminar on VLSI Design & Embedded Systems) is to seek convergence of eminent scholars from across the country on a common platform to discuss the key issues and trends in VLSI Design and Embedded Systems. This would enable our young scientists and engineers to gain from the views of the visionaries and get directions from them to discover new horizons and opportunities for research, innovation and growth

Archive-name: radio/ham-radio/moderated/crossposting
Revision: 1.1 2009/04/12 19:42:04
Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

After a 30-day public discussion and feedback period to gauge reader opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider amending its charter, and permit limited simultaneous crossposting to rec.radio.amateur.moderated and one other unmoderated amateur-radio-related discussion newsgroup. We are currently trying this on a temporary basis (90 days, through early July 2009), and adopt it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently listed in the latest version of the "List of Big Eight Newsgroups" which is crossposted monthly to news.announce.newgroups, news.groups, and news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those that have been created consistent with the suggestions in "So You Want to Create an Alt Newsgroup" at:

  http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either "radio.amateur" or "ham-radio" in their names, including uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved newsgroups up-to-date. In case we have overlooked any, and a submission is rejected in error as a result, the rejected submitter can E-mail us at our administrative contact address (in the signature at the bottom of this article, and the default Reply-To for the rejection message) requesting that it be added, and that the article be approved. We may still choose to reject articles crossposted to any alt.* newsgroup with an inappropriate name, including obscene language, embedded name-calling, or encouragement of unlawful conduct.

Please direct any comments, questions, or criticisms to rec-radio-amateur-moderated-request@panix.com.

This is mainly for my son to learn to work on audio amplifiers. He's a
budding rock star that loves the sound of a tube amp. So I'm picking
up some simple test equipment for him to work with. VOM, scope, freq
counter, function generator (computer based), etc.

I also have an old electronics course for him to learn. I hope that
he's going to turn into a good repair tech for his equipment of
choice.

I do have another scope but I would rather he use the Heathkit. When I
get the time I'll tear apart the heathkit and check out that power
supply or make him do it.

Hi

This is VU2YK.

Last week I used my TS-450S and it was in perfect working condition. Amazing receiver and get unsolicited comments about nice TX audio with stock mic. The lightning fast relayless Rx/Tx switching is noiseless and any CW Ops delight. Full 100 watts out on all HF bands.

Yesterday I switched on the rig, and shock and awe ! Output power reduced to 20 watts ! All else remains same. Low SWR, Power supply rock steady. ALC indicator does not move, indicating some problem inside. I did not touch the rig in the last few days.

The important symptoms are :

1. NO ALC movement of meter
2. Power output down to 20 W on 20 M, low on other bands
3. Shack temp had become very hot last few days. Day temp in shade is 40 degrees C plus.
4.I checked all power and antenna cable connections. Receive is 100 % OK and power cable are clean. SWR is 1:1

Will appreciate any help in diagnosing and rectifying the problem.
Thanks !

73

Rahul

No ALC indication may be either low drive or low output since it derives it's indication from the output stage to reduce the drive. IP is probably low too.

Check Mic gain, DC Power (do the lights dim?) and mic connections first. Other than that, check for loose screws on the boards. Or you may have PA circuit board problems where solder joints go bad from heat or shock, usually the grounds. Just a few thoughts.

Also check to ensure that you are not measuring power output while in the AM
or FM mode. Easy to overlook.

It has been too many years since I have operated my old TS-450/AT rig, to
remember the controls and options well.

Yours has fast T/R switching time? Wow. My TS-430 had to be modified in
order to work Amtor within less than 100 miles. I used the old AEA
modification plan, which worked great and was easy to do.

Isn't there an ALC adjustment on the TS-450? I would look into that and see
if it got bumped.

Ed, AJ4PJ

Just a Note here, I run a TS-690, which is the same basic Radio with a 6 Meter extension... Look at the second Knob in on the lower lefthand corner of the Front Panel, at the Knob called PWR. It should be fully Clockwise, to get Max Power Out......

Thanks gentlemen for your valuable suggestions. I am indeed grateful. I have had this rig for than a decade and never an issue.

Yes the 450S has PIN diode switching TX/RX. Works like a charm with
full bk-in on CW. Even at 35 WPM I can hear the other station between
my dits.

My friends have pointed out to a common problem with many Kenwood rigs
of this era. Blown predriver and/or driver transistors ! They are both
obsolete therefore need careful substitution with some peripheral
component changes involved.

Since the problem occurred suddenly and not gradually I am inclined to
believe that excessive heat cased one of transistors to rupture. While
I have not yet begun work on this, I am collecting all possible
documentation before I bring out the proverbial screwdriver from its
hiding place.

Thanks again

73

Rahul

Rahul-

Unless you ran it key-down for an extended period in CW or FM mode, it is unlikely that your ambient temperature caused a transistor to fail. Power transistors normally operate somewhat higher than 40 degrees C.

Lack of any ALC reading is most likely the result of low power. The cause of low power could be a bad transistor, but is more likely a leaky or shorted capacitor loading down the voltage supply to an RF stage, or a voltage-dropping resistor that has gone high in value.

Another problem you might look into, is a connector on the rear panel, where a transverter would normally be connected. Some Kenwoods have a closed-circuit switch built into the connector, and sometimes the switch contacts get oxidized from lack of exercise. There would have been a mating connector in an accessory packet that came with the radio. If you still have it, try plugging it in several times. The wiping action of the switch should clean up any oxide coating.

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Description

Item Specifics - Item Condition
Condition: New

This is the DVD every CB or Ham Radio Operator has been looking for who likes to build their own Amplifiers.

1 to 16 Pill AMP Designs

Step by Step directions

Full Schematics

Full Color Pics of step by step build of each Box 1-16 pill

Full Parts List for each Design

And most important were to by all the parts you need is included.

This DVD makes it very easy for the Novice to build their Own Box

This is just plans we are not selling anything but plans on how to build these units and its for Educational Purpose only.

No Returns or Money back.Each DVD is checked before they are shipped to make sure they work 100%

Not to worry...it states the plans are for educational use only! ;)
Maybe it would be good for CBers to build high voltage amps if you get
my drift ;) Just kidding...they're people too...

31e RADIO FLEA MARKET in BEETSTERZWAAG on 30 May 2009

The radio flea market takes place to - 30 May 2009. Do you look for an
exotic transistor kit or a super recipient, fixed and do manufacture
kit...
or do meet of radio friends? Dan comes Saturday 30 May to the Friese
radio market into Beetsterzwaag!

Many thousand visitors come each year from the entire Netherlands and Europe to this radio flea market spectacle, approx. 100 dealers, with most diverse articles, like transmitters, recievers, power supplies, antennas, software, hardware and literature.

Additionally of businessmen in the place also a flea market with many attraction organized for large and small. There are some sales desks free at the moment on the radio flea market, you can reserve by telephone & email, contact on to take with the executive committee. Down are these addresses.

How does one find after Beetsterzwaag? From direction Apeldoorn = > Zwolle = > Meppel = > Heerenveen = > Drachten, departure after Gorredijk Tijnje comes departure (28) Beetsterzwaag.

From direction Bremen = > Groningen = > Drachten = > Heerenveen, departure after Drachten Haven comes departure (28) Beetsterzwaag.

On 2mtr, 145,700 Digi Heerenveen can one to instruct leave themselves. Inlet is from 09:00 to 16:00 MESZ, into which Cafeteria one also boarded into this time.

This whole is organized of VERON FRIESE WOUDEN. Cordially Welcome in Friesland on the 31e FRM!

Look for more information at the site: www.frm.a63.org

According to the State of Alaska it was the 49th state. At least, the
site contains video and photos showing the state's first governor
attaching the 49th star to the U.S. Flag...

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

For the last 40+ years, I've listened to shortwave with the same receiver, an old Hallicrafters S-108 that I bought when I was 12 years old.

I recently moved it out to my workshop (making the wife happy to have it out of the house), hung a 200' longwire antenna through the trees, and began listening more often than I used to do.

The old radio still sounds good, and it brings the BBC and Havana in pretty strong, but trying to listen to anything other than the strong stations is frustrating. The reception drifts, and I never really know what frequency I've got. I can guess somewhere in the ballpark, but that's about it.

Yesterday I started looking on ebay for receivers, wanting something non-portable with digital tuning. I think I'm now more confused than anything.

I don't need or want anything state of the art or expensive, just something workable that has better frequency identification.

Any suggestions on what to look for, and maybe just as important, anything to definitely avoid? Cost is a factor (the economy has gone downhill here, as well), so buying a new unit is not an option.

I appreciate any suggestions or input y'all can offer.

I bought a Grundig G5 about a year ago from Radio Shack.

About the size of two king size cigarette packages, digital readout, and almost intuitive to operate with push buttons, and is readout to one kc, and there is a vernier tuning for SSB and CW. Built in BFO is turned on and off with a button, and you can tune very accurately. PLL means basically zero drift. 2 foot telescoping antenna, can pick up almost anything in HF range. Tunes 150 kc to 29,999 khz. But has a lot of birdies (but that shouldn't affect much). At the time it was $150 and some places you can get it for $100. Built in S-meter, etc. Also does FM band as well as AM and HF. For what it is, I think its a pretty good deal.

What made the deal for me was they had one in a Radio Shack store, with batteries, and I spent ten minutes playing with it and was able to figure out how to use it (at the basic level) without reading the manual. Could not hear much because of all the noise made by all the other junk, but after I bought one and took it home to quiet home environment, I could hear just about anything my base ham transciever could hear except for the weakest signals.

Hi,

Eton E5. Spectacular sensitivity and wicked selectivity in a portable.
$150.

Another fellow mentioned a G5 from Grundig he got at RS. AFAIK, they are
the same rig inside.

Cheers!

Can you attach an external antenna to it?

I've seen the little SW receivers on ebay, and they all look like the
old portable transistor radios to me. I realize a lot has changed, so
please tell me: After listening to the old Hallicrafters all these
years, how is the small receiver going to sound? Will it receive as
many stations as the old boat anchor I've been using?

The Etons I've seen are wind-up chargers, made mostly for emergency
use.  Is this the same Eton setup?

I just read reviews on the E5/G5 at http://www.eham.net/reviews/detail/6815=
.
I think I'm looking for something that's not designed to be portable,
that will accept an external antenna, and that doesn't use batteries.

Thanks for the suggestion, though. I learned a good bit reading about
these.

The R1000 was sold, but there were several R1000, R2000, R5000.

The R5000, and maybe the others has a Yahoo group ask there
about them before you buy one.

http://radio.tentec.com/amateur/receivers/RX320D

Possibly the best of the radios that are run by a PC.
(no controls on the radio).

FYI: Grundig is a European manufacturer of radios who sold out their
line to Eaton. In some places current production is sold as Grundig in
others, the same radios are sold as Eaton. Grundig also made a line of
very good shortwave desktops.

Another good used radio is the Drake SW8,
http://www.rffun.com/catalog/commrxvr/0088.html

BTW, almost every ham radio transceiver made since 1985 has had a general
coverage receiver. Many of them require an added AM filter to recieve
shortwave broadcasts. Even with the price of the added filter, they make
excelent desktop shortwave receivers.

73,

Geoff.

If you're talking used, the Grundig Satellit 700 would fit the bill.
About the size of a college pyhsics text book and runs off of batteries
or a 12VDC wall wart. Has a telescoping antenna and a external antenna
connector. Lots of extra features -- like SSB and a synchronous
detector.

(Yep, that's the way it's spelled: "Satellit".)

HTH,
Jonesy

My recommendation is to look for an Icom R71A or Kenwood R5000. These receivers are high end table top units.
They were the top models in the 1980's and can easily out perform any of the portables currently produced.
These units have excellent crystal filtering, and can take optional narrow filters. They both have passband tuning and CW notch filters, and are stable enough to listen to AM stations in ssb mode (exalted carrier AM reception).

In SSB mode you can listen to either the upper or lower sideband of an AM signal, whichever has the least amount of interference, and make use of the narrow ssb filters and passband tuning to really dig out those weak stations.

The IcomR71A and Kenwood R5000 are very reasonably priced, and have excellent crystal filters with several optional filters that can still be found. I've seen R71A's with all the optional filters go for around $300.00, and units with the stock filters for $200.00. The Kenwood R5000's go for a bit more. The build quality of these units far exceed the plastic radios being produced now a days.

There are two problems with these radios. Both are excelent choices if you are aware of the problems and buy a radio which has had them fixed or you consider the cost of the repair/upgrade when you buy it.

The R71 and R71a had their internal programing in battery backed up RAM. Eventually the battery died and the radio became unusable. There were ROM upgrade kits (where the RAM was replaced with a permanent ROM chip) and ICOM did some sort of repair (replace battery and reprogram the RAM).

It's well worth your time to investigate one and see. Here is a web page I found searching the web for "ICOM R71 battery backed up RAM"

http://ronhashiro.htohananet.com/am-radio/ik2rnd-icom-ramboard.html

The Kenwood R5000 is a different matter. The R5000 was made with certain components "potted" with a rubber compound. This rubber compound eventually absorbed enough water from the air to cause the radio to stop working and eventually corrode the components it protected. This know as the "dots" because the display shows a dot instead of each digit.

The R5000 has a RECHARGEABLE lithium battery for memory back up. It cannot be replaced with a regular lithium battery and the front cover of the radio must be removed to access it.

All together the removal of the potting compound, replacing and damaged components and replacing the battery costs around $150 plus shipping.

As an estimate an R5000 that has its original battery and has not been "fixed" is worth around $250-$350 depending upon filters and accessories.

In any case the VHF converter is worth an additional $200 on it's own.

A repaired unit is worth around $450 on up depending upon filters, accesories and the condition.

Note that the computer interface is two parts one an add-on inside the radio and an external ttl to RS232 level convertor. It is very limited in what it can do.

The R5000 takes the same solder in SSB and CW filters as the TS-430, TS-440 and TS-450, so they are fairly common. Some of them took the same AM filter, but the R5000 version came on a circuit board while the ham version was soldered in.

The radio includes a useable 6kHz AM filter and a 2.4kHz SSB/CW filter.
A better 6kHz AM filter was available and IRC sold a 4kHz AM filter.
You could also buy a 1.8kHz SSB filter, and 500Hz and 250Hz CW filters.

There are some limits on the number of filters, placement and combinations.

There is an R5000 Yahoo group, which is a good place to ask questions.

Geoff.

No problem! :-)

Eton also has the E1, which is the non-portable version.

Cheers!

They have a whole line. IIRC, they absorbed Grundig, so inherited the goodies and lemons ;-)

Cheers!

I purchased an ICOM R-75 after using an Eton EXM1. It would suit your needs much better because it has many features, including not overloading with your longwire. Mine is used for all SW monitoring. They are great receivers. Go to eham.net for the reviews. Hope this helps. It is also a triple conversion which reduces overlaoding and images. Best, KE5LDO

I'm with LDO on this. the icom is a sweet receiver.
Universal has 4 on their used list right now.

Many, if not most, moderated newsgroups do not have the word "moderated" in the name.

Still, this group is not moderated.

My news provider carries 33,766 newsgroups. Of those, 4,986 are
moderated. Of the moderated groups, only 125 have the word "moderated"
in the group name.

Should I list the other 4,861 here, or email you the list?

> Always looking to learn...

And I'd be glad to oblige you.

An interesting sidelight which I just discovered is that 6 groups with
the word "moderated" in their names are actually unmoderated.

What your provider (or any other particular news server) carries is meaningless.
Many servers carry locally created groups for private purposes, that are not
distributed acroos the USEnet hierarchy. I have a dozen or so on my own news
servers at work.

Icom R71A in very nice condition - no scratchs or dings and works
great.  I am just not useing it as have gotten into other things.  I
live in Dover, Delaware so can do the math on shipping and I'm
workable.
http://wiki.radioreference.com/index.php/IC-R71

Asking 350 plus shipping and again this rig is in great shape!
Contact me at

ryesnake@yahoo.com

I'll negot on shipping

No troll at all. This is a problem for numerous groups -- not just USEnet, but
also Google Groups. One specific example is rec.autos.sport.f1 moderated. It has
a moderation group in name only -- just try getting a response from them, or
approval as a new poster -- which is why the group has withered away to no
appreciable traffic. I'm sure you can find others in a similar state.

Hi does anyone have the programming software for the gp360 radios as i
have recently aquired a used one and it needs reprogramming.

Thanks

Michael

Thanks for the helpful reply, Ed.  I'm aware that some moderated
groups don't have that as part of the name, so that's why I asked.  I
had guessed it didn't have one from the spam that was coming through
in the digests, and the troll posts that followed confirmed it  <G>

Thanks again!

This may be of interest to Harris RF-350K owners.

This feature enables split frequency operation for the radio.

see my web site for details.

Hello to all
I checked and renewed some solders in CRT's PCB, cause I had the horizontal axis that sometimes turn off...there were of the welding cold, I also replace the memory battery and placing one socket with two wires in a way that can be stay near the clock battery to be more accesible....BUT...after had reassembling all The receiver does'n function....
The Logic Check says all Passed for all steps execpt the DATA steps return
"0008ch ERROR or 0517ch Error ...ERROR ch Was CLEAR"

I try to remove the memory battery and nothing change

The radio does a logic check on its own when turned on, and everything passes except "DATA." It shows, "ERROR 0008 ch ERROR." Beneath that it says, "ERROR CH was CLEAR." If I command a logic check by holding down the "SPEECH" button while turning the power on, the DATA line shows "Passed," and it goes to 2.000 mHz, which it both displays and actually receives. As soon as I turn the tuning knob, the display blanks and the receiver mutes.

Pressing any of the mode switches from the muted condition brings up a display of 10.000 mHz, and it actually does receive at that frequency also. Again, turning the tuning knob kills the frequency display and mutes the receiver.

If I don't touch the tuning dial while it is on 2 or 10 mHz , I can use the up - down knob to select 2 mHz on ch 000, 5 mHz on ch 001, 10 mHz on ch 002, 145 mHz on ch 003, 430 mHz on ch 004, 2 mHz on ch 0P1, and 26 mHz on ch 0P2. I presume those are some test frequencies that reside in ROM. Turning the tuning knob at any of these frequencies blanks the display and mutes the receiver.

When one of the before mentioned frequencies is displayed, pressing either the "MHZ UP" or "MHZ DOWN" buttons locks in that frequency until the power is turned off.

The CPU seems to be OK. Various other functions it controls work correctly.

I have tried the logic reset procedure of holding down the "clear" button while turning on the power, but that didn't help.

Any Help ?

Thanks a lot
Andrea

Which memory battery did you modify? You do know that the battery that is accessible from the door on top of the unit is for the clock only. The channel memory battery is inside of the logic unit casting. That being said, there is a circuit to the clock battery board that is critical to the CPU logic and there is a bulletin that ICOM posted about changing a jumper on that circuit board (the one with the clock battery and speech chip option) to correct a memory error.

Secondly, since you probably had the front panel off to do the CRT repair, you might have a pinched wire or a switch stuck closed. I think there is a memory clear button, that if stuck could perhaps cause an error code when booting up.

HI Thanks for your reply

I modify the Memory Battery and i just added two wires and a socket
for it in a way that can be stay near the clock battery it like i
replace the memory battery....
I checked all the wires and all seems to be OK
I checked the Voltage at the pin where the memory battery was soldered
and it seems to be Ok 3 Volts
So I reset with the correct command ,at power press clear button, the
cpu reset but no more

So you told me about a bulletin that ICOM posted about
changing a jumper coul you tell me where can i find more info about it
?

Thanks a lot

Archive-name: radio/ham-radio/recruitment
Revision: 1.1 2007/09/29 18:42:47
Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/swap-guide

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.swap (and currently archived at http://www.faqs.org/faqs/radio/swap-guide/):

 radio/swap-guide
 Subject: Rec.radio.swap FAQ: A Guide to Buying and Selling on Usenet
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 6 Nov 2001 19:25:51 GMT
 Posting-Frequency: Monthly

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for

any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

This version has better support for mappoint 2009 and added support for APRS symbols and overlays, and made several enhancements. Current users please pay special attention to #2, since your current settings may need to be changed,

1. Added support for standard APRS symbols and overlays,
2. Changed the way log files are saved, now you need to provide the name of a folder where logs will be saved, the name of the log file is genarated automatically by appending the date after 'log', so old logs won't be overwritten. You need to create the folder if it doesn't exist. Leave the folder name field empty if you don't want to save logs,
3. Better signal range calculation accuracy to reflect real world operating conditions,
4. Uninstall will no longer remove tnc settings file,

Visit www.aprspoint.com for details.

Hello everyone,

I'm wondering if you can give me some advice on tracking down a used Palstar R30, R30C, R30CC. I've been looking at universal radio online and just missed one by a day. I'm guessing they are highly sought after and I'll need some special tactics for this mission. I would appreciate any leads! Cheers!

Thanks for the tip.  I'll get on it.  I'm new to this whole world and
thought that a Palstar might be something easy to start with.  But I've
been reading some reviews on it and people keep suggesting that it's
good for AM and mediumwave but not so much for shortwave.  All I'm
looking for is a good solid worldband radio that will allow me to
listen to remote stations.  I won't be doing anything too serious.  Is
Palstar good for this?  I appreciate any advice.

The Palstar is a great little radio with few 'bells and whistles'.  I
bought one about a year ago after visiting the Palstar factory in nearby
Piqua, Ohio.  They had a Drake R-8 and a Lowe HF-225 in their test lab.
I turned the knobs on all of the receivers to compare their performance
using the same antenna.  The Palstar did not have the performance of the
Drake, but the selling price is a LOT less.  I was considering
purchasing the Lowe, but the Palstar won me over.

Found this on eBay
http://cgi.ebay.com/End-Caps-for-Cushcraft-Trap-Antennas_W0QQitemZ280322899622QQcmdZViewItemQQimsxZ20090315?IMSfp=TL090315125005r16898
Have no idea if the seller is good or not, just an idea.

Also, you might want to call MFJ.
I believe the traps on the Hy-Gain and Cushcraft three element beams are the same size.
You could call and ask to be sure.
If so, I was able to buy a complete set for a real old TH-66DX a few years ago with no problems.
Worth a phone call anyway.

Good luck finding the trap caps.

Sam - K7SAM

Greetings from VRoute Consulting Services, providing business
solutions and recruitment services around the globe.
Currently recruiting for Power wave Technologies (www.powerwave.com)
is a global supplier of end-to-end wireless solutions for wireless
communications networks. It designs, manufactures antennas, multi-
carrier RF power amplifiers.

Work Location: Hyderabad
Position: RF Engineer

Education: Bachelor=92s/Masters Degree in Electronics & communications
engineering or similar technical discipline.

Job Requirement: Requires 2-5 years of professional experience in RF
circuit design/development, preferably including the knowledge in
digital communication modulation techniques
=95 Requires a working knowledge in small signal designs of LNAs, small
signal Amplifiers, Synthesizers, power dividers, couplers, switches
=95 Require good knowledge in designing Class A,B Power amplifiers,
feedforward power amplifiers, high efficiency power amplifier design
techniques and pre-distorters
=95 Experience with RF Design tools i.e., ADS, AWR, HFSS, MATLAB...etc.

If this interests you then please do forward your updated profile to
for further proceedings.

Also we appreciate if you can forward this information to your
friends.
Look forward hearing from you soon. Thanks for your time.

Regards,
Vinod

I have the same problem. I wonder how bad I really need them. They
have been missing quite a while and $24 seems a little pricey for
bottle caps.

That's a really hard call, and it depends lots on your answers to questions like
o    Is there lots of D-star where you use your handhelds??
o    Are you interested in using D-star?

I personally have no interest in it, but know hams who do. There's not much
build-out of D-star where I am, but some areas (e.g., Minneapolis and its
surrounds) have a fair amount.

I can't answer your question for you, but I hope this helps guide you to
your own answer.

Very 73, de

D-Star value is somewhat subjective, but be certain to compare the
91AD with the 92AD. The 92 is something of a do over to fix poor
design choices in the 91.

Try here:

http://www.mapleleafcom.com/antacc.htm

Prices are I think $CDN so you would get a bit of a discount as well,
could pay for the shipping :-)

Hope it helps

Has anyone successfully used a Kenwood AT-250 automatic antenna tuner
with a non-Kenwood radio?

Is it simply a matter of grounding pin 3 on the ACC jack, reducing
output to <50 watts, and hitting the "Tune" button?  What about the
pin 8 connection?  What exactly is that?

I have an HP 8551B / 851B spectrum analyzer. It's missing the control
cable that connects the display section to the Rf section. I found the
connectors needed to make the cable but can't find the schematic to the
cable.
So I'm wondering if anyone can confirm if this cable is wired pin to
pin. For example pin 1 on one connector is electrically connected to
pin 1 on the other end etc.. all the way to pin 14? Or do any pins
cross over to another number?

I would appreciate any help. Thanks.

Don

I don't know how much this will help, but I have the manual for the 852A
display section, which was also used on the 8551. It shows pins 1 to 10 are
control lines from the 8551 (-24V), pin 11 as -24V, pin 12 as -15V, pin 13
as +15V and pin 14 as ground. Didn't see anything about the cable itself,
but it's supposed to come with the RF section.

HTH,

-NM

Just picked up one of these, and solved the preamp relay
problem. I'm not getting anything out on transmit, and its
not drawing much current, In SSB and AM, I can see
normal meter deflection when the meter is in ALC mode,
but no RF.

I've heard that these radios are very sensitive to SWR, and
will shut down the finals, and am wondering if this is causing
a problem.

Comments, suggestions?  TIA
                 Steve
p.s.-yes, I tried transmitting into a load, and I am a ham

```

This antenna is, in fact, a system of two Log Periodic antennas. The Mirage/KLM C6-12-8 and the Mirage/KLM 10-30-7. When installed on one tower and fed in series with one 50 ohm feed line, the system becomes the Mirage/KLM C6-30-15-LPA. This scheme offers several advantages. Performance of the system is equal to an antenna with a 76 foot long boom. In addition the two antennas can be mounted on separate towers and/or fed with separate feed lines for even greater flexibility with no loss of performance.

Specifications:

```
   Frequency of operation:           6 to 30 MHZ

   Elements of system:      15

   Element length (Max):         48 feet

   Gain:               5.5 dBd minimum to 8.0 dBd

   Front to back:           15.0 dB typical

   Feed Impedance:          50 ohms unbalanced (Use 4 4:1 Baluns)

   Boom Length:             C6-12-8 = 46 FT.
                   C10-30-7 = 30 FT.

  Turning Radius:           33.0 Ft
```

Asking $500.00

Please e-mail any questions to w2npt@arrl.net THIS ANTENNA SYSTEM IS ON THE GROUND READY FOR PICK UP ONLY IN NORTHERN NEW JERSEY

```

Certainly a waste of my $$$
Most irratating flaw is that the volume knob is always getting
bumped and does not lock in position so often the rig is on
but no sound. You woud THINK after so many years of
making radios they could do a bit better on the interface to
people. Been a real pain in the can. I go for a scoping
next week ... maybe the Dr can remove that pain too. :)

My current HF rig is a Kenwood TS-570S. I'm very satisfied with it, but I have an itch for a spectrum scope. I would like to hear comments from users of spectrum scopes, and recommendations for rigs with spectum scopes. I don't need the ultimate power-user DX rig, but I am willing to pay a premium for the scope feature.

Bob ND9B

I use an Icom Pro III. I didn't try to compare any of the rigs with "band scopes"
but having used real spectrum analyzers I was a bit disappointed that the

band
width (resoloution) was fixed, you could change the range of frequencies the
sweep
would span but there was also no way to change the sweep rate.   To check
any kind
of close signals the indicator is worthless. It is also worthless to check
the
band spread of a signal.   but then you have to pay big bucks for a real
analyzer. It does show the abusers who tune up and dial across the whole
ham band back and forth. Usually the over power limit hams with too much
money for amps and not enough courtesy to be worth working..

IMHO///
I cant say for sure, but I would guess this would be a common short coming
of
all the "band scopes" cost being the factor for doing every thing a real
analyzer does,
They simply don't have the design to see what is shown for example
transmitters with
a spurious signal close to the desired frequency. That is the picture that
is often show
on spec' sheets.

Google   arrl spectrum analyzer display   and wander around to view
any display
examples and most will not be the same as the band scope displays

Good luck

I thought about the problem myself a year or so ago, and spent $400
(more or less) on an SDR-IP Software-Defined Receiver from RFSpace
Inc. It makes a rather nice bandscope and spectrum analyzer, though
I'm limited to 190 KHz max bandwidth. It is nice to be able to see,
say, all the CW portion of 80m or 40m or 17m or whatnot at a time

Not a bad RX in other repects, too.

Hi Bob,
The newer 7800, 7700 and 7600 have variable sweep rates and much better RBW-100Hz on the 7600 I recall.

The best solution is to buy the SDR-IQ and the IF-2000 board and tap off before the PRO NB

The band scope is a pretty cool addition within it's limitations. It
certainly isn't a spectrum analyzer, but then that isn't what it is
designed for. They are handy for seeing activity mostly. The IC-756 III
is a really nice one. The top end rigs with scopes have some more
features, but what a price tag.

We do MW, FM and SW transmitter spare parts.
We also do Sony broadcast equipments spares and Post production
equipments and Radio links etc.

Wasn't Hawaii the 49th state?.
I thought Alaska was the 50th state, but stand corrected if I am mistaken.

Hello,

I am looking for experiences with the Shure 55SH Series II microphone.

It would be nice to hear someone his voice with this microphone. For
example someone in G or DL who is willing to make a contact on 3.6 MHz SSB.

Thanks in advance.

Harold, I have no affiliation with Hexacon... or do I sell their
equipment. However, we do use their equipment... and it has proven to
be much more reliable than Weller stuff. I guess you get what you pay
for. Not surprising I guess.

Harold, I have no affiliation with Hexacon... or do I sell their equipment. However, we do use their equipment... and it has proven to be much more reliable than Weller stuff. I guess you get what you pay for. Not surprising I guess.

I was commenting on your speech compressor not the equipment you use to build it.

If you had read the other posts, some denegrating the Weller company, you would have read a comment of mine that explains my use of Weller products for over 60 years. That includes personal use of several models of their irons as well as the industrial use of Weller irons and guns by my employees in a manufacturing environment. I HAVE used a few other irons, a favorite being the Antex for SMD work. I suspect that, unless you're morbidly obese, I have likely melted more solder pounds than you weigh and am particularly offended, by people offering their unsolicited opinions on subjects they know little about. Go build a compressor. Most of us these days, do it in software with DSP.

 I had a S-38D in the mid 50's.  It was pretty awful - it completly
overloaded so I had no idea where my (crystal controlled Viking
Adventurer) was transmitting and it drifted.   Making a QSO was pretty
hit and miss. It might have some nostalgia value, but not 300 bucks
worth.

Looking at some of your solder joints it shows you don't use a Weller,
perhaps you should?

DX will soon be upon us. This time around I'd like to have a band
scope, without spending thousands of dollars. This so I can see band
activity on a display screen. For this I have not found a solution.

The cheapest solution that I have found is an Icom IC-PCR1500 PC
controlled receiver, for about $500. It would do the job.

My Icom IC-735 HF rig does not have an IF output on the back.

I recall seeing standalone band scopes, but I can't seem to find any now.

Can anyone recommend a solution?

Thanks for your help.

I thought I was the only one to notice the over-cooked solder blobs. I do better than that w/ lead-free solder on Rogers PCBs w/ my Weller solder station. But then, I've been doing it for decades. And, while some other brands have failed us repeatedly, I've seen only ONE Weller station have to be tossed out. The way I see it, they're relatively inexpensive AND they last.

Hi Bruce,

I've been using a Heath SB-620 "Scanalyzer" for about 20 years (Yaesu made a similar unit, the rare YO-901 w/ bandscope option). The Heath units can be found for around $100. I used mine with a Heath SB102, and now with a Kenwood TS-130S. My SB620 came built for the Heathkit IF of 3395KHz (I didn't get the parts for other IFs). When I ran the SB102, that wasn't a concern. But, when I switched to the TS120S (and now TS130S) with their 8830 KHz IF, I needed to come up with a way to make it work. The first was to tap off the rig's IF at the mixer (before the crystal filter) w/ a simple buffer amplifier, and feed it to the ACC socket via some small RG174 coaxial cable.

In looking at the input amplifier of the SB620, I saw that it could be configured as a mixer with the flip of a switch. I would need to supply a signal to mix with the IF signal from the rig (e.g.: 3.395 + 8.83 = 12.225 MHz). I built an oscillator (dead-bug style) using a crystal meant for an old 2M rig (146.76 / 12 = 12.23 MHz), plugged it in to the SB620, and tweaked the 620's sweep oscillator inductor just a tad. Voila!

The first thing I noticed was the difference in how far I could sweep. With the SB102 et al, you have a preselector which limits the bandwidth you'll see at the mixer output. About �50 KHz was the extent of the response. However, with the TS-120/130, there's a bandpass filter at the frontend. I can sweep the entire band. The limiting factor is the width of the CRT... the blips become VERY close together. hi!

According to the service manual, your '735 has a 2nd IF of 9.0106 MHz, and you'd pick off the signal at the output of the 2nd mixer on the 'Main Unit', ahead of the IF filter(s). Short of having a standalone spectrum analyzer or receiver w/ Panoramic Display, this is your best bet.

vy 73,
Bryan WA7PRC

Hi,

New to the Group and it looks like there is a great deal of information
here!

I recently purchased a Sony SW-7600GR and am stunned by it's ability to
pull in stations. I have some questions though and would appreciate any
input; I've looked in the manual and have come up short.

(1) On Page 7 of the manual it shows both MHz and kHz (Item #10),
implying that one can select a preference. Yet I see no other mention
of it.

(2) Is it possible to set the local time of day and concurrently set UTC? It seems that by default as you set your local time the UTC is adjusted. My UTC offset should in fact be +5 from local time, yet the radio will not set as such.

(3) With the antenna fully extended, there is substantial play on a horizontal axis. That is to say, if you fully extend the antenna and move it along a horizontal plane of left to right (or vice-versa) it will have a good six inches or so of play. I was wondering if this is normal or if something's loose where the antenna enters the radio.

(4) Is there a way to reset the radio back to it's factory defaults?

Thank you.

I didn't realize so many people who work at Weller frequent this
group... lol

I can't speak for others but, I don't work for any soldering equipment
manufacturer. Nor, do I sell any soldering equipment. And, no one I know
does.

More likely you are reading something into it that isn't there.

1MHz = 1000KHz
```

So when you have a receiver that reads to 1KHz, then the real
difference is where the decimal point is.

10.000 MHz = 10,000 KHz

There's no need to switch because they are the same numbers.

That's probably so you can orient the antenna. Certainly the Grundig
Satellits have a mechanism for swiveling the antenna around when it's
fully extended.

You sure are sensitive. All I did was give my personal opinion of Weller... just as you did. I happen to think they stink. Since you got so riled about my honest review... I'll just assume that you know that weller is cheap crap... and you're just mad because you bought one. Plonk yourself... lol

Well, this newsgroup (rec.radio.amateur.misc) does not generate
much content either...  after filtering out the lunatic that posts
messages consisting only of quoted text, of course.

Send Ten-Tec a copy of your MARS license and they'll send you the
modification.

I'd prefer a modern SDR radio, as opposed to the old analog ICOM, if I
wanted a panoramic display. This also costs $500, and it's a better HF
receiver and has a much better spectrum display.

Bullshit, he just got out of jail again for driving without a license, and
he was found indigent again for the sixth time in six years!

Poor dougay has no money, no job, no lfe. Too bad YOU have to support the pathetic criminal drunken loser eh, KC8QJP?

Greetings,

I have been considering putting my 545 up for sale for some time because I don't use it much any longer . The radio is in excellent condition (a minor scratch towards the back of the top cover is the only blemish which does not detract from its visual appearance) and it includes a fully functional CHE-199 VHF/UHF wideband converter (no "mute" problem as described by others with this model of radio). There are no gaps in the frequency coverage of the CHE-199 so the radio tunes continously from 100 kHz up to 1999.999 MHz. I will also include the original Instruction Manual, the 138 page Service Manual, and the original box for the radio. I also installed a TCXO option which improves the frequency stability to +/- 0.5PPM. The serial number of the radio is RG##773 which I purchased it new in July 2001 from Universal Radio. It has been well cared for in a non-smoking environment. This radio with these options sold for over $2100 new however I am willing to part for $1600 + shipping.   I can guarantee the radio works 100%. The variable bandwidth control and variable AGC makes the radio a dream to operate as this is the finest SSB radio I have ever used. I can send you pictures if you are interested.

Sincerely,
Bruce KC0WRI

I'm looking for a dead HP848x (e.g. HP8482A or similar) RF power
sensor head to rescue from the trash.  All I need is the connector
(the one to the cable to the readout box)--don't care about any of the
rest of it.  Anyone?

Cheers,
Tom

Cool amp.  Book is available on-line.  Easy to rewire 240 or 120.  Need to
change cord and fuses and taps on transformer.  Always check cathode
resistors for proper value and bias filter cap before firing up a strange
one.

What is that connector?  As I recall, this stuff mostly used standard
military-style KPT connectors.  If you have a number on it, someone may
have a match.

Thanks for the idea, Scott, but no, they have no spline keying.  The
locking ring is threaded, with male threads on the plug on the cable.
I suppose I can get a part number, but suspect if I can even find
someplace that will sell me just one, it will be considerably more
than the cost of shipping a dead unit that someone was going to toss
anyway.

Cheers,
Tom

Like an A&N connector?

Could be, or could be someone has a box in their basement.

Well, I'm not familiar with A&N connectors, but I gather A&N deals
pretty exclusively in high vacuum stuff. These connectors aren't
sealed. I'll see if I can come up with a manufacturer and part number
tomorrow.

Doesn't everyone with a basement have a box or two in it? ;-)

```
Cheers,
Tom

Tnx dloydlav for changing the title back.
Why anyone wud want to change it is beyond me?
Why cannot they start thier own thread?

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Greetings,

My family has several kenwood th25at with bad backup battery. Please
reply with any information about
how to find and replace the battery or where to get information to
replace the battery.

Thank you,
Bill WB0ALN

I have a JRC NRD 525 with less than 50 hours use, and I'm thinking of
selling it. How can I determine its value and what are some good places to
try to sell it. I may not be able to use eBay because I don't use Paypal.

Oh good. Let's play 50 questions. Answer: Hawaii.

Your turn--two questions:

1. What is the airspeed velocity of an unladen swallow?

2. What does Hawaii have to do with my question?

Hawaii, the Fiftieth State, the Golden Gem of the Pacific.  The people
of Hawaii bid you welcome!  Hawaii Calls!  From Hawaii's sunny shore onto
the great briny sea, at the Moana hotel facing the beach of Waikiki we
found the music of the islands..

Hi, i have an Icom IC725 HF radio. Can't seem to get the remote CI-V talking. Aparrently there should be between 5 and 1 volt variation (i think) from that socket when you spin the VFO and or change bands. I have checked the diode matrrix and settings to death, i DO get a small voltage variation on the socket but nothing like it should be. I'm trying to get HRD set up on it but no luck. Have posted in the forums there a while ago and got step by step help but nothing i had not already done. Any help appreciated...

Thanks You

Gary

Hi to all of you,

I'm searching the EATON 2075B NF meter service manual.
If you have these pdf or printed please let me know, I need to calibrate my
2075B.
I own the 2075A service manual but it's a different hardware, so almost
useless as the calibration is different.
Many thanks for your replies.

All the best

pf, F5BQP
